Author's Biography

vii

Preface

ix

1. Darwin and Mendel: The Historical Connection	1
1. Darwin's Contributions to Hybridization	2
2. Darwin's Prepotency and Mendel's Dominance	7
3. Darwin's Influence on Mendel	12
4. Mendel's Legacy and Limitations	15
5. Darwin, Mendel and Genetics	19
References	21
2. Darwin's Pangenesis and Graft Hybridization	27
1. Darwin on Graft Hybridization	28
2. Michurin's Solutions to Darwin's Puzzles	33
3. Early Experiments on Graft Hybridization	38
4. Further Evidence for Graft Hybridization	44
5. Molecular Mechanisms for Graft Hybridization	55
References	60
3. Darwin's Pangenesis and Medical Genetics	67
1. Darwin, Medicine, and Inherited Diseases	68
2. Darwin's Pangenesis and Cancer Metastasis	72
3. Darwin's Pangenesis and Transplantation	77
4. Darwin's Pangenesis and Regenerative Medicine	80
5. Darwin's Pangenesis and Organ Transposition	83
References	86
4. Darwin's Pangenesis and Certain Anomalous Phenomena	93
1. Xenia: Effects of Pollen on Seeds and Fruits	94
2. Telegony: Influence of Previous Sire on Offspring	102
3. Bud Variation	108
4. Reversion or Atavism	112
5. Inheritance and Non-Inheritance of Mutilation	113
References	115

5. Natural Selection and Pangenesis: The Darwinian Synthesis of Evolution and Genetics	121
1. Lamarckism and the Inheritance of Acquired Characters	122
2. Darwinism Includes Lamarckian Inheritance	124
3. Neo-Darwinism Accepts Natural Selection but Denies Lamarckian Inheritance	127
4. Lysenkoism Accepts Lamarckian Inheritance but Denies Malthusism and Mutationism	131
5. Going Back to Darwinian Synthesis: Natural Selection and Pangenesis	136
References	139
