Section I Overview of Microbial Diversity

1. Methods of Assessment of Microbial Diversity in Natural Environments

Anwesha Ghosh and Punyasloke Bhadury

1.1 Introduction	3
1.2 Analysis of Microbial Communities Based on Cultured Approaches	4
1.3 Culture-Independent Techniques	4
1.3.1 Clone Library and Sequencing Approach	5
1.3.2 Terminal Restriction Fragment Length Polymorphism	6
1.3.3 Denaturing Gradient Gel Electrophoresis	6
1.3.4 Fluorescence In Situ Hybridization	7
1.4 Next-Generation Sequencing (NGS) or High-Throughput Sequencing (HTS)	8
1.4.1 Pyrosequencing	8
1.4.2 Illumina HiSeq and MiSeq Sequencing	9
1.4.3 Next-Generation Sequencing Data Processing	9
1.4.4 Third-Generation Sequencers	10
1.5 Integrating Culture and Molecular Techniques in Understanding Microbial Community Structure and Diversity	11
1.6 Conclusion	11
References	11
Further Reading	14

2. Metagenomic Achievements in Microbial Diversity Determination in Croplands: A Review

Agnieszka Wolińska

2.1 Introduction	15
2.2 Metagenomic Techniques Useful in the Soil Biodiversity Determination	17
2.3 The Microbiome of Croplands and Wastelands	18
2.4 Factors Influencing on Microbial Diversity	20
2.4.1 Soil Acidity (pH)	22
2.4.2 Redox Potential (Eh)	22
2.4.3 Carbon Content	22
2.4.4 Fertilizers and Pesticides	23
2.4.5 Crop Rotation	24
2.5 Indicators of Biological Degradation Phenomenon	24
2.5.1 Microbial Communities	26
2.5.2 Soil Respiration Activity	26
2.5.3 Microbial Biomass	26
2.5.4 Soil Enzymes	27
2.6 Land Management Methods and Their Impact on Microbial Community	27
2.6.1 Organic Farming System	27
2.6.2 Conventional Farming System	28
2.7 Summary and Future Perspectives	29
Acknowledgments	29
References	29

3. Genomic Diversity and Evolution of Rhizobia

*Alice Checcucci, George C. diCenzo,
Elena Perrin, Marco Bazzicalupo
and Alessio Mengoni*

3.1 Rhizobia as Keystones of the Plant Microbiome	37
3.2 The Expanding "Clan" of Rhizobia	38

3.3 Rhizobia Have a Fluid Genome Organization	40	5.7 Conclusion	74
3.4 Genomic Architecture of Symbiotic Features in Rhizobia	40	References	74
3.5 <i>Sinorhizobium meliloti</i> : A Case Study in α -Rhizobia Multipartite Genome Evolution	41	Section II	
3.6 <i>Burkholderia/Cupriaviruses</i> : New Frontiers in β -Rhizobia Studies	42	Molecular Tools in Microbial Diversity	
Acknowledgments	43	6. Analyzing Functional Microbial Diversity: An Overview of Techniques	
References	43	<i>Nidhi Srivastava, Bhumika Gupta, Sanjay Gupta, Michael K. Danquah and Indira P. Sarethy</i>	
4. Microbial Biodiversity Study of a Brackish Water Ecosystem in Eastern India: The Chilika Lake		6.1 Introduction	79
<i>Vishakha Raina, Ananta N. Panda, Samir R. Mishra, Tanmaya Nayak and Mrutyunjay Suar</i>		6.2 Assessment of Microbial Diversity	80
4.1 Introduction	47	6.2.1 Taxonomic Diversity	80
4.2 The Microbial Perspective	47	6.2.2 Functional Diversity	82
4.3 Chilika Lake, a Reservoir for Bioprospecting Bacteria for Industrially Important Enzymes	48	6.3 Culture-Dependent Methods to Assess Microbial and Functional Diversity	83
4.4 Microbial Diversity Assessment of Chilika Lake	49	6.3.1 Conventional and Biochemical Approaches	83
4.4.1 Culture-Dependent Assessment of Microbes in Chilika Lake	50	6.4 Culture-Independent Methods to Assess Microbial and Functional Diversity	90
4.4.2 Culture-Independent Assessment of Microbial Diversity of Chilika Lake	54	6.4.1 Metagenomics	91
4.5 Conclusion and Future Perspectives	60	6.4.2 Metatranscriptomics	93
References	61	6.4.3 Metaproteomics	94
Further Reading	63	6.4.4 Proteogenomics	95
5. Microbial Diversity and Community Analysis of the Sundarbans Mangrove, a World Heritage Site		6.4.5 Advantages and Limitation of the "Omics" Approaches	96
<i>Arnab Pramanik, Sohan Sengupta and Maitree Bhattacharyya</i>		6.5 Conclusions	96
5.1 Introduction	65	Acknowledgments	97
5.2 Mangrove Ecosystem	65	Conflict of Interest	97
5.3 The Sundarbans Mangrove, a World Heritage Site	66	References	97
5.4 Functional Attributes of Microbial Community Toward the Sustainability of the Mangrove Ecosystem	67	URLs	102
5.5 Methodology to Monitor and Estimate Microbial Communities in Mangroves	67	7. Genetic Analysis of the Bacterioplankton Biology and Ecology Through Next-Generation High-Throughput Molecular Techniques	
5.6 Exploration of Microbial Communities in the Sundarbans Soil Sediments: Culture Dependent and Independent Techniques	68	<i>Gurdeep Rastogi, Pratiksha Behera and Madhusmita Mohapatra</i>	
5.6.1 Culture Dependent Studies	68	7.1 Introduction	103
5.6.2 Culture Independent Study	71	7.2 Limitations of "First-Generation" Molecular Techniques	104
		7.3 Estuarine Bacterioplankton Communities: What Did We Learn So Far	105
		7.3.1 Estuarine Bacterial Communities Exhibit Distinct Spatial Patterns that are Mostly Correlated with Salinity and Depth	106

7.3.2	Estuarine Bacterial Communities are Mixture of Freshwater and Marine Water Communities	107	9.2	Bacterial Classification: Polyphasic Approach	138
7.3.3	Bacterioplankton Communities Do Exhibit Recurrent Temporal Patterns	107	9.2.1	Genotypic Methods	138
7.3.4	Bacterioplankton Communities are Driven by Biotic and Abiotic Drivers	108	9.2.2	Phenotypic Methods	141
7.4	Integrating "Omics" Technology for Profiling the Bacterioplankton Communities	109	9.3	Problems Faced in Bacterial Polyphasic Taxonomy	143
7.5	Summary and Outlook	112	9.4	Genomics in Microbial Taxonomy	144
References		113	9.4.1	Multilocus Sequence Analysis (MLSA)	144
			9.4.2	Overall Genome Relatedness Indices	145
8.	Molecular Tools in Microbial Diversity: Functional Assessment Tool for Genomes and Metagenomes, MAPLE System		9.5	Pros and Cons of Microbial Genomic Taxonomy	146
	<i>Hideto Takami</i>		9.6	Future Perspectives of Polyphasic Taxonomy: Culturomics and Taxonogenomics	147
8.1	Introduction	117	9.7	Conclusion	148
8.2	Development of a New Method for Evaluating the Potential Functionome	118	References		148
8.2.1	KEGG Module	118	Further Reading		152
8.2.2	Calculation of the Module Completion Ratio Based on the Boolean Algebra-Like Equation	118	10.	Biochemical Strategies to Counter Nitrosative Stress: Nanofactories for Value-Added Products	
8.2.3	Assignment of KO IDs to the Query Sequences	119		<i>Azhar Alhasawi, Félix Legendre, Sasikumar Jagadeesan, Varun Appanna and Vasu Appanna</i>	
8.2.4	Distribution Patterns of the Module Completion Ratio for 2367 Prokaryotes	121	10.1	Introduction	153
8.2.5	Evaluation of the Module Completion Ratio According to Q-Value	124	10.2	RNS in the Environment	154
8.2.6	Calculation of Module Abundance	127	10.3	RNS: The Doubled-Edge Sword—Useful and Toxic	154
8.2.7	Microbial Community Structure Based on Ribosomal Proteins	128	10.3.1	How RNS are Generated in Biological Systems?	154
8.3	Overview of the MAPLE System	130	10.3.2	How RNS Affect Essential Biomolecules?	156
8.4	User's Guide for MAPLE Version 2.3.0	130	10.3.3	Adaptation to RNS Stress	158
8.4.1	Data Submission	130	10.3.4	Nonenzymatic Detoxification	158
8.4.2	Results Pages	132	10.3.5	Enzymatic Detoxification	159
8.4.3	Comparison of Results	134	10.4	Metabolic Reconfiguration to Counter RNS: ATP Homeostasis	160
8.5	Conclusion and Future Prospects	135	10.5	Metabolic Networks to Enhance Antioxidant Production and Limit Oxidant Generation	161
Acknowledgments		135	10.6	Transcriptomic and Genomic Manipulation During RNS Toxicity	163
References		136	10.7	Biotechnological Applications of RNS-Adapted Microbes	164
9.	A Polyphasic Taxonomic Approach for Designation and Description of Novel Microbial Species		10.8	Conclusions	165
	<i>Vishakha Raina, Tanmaya Nayak, Lopamudra Ray, Khushbu Kumari and Mrutyunjay Suar</i>		Acknowledgments		166
9.1	Introduction	137	References		166
			Further Reading		169

11. Exploring Microbial Diversity and Function in Petroleum Hydrocarbon Associated Environments Through Omics Approaches

Siddhartha Pal, Ajoy Roy and Sufia K. Kazy

11.1 Introduction	171
11.2 Traditional Methods of Microbial Diversity Analysis	172
11.3 New Frontiers: Omics Approaches in Microbial Ecology	176
11.3.1 Genomics and Metagenomics	179
11.3.2 Transcriptomics and Metatranscriptomics	183
11.3.3 Proteomics and Metaproteomics	184
11.4 Diversity of Functional Genes From Hydrocarbon-Impacted Regions	184
11.5 Conclusions	185
References	186
Further Reading	194

Section III

Extremophilic Microbial Diversity

12. Diversity of Psychrophilic Bacteria in Sea and Glacier Ice Environments—Insights Through Genomics, Metagenomics, and Proteomics Approaches

Karen Junge, Karen Cameron and Brook Nunn

12.1 Introduction	197
12.2 Psychrophiles in Sea Ice	201
12.2.1 Ecological Aspects	201
12.2.2 Phylogenetic Diversity	202
12.2.3 Insights From Genomics and Proteomics Studies	203
12.3 Psychrophiles in Glacial Ice: A Case Study of the West Coast of Greenland	208
12.3.1 Ecological Aspects	208
12.3.2 Phylogenetic Diversity	210
12.3.3 Insights From Metagenomics and Proteomics Studies	210
12.4 Conclusion	212
References	212
Further Reading	216

13. Microbial Diversity of Thermophiles Through the Lens of Next Generation Sequencing

Amrita K. Panda, Satpal S. Bisht, Surajit De Mandal and N. Senthil Kumar

13.1 Introduction	217
-------------------	-----

13.2 Microbial Diversity	217
13.2.1 The Earth Microbiome Project	218
13.2.2 Thermophilic Diversity	218
13.3 Diversity Analysis of Thermophilic Microbes	219
13.3.1 Culture-Dependent Studies	219
13.3.2 Cultivation, Isolation and Morphological Characterization of Thermophilic Bacteria	219
13.3.3 Partial 16S rRNA Gene Sequencing and Culture-Independent Studies	219
13.3.4 Shotgun Metagenome and Culture-Independent Study	220
13.3.5 Sequencing Platforms for Metagenomics Studies	221
13.3.6 Recent Advances in Microbial Diversity Analysis	222
13.3.7 Next-Generation Sequencing Applications for Understanding Thermophilic Diversity	224
13.3.8 Closing Remark	224
References	224

14. Microbial Ecology in Extreme Acidic Environments: Use of Molecular Tools

Elena González-Toril and Ángeles Aguilera

14.1 Introduction	227
14.2 Extreme Acidic Environments	228
14.3 Microbial Diversity in Acidic Environments	229
14.3.1 Prokaryotic Microbial Diversity	230
14.3.2 Eukaryotic Microbial Diversity	231
14.4 Eukaryotic Acidophilic Genomic Studies	233
14.4.1 Genomes	233
14.4.2 Transcriptomes	234
14.5 Conclusions and Future Perspectives	235
Acknowledgments	235
References	235
Further Reading	238

15. Alkaliphiles: Diversity and Bioprospection

Snehal Kulkarni, Kusum Dhakar and Amaraja Joshi

15.1 Introduction	239
15.2 Alkaline Environments	239
15.2.1 Low Ca^{2+} Environments Including Soda Lakes and Deserts	240
15.2.2 Genesis of Soda Lake Environment	240
15.2.3 High Ca^{2+} Environments	240

15.3 Habitats of Alkaliphiles	241	17.1.1 Hypersaline Environments	285
15.3.1 Kenyan Tanzanian Rift Valley Soda Lakes	241	17.1.2 Overview of Haloarchaea	285
15.3.2 Wadi Natrun Lakes, Egypt	241	17.1.3 Characteristics of Haloarchaea	286
15.3.3 Saline Qinghai Lake, China	241	17.1.4 Diversity of <i>Halobacterium</i> Isolates	287
15.3.4 Soda Lakes of Kulunda Steppe, Altai, Russia	242	17.1.5 The <i>Halobacterium</i> sp. NRC-1 Genome	288
15.3.5 Mono Lake, California, USA	242	17.1.6 Advances in Haloarchaeal Genome Sequencing	288
15.3.6 Soda Lakes of India	243	17.2 Comparative Genomics of <i>Halobacterium</i> Strains	289
15.4 Adaptation Strategies of Alkaliphiles	244	17.2.1 Alignment of the <i>Halobacterium</i> sp. NRC-1 and R-1 Chromosomes	292
15.5 Microbial Diversity	246	17.2.2 Chromosomal Indels	292
15.5.1 Aerobic Alkaliphilic Diversity	247	17.2.3 Chromosomal Single-Nucleotide Polymorphisms	297
15.5.2 Anaerobic Alkaliphilic Diversity	247	17.2.4 Alignment of Plasmids	298
15.5.3 Methanogenic Diversity	248	17.2.5 Conservation of NRC-1 and R-1 Plasmid Sequences in 18 <i>Halobacterium</i> Strains	301
15.5.4 Haloalkaliphilic Archaeal Diversity	248	17.2.6 Insertions and Deletions in Plasmids	307
15.5.5 Chemolithotrophic Diversity	249	17.2.7 Single-Nucleotide Polymorphisms in Plasmids	308
15.5.6 Phototrophic Bacterial Diversity	249	17.3 Discussion	317
15.6 Phylogenetic Diversity of Alkaliphiles	251	17.4 Conclusions and Future Prospects	319
15.7 Bioprospection of Alkaliphiles	253	References	319
15.7.1 Case Study	254		
15.8 Conclusion	256		
Acknowledgments	256		
References	256		
Further Reading	263		
16. Cyanobacteria From Brazilian Extreme Environments: Toward Functional Exploitation		18. Microbial Community Dynamics of Extremophiles/Extreme Environment	
<i>Diego B. Genuário, Marcelo G.M.V. Vaz, Suikinai N. Santos, Vanessa N. Kavamura and Itamar S. Melo</i>		<i>Prachi Singh, Kunal Jain, Chirayu Desai, Onkar Tiwari and Datta Madamwar</i>	
16.1 Introduction	265	18.1 Introduction	323
16.2 Extremophilic Microorganisms	266	18.2 Overview of Microbial Diversity at Different Extreme Environments	324
16.3 Brazilian Extreme Environments	267	18.3 Methods for Studying the Extremophiles	325
16.3.1 Brazilian Biomes: Extreme Peculiarities and Cyanobacterial Diversity	267	18.4 Overview of the Survival Mechanisms of Extremophiles	325
16.4 Biotechnological Potential of Cyanobacteria from Brazilian Extreme Environments	276	18.5 Microbial Community Dynamics	326
16.4.1 Amazon Rainforest	276	18.5.1 Halophiles	326
16.4.2 Caatinga	277	18.5.2 Psychrophiles	327
16.4.3 Pantanal Wetlands	278	18.6 Acid Mine Drainage	328
16.4.4 Mangroves	278	18.7 Biotechnological/Commercial Applications of Extremophiles/Extremozymes	328
16.5 Future Perspective	279	18.8 Conclusion	329
References	279	Acknowledgment	329
Further Reading	284	References	329
17. Comparative Genomics of <i>Halobacterium</i> Strains From Diverse Locations		19. Opening the Black Box of Thermophilic Autotrophic Bacterial Diversity	
<i>Priya DasSarma, Melinda D. Capes and Shiladitya DasSarma</i>		<i>Yuri Pinheiro Alves de Souza and Alexandre Soares Rosado</i>	
17.1 Introduction	285	19.1 Introduction	333

19.2 Overview of Carbon Fixation Pathways	333
19.2.1 The Calvin–Benson Cycle	333
19.2.2 Arnon–Buchanan Cycle	334
19.2.3 The Wood–Ljungdahl Pathway	334
19.2.4 The Fuchs–Holo Pathway	335
19.2.5 3-Hydroxypropionate/4-Hydroxybutyrate Cycle	336
19.2.6 Dicarboxylate/4-Hydroxybutyrate Cycle	337
19.2.7 Reductive Hexulose-Phosphate Pathway	337
19.3 Carbon Fixation in Thermophiles	337
19.4 Accessing the Autotrophic Diversity	337
19.4.1 Taxonomic and Functional Metagenomics	338
19.4.2 Isolation-Based Approaches	339
19.5 Biotechnological Importance	339
References	340
Further Reading	343

Section IV

Functional Microbial Diversity

20. Functional Microbial Diversity in Context to Agriculture

Anna Gałazka and Karolina Furtak

20.1 Introduction	347
20.2 Human Activity and Microbial Diversity	347
20.3 Biolog EcoPlate Method	347
20.3.1 The Principle of the Biolog Method	348
20.3.2 EcoPlate	348
20.4 Assessment of the Metabolic Diversity of Microorganisms According to EcoPlate as an Indicators of Soil Quality on Example of Representative Soils of Poland	351
20.4.1 Research Aim and Material	351
20.4.2 Methods	352
20.4.3 Results	353
20.5 Conclusion	355
Acknowledgments	357
References	357
Further Reading	358

21. Functional Microbial Diversity in Contaminated Environment and Application in Bioremediation

Satyanarayan Panigrahi, Parthiban Velraj and Toleti Subba Rao

21.1 Introduction	359
21.2 Microbial Community Profiling	360

21.2.1 Clone Library Method	360
21.2.2 Genetic Fingerprinting Techniques	362
21.3 Functional Microbial Diversity	369
21.3.1 DNA Microarrays	369
21.3.2 Quantitative Polymerase Chain Reaction	371
21.3.3 Microbial Lipid Analysis	373
21.3.4 Fluorescence In Situ Hybridization	374
21.3.5 Stable Isotope Probing	375
21.4 Postgenomic Application	376
21.4.1 Metagenomics	376
21.4.2 Metatranscriptomics	376
21.4.3 Metaproteomics	377
21.4.4 Metabolomics	378
21.5 Functional Microbial Diversity and Bioremediation	378
21.6 Conclusion	379
References	379
Further Reading	385

22. Structural and Functional Diversity of Microbial Metallothionein Genes

Juan-Carlos Gutiérrez, Patricia de Francisco, Francisco Amaro, Silvia Díaz and Ana Martín-González

22.1 Introduction: Metallothionein Concept	387
22.2 Structural Diversity: Variations on the Same Topic	389
22.2.1 Bacterial Metallothioneins	389
22.2.2 Fungal Metallothioneins (Yeasts and Filamentous Fungi)	393
22.2.3 Protist Metallothioneins	397
22.3 Metallothionein Gene Expression: Functional Diversity	402
22.4 Biotechnological Applications of Metallothionein Genes	404
22.5 Summary and Concluding Remarks	404
References	405

23. Functional Diversity of Bacterial Strategies to Cope With Metal Toxicity

Sébastien Gillet, Emeline Lawarée and Jean-Yves Matroule

23.1 The Metals	409
23.1.1 Metals Classification	409
23.1.2 Metals and Bacteria—Coexisting for Better or Worse	409
23.2 Metal-Dedicated Resistance Systems	411
23.2.1 Extracellular Space—Dealing With an Invasive Friend	411

23.2.2 Intracellular Space—Keeping the Place Safe	412	24.4.5 Diversity of Metabolic and Physiological Potential	439
23.3 Metal Resistance Associated with Phenotypic Plasticity	417	24.5 Biodiversity of Marine Samples Revealed by Functional Metagenomics	440
23.3.1 Biofilm	417	24.5.1 Microbial Community Structure of GOS Sites Based on Ribosome Proteins	440
23.3.2 Persister Cells	417	24.5.2 Discrimination of GOS Sites by Differences in Module Abundance	441
23.3.3 Bet-Hedging	418	24.5.3 Biodiversity of Contributors to Module Abundance	441
23.3.4 Sporulation	418	24.6 Biodiversity of Human Gut Microbiome Revealed by Metagenomics	441
23.3.5 Fructification	419	24.6.1 Comparative Functionome Analysis of Humans and Human Gut Microbiomes	442
23.4 Case Study: <i>Caulobacter crescentus</i> Bimodal Strategy	419	24.6.2 Biodiversity of the Glycolysis Module Among the 13 Individuals	444
23.4.1 <i>Caulobacter crescentus</i> Cell Cycle	419	24.7 Conclusion and Future Prospects	445
23.4.2 SW Cell Defense Strategy Against Cu	419	Acknowledgments	446
23.4.3 Cu Detoxification by the ST Cell-Specific PcoAB System	420	References	446
23.5 Conclusion	420		
References	421		
24. Functional Microbial Diversity: Functional Genomics and Metagenomics Using MAPLE			
<i>Hideto Takami</i>			
24.1 Introduction	427	25. Linking the Environmental Microbial Diversity and Antibiotic Resistance	
24.2 Functional Classification of Uncultivated Archaea Within <i>Aigarchaeota</i>	428	<i>Juliana C. Pinheiro, Lays T. dos Santos, Isabel Henriques, Artur Silva and Rafael A. Baraúna</i>	
24.2.1 Phylogenetic Position of "Ca. C. subterraneum" Among Archaea	428	25.1 Introduction	451
24.2.2 Functional Classification of Archaea Based on the MCR Patterns	428	25.2 Microbial Diversity in Amazonian Environments	452
24.2.3 PCA Based on the Archaeal MCR Patterns	430	25.3 Environmental Antibiotic Resistance: Why is it a Public Health Concern?	453
24.3 Metabolic and Physiological Potential of "Ca. C. subterraneum" Deduced by MAPLE Analysis	431	25.4 Case Study: β -Lactams Resistance in <i>E. coli</i> Strains Isolated From Lake Água Preta, Brazilian Amazon	453
24.3.1 Carbon Fixation Potential	431	25.5 Conclusions	455
24.3.2 Glycolysis and Gluconeogenesis	432	References	456
24.3.3 TCA Cycle	434	Further Reading	457
24.3.4 Possible Lifestyle Deduced by Metabolic and Physiological Features	434		
24.4 Functional Diversity of <i>Lysobacter</i> Species Producing Antimicrobial Enzymes	435	26. Applications of Metagenomics in Microbial Bioremediation of Pollutants: From Genomics to Environmental Cleanup	
24.4.1 Core Genome Structure of Genus <i>Lysobacter</i>	436	<i>Ram N. Bharagava, Diane Purchase, Gaurav Saxena and Sikandar I. Mulla</i>	
24.4.2 Diversity of Bacteriolytic Enzymes	437	26.1 Introduction	459
24.4.3 Diversity of Lytic Enzymes Against Eukaryotic Cells	438	26.2 Conventional Gene Sequencing Technologies	460
24.4.4 Diversity of Natural Products	438	26.2.1 Polymerase Chain Reaction	460
		26.2.2 Fluorescence <i>In Situ</i> Hybridization	462
		26.2.3 Microbial Community Profiling	462

26.3 Metagenomics: A Genomic Drift	465	29. Exploring Human Bacterial Diversity Toward Prevention of Infectious Disease and Health Promotion	
26.4 Metagenomics Approaches	465	<i>Basit Yousuf and Avinash Mishra</i>	
26.4.1 Metatranscriptomics	465	29.1 Introduction	519
26.4.2 Metaproteomics	466	29.2 Insights on Distinctive Microbiomes Outside and Inside of the Human Body	520
26.4.3 Metabolomics	466	29.2.1 Skin Microbiome	520
26.4.4 Fluxomics	466	29.2.2 Oral Microbiome	521
26.4.5 Next-Generation Sequencing (NGS) Technologies	466	29.2.3 Gut Microbiome	522
26.5 Workflow of Metagenomics	469	29.2.4 Vaginal Microbiome	523
26.6 Applications of Metagenomics in Bioremediation of Environmental Pollutants	470	29.2.5 Lung Microbiome	524
26.7 Computational and Bioinformatics Tools for Metagenomic Data Analysis	471	29.3 Molecular Tools for Characterization of Microbiomes	524
26.8 Challenges and Prospects	471	29.4 Potential Therapeutics for Imbalanced Microbiome Linked Diseases and Overcoming Antibiotic Resistance	525
26.9 Conclusions	473	29.4.1 Quorum Sensing Inhibitors	525
Acknowledgments	473	29.4.2 Probiotics	526
References	473	29.4.3 Fecal Microbiota Transplantation	526
Further Reading	477	29.5 Conclusion and Prospects	527
		Acknowledgment	527
		References	527
		Further Reading	533
Section V		30. Rapid Diagnosis of Septicemia in Adults by Microscopic Screening of WBC Cells: A Prospective Evaluation	
Microbial Diversity and Infectious Diseases		<i>Shabana Bano, Anirban Mukherjee, Manjila Gupta, Sourav Ghosh, Madhusmita Mishra and Shaon Ray Chaudhuri</i>	
27. Molecular Techniques for Diagnosis of Bacterial Plant Pathogens		30.1 Introduction	535
<i>Sakshi Tewari and Shilpi Sharma</i>		30.2 Blood Fungi Infection: In Vitro	536
27.1 Introduction	481	30.3 Blood Anticoagulant Interaction	538
27.2 Detection and Diagnosis of Bacterial Pathogens	482	30.4 Blood Bacterial Infection: In Vitro	539
27.2.1 Conventional Microbiological Approaches	482	30.5 Effect of Age and Gender on WBC Dimension	539
27.2.2 Molecular Approaches	483	30.6 Blood Bacterial Infection: In Vivo	539
27.2.3 Immunodiagnostic Approaches	488	30.7 Conclusion and Future Prospects	542
27.2.4 Nanodiagnostic Approaches	489	Acknowledgments	542
27.3 Conclusion and Future Prospects	492	References	542
Acknowledgments	492		
References	493	31. Prevalence of Multidrug Resistance Efflux Pumps (MDREPs) in Environmental Communities	
28. Molecular Techniques for the Study of Microbial Diversity with Special Emphasis on Drug Resistant Microbes		<i>Damon Brown, Marc Demeter and Raymond J. Turner</i>	
<i>Samya Sen and Keka Sarkar</i>		31.1 Multidrug Resistance Superfamilies	545
28.1 Introduction	499	31.1.1 Small Multidrug Resistance	546
28.2 Techniques	501		
28.2.1 PCR-Based Methods	501		
28.2.2 PCR-Independent Techniques	511		
28.3 Conclusion	514		
References	514		

33.3.2 Metabolic Processes in Extremophiles Present in Reservoir Environments	598	34.7 Next-Generation Sequencing: Applications for Microbial Diversity Analysis in Diverse Fields	625
33.3.3 Biotechnological Applications of Petroleum Reservoir Microbiome	600	34.7.1 Agriculture	625
33.4 Challenges of Extremophile Study in the Era of Genomics	600	34.7.2 Medicine (Diagnostics and Drug Discovery)	625

Further Reading	610	34.7.4 Environmental Issues	626
		34.7.5 Industrial Applications of Microbial Diversity and NGS	626
		34.7.6 Forensics	626
		34.7.7 The Related Avenues	626
34. The Role and Future Possibilities of Next-Generation Sequencing in Studying Microbial Diversity		34.8 Third-Generation Sequencing	627
<i>Vijay Nema</i>		34.8.1 Pacific Biosciences, Inc. SMRT (Single-Molecule Real-Time) DNA Sequencing Method	627
34.1 Introduction	611	34.8.2 Life Technologies FRET Sequencing Platform	627
34.2 Why Knowing Microbial Diversity is Important	611	34.8.3 The Oxford Nanopore Sequencing	627
34.2.1 Microbial Diversity in Environmental and Agricultural Studies	612	34.9 Summary	628
34.2.2 Microbial Diversity in Industrial Applications	612	References	628
34.2.3 Microbial Diversity in Health Systems	612		
34.2.4 Other Areas	613	35. Taxonomical Diversity of Extremophiles in the Deep Biosphere	
34.3 The Conventional Tools to Study Microbial Diversity	613	<i>Tanvi Govil, Navanietha K. Rathinam, David R. Salem and Rajesh K. Sani</i>	
34.3.1 DNA Reassociation	613	35.1 Introduction	631
34.3.2 Nucleic Acid Hybridization	614	35.2 What is the Limit of Life in Subsurface?	631
34.3.3 Restriction Fragment Length Polymorphism	614	35.3 Factors Challenging Subsurface Life	633
34.3.4 DNA Microarrays	615	35.3.1 Temperature	633
34.3.5 Denaturant Gradient Gel Electrophoresis/Temperature Gradient Gel Electrophoresis	615	35.3.2 Energy	634
34.3.6 Single Strand Conformation Polymorphism	616	35.3.3 Oxygen	637
34.3.7 Metagenomic Analysis of Microbial Communities	616	35.3.4 Void Space	637
34.3.8 Sequencing Onwards	617	35.3.5 Pressure	637
34.4 How Conserved are the Conserved Regions—16S, 18S, 5S vs WGS	618	35.4 Types of Microorganisms and Microbial Activities in Deep Subsurface Environments	638
34.5 Next-Generation Sequencing: A Step Further to Sanger Sequencing	619	35.4.1 Aerobic Respiration	638
34.5.1 Next-Generation Sequencing: Principle	619	35.4.2 Anaerobic Respiration	639
34.5.2 Next-Generation Sequencing: Instrumentation	621	35.5 Subterrestrial Deep Biosphere Provinces	640
34.5.3 Next-Generation Sequencing: Steps to Follow	621	35.5.1 A Hydrothermal Vent	640
34.6 Specific Tools for Analyzing Metagenomics Data and Functional Diversity of Microbial Communities	624	35.5.2 Sedimentary Basins/Oil Reservoirs	640
		35.5.3 Caves	645
		35.5.4 Subsurface Mines	646
		35.6 Centers of Ongoing Research Activity	650
		35.6.1 The Center for Dark Energy Biosphere Investigations	650

35.6.2 Deep Underground Science and Engineering Facility (SURF)	650		
35.6.3 Deep Carbon Observatory	650		
35.7 Conclusions and Prospects	650		
Acknowledgments	651

36. Molecular Evolution of Xenobiotic Degrading Genes and Mobile DNA Elements in Soil Bacteria			
<i>Atif Khan and Toleti Subba Rao</i>			
36.1 Introduction	657	36.7 Mobile DNA Elements in Soil Bacteria	664
36.2 Classification of Soil Microorganisms	657	36.8 Evolution of Mobile DNA Elements	667
36.2.1 Soil Bacteria	657	36.9 Role of Mobile DNA Elements	668
36.2.2 Soil Algae	658	36.9.1 pWWO from <i>Pseudomonas putida</i> Strain mt-2	669
36.2.3 Cyanobacteria	659	36.9.2 pDBF1 from <i>Terrabacter sp.</i> Strain DBF63	669
36.2.4 Soil Fungi	659	36.9.3 Role of Mobile DNA Elements in Bacterial Adaptation	669
36.2.5 Taxonomic Groups of Fungi	659	36.10 Molecular Mechanism of Xenobiotics Degradation	670
36.2.6 Soil Protozoa	660	36.10.1 Molecular Pathways of Xenobiotics Degradation	671
36.3 Potential Xenobiotics in Soil	661	36.11 Evolutionary Changes in Xenobiotics Degrading Genes	672
36.3.1 Organochlorine Compounds	661	36.11.1 Recombination and Transposition	673
36.3.2 Organophosphorus Pesticides	661	36.11.2 Gene Duplication	673
36.4 Cooperation of Xenobiotics With Soil Microorganisms	662	36.11.3 Mutational Drift	673
36.5 Candidate Soil Bacteria for Xenobiotics Degradation	664	36.11.4 Gene Transfer	673
36.6 Xenobiotic Degrading Genes in Soil Bacteria	664	36.12 Mutations in Mobile DNA Elements and Xenobiotic Degrading Genes	674
		36.13 Conclusion	675
