

CONTENTS

<i>Preface</i>	<i>xj</i>
<i>Acknowledgements</i>	<i>xiii</i>
<i>About the Book</i>	<i>xv</i>
1. Introducing Metabolomics	1
1.1 Introduction	1
1.2 Non-Targeted Identification and Quantification of All Metabolites	8
1.3 Quantitative Detection of Metabolites	16
1.4 Identification and Quantification of Metabolites	19
1.5 Targeted Metabolite Analysis	23
1.6 Metabolite Fingerprinting	28
1.7 Metabolite Footprinting	33
1.8 Conclusion	35
References	36
Further Reading	56
2. An Integrated Approach to Plant Biology via Multi-Analogous Methods	57
2.1 Introduction	57
2.2 Transcript Profiling	59
2.3 Microarray-Based Approaches	63
2.4 Sequencing-Based Approaches	66
2.5 Differential-Display-Based Approaches	73
2.6 Protein Analysis	78
2.7 Metabolite Analysis	85
2.8 Analytical Techniques	90
2.9 Pattern Recognition	94
2.10 Multivariate Statistics Techniques	95
2.11 Bioinformatics for Metabolomics	98
2.12 Conclusions	101
References	101
Further Reading	126
3. Metabolomics Studies of Stress in Plants	127
3.1 Introduction	127
3.2 Temperature Stress	129

3.3	Water and Salt Stress	136
3.4	Sulfur and Phosphorus Stress	141
3.5	Oxidative Stress	145
3.6	Heavy Metal Stress	148
3.7	Metabolomic Analysis of Plant-Stress Interactions	151
3.8	Metabolic Network Implicated in Stress Signaling	155
3.9	Conclusion	162
	References	162
	Further Reading	178
4.	Climatic Change and Metabolome Fluxes	179
4.1	Introduction	179
4.2	Seasonal Stoichiometric and Metabolomic Changes	180
4.3	Climatic Parameters and Metabolomic Shift	185
4.4	Variable Elemental Stoichiometry and Global change	198
4.5	Background Radiation and Metabolomic Response	203
4.6	Nutrient Limitations and Homeostatic Competence	206
4.7	Conclusion	212
	References	212
	Further Reading	237
5.	Instrumentation Applied to Metabolomic Analysis	239
5.1	Introduction	239
5.2	Spectroscopic Approaches	241
5.3	Mass Spectrometric Approaches	244
5.4	Capillary Electrophoresis	260
5.5	Raw Data Processing	263
5.6	Challenge of Compartmentalized Metabolomics	267
5.7	Conclusions	269
	References	270
	Further Reading	292
6.	Ecological Metabolomics: Challenges and Perspectives	293
6.1	Introduction	293
6.2	Metabolomic Databases	295
6.3	Metabolome Analysis as an Imperative Tool for Ecological Studies	307
6.4	Metabolomic Analysis of Plant—Environment Interactions	313
6.5	Linking Metabolomics Data to Underlying Metabolic Regulation	319
6.6	Developing Regulatory Strategies From Metabolic Flash	322
6.7	Linearization of Metabolic Functions	325

6.8	Implementation of Statistical Tools to Decipher Population Metabolomes	327
6.9	Identifying Mega-Metabolomes Through Multivariate Data Mining	332
6.10	Ecometabolomics as a Conduit Between Biochemistry and Ecology	335
6.11	Current Challenges in Ecometabolomics	339
6.12	Potential Constraints in Ecometabolomics	347
6.13	New Perspectives in Ecometabolomics	348
6.14	Conclusion	350
	References	351
	Further Reading	377

Index	379
