1. The Genus *Macrococcus*: An Insight Into Its Biology, Evolution, and Relationship With *Staphylococcus*

1

Shahneela Mazhar, Colin Hill, and Olivia McAuliffe

1. Introduction	2
2. Defining the Genus <i>Macrococcus</i>	4
3. Comparative Genomics and Evolution	23
4. Antibiotic Resistance	31
5. Occurrence of <i>Macrococcus caseolyticus</i> in Food Systems	38
6. Concluding Remarks	39
Acknowledgments	41
References	41

2. Electrochemical Bioreactor Technology for Biocatalysis and Microbial Electrosynthesis

51

Clifford Morrison, Elizabeth Heitmann, William Armiger, David Dodds, and Mattheos Koffas

1. Introduction to Electrochemical Bioreactors	52
2. Biocatalysis	54
3. Microbial Biogeochemistry	63
4. Microbial Electrosynthesis	80
5. Conclusions	81
References	82

3. Enhancing Yeast Alcoholic Fermentations

87

Graeme M. Walker and Roy S.K. Walker

1. Introduction	88
2. Alcohol Fermentations by Yeast	89
3. Industrial Alcohol Fermentations	96
4. Optimizing Yeast Fermentations	101
5. Yeast Strain Engineering for Improved Alcohol Fermentations	108
6. Conclusions and Future Perspectives	120
Acknowledgments	121
References	121

4. Diversity-Function Relationships in Natural, Applied, and Engineered Microbial Ecosystems	131
Andrew Free, Michael A. McDonald, and Eulyn Pagaling	
1. Introduction	132
2. Attributing Function to Microbial Diversity in Well-Understood Systems I—Anaerobic Digestion	145
3. Attributing Function to Microbial Diversity in Well-Understood Systems II—Nutrient-Cycling Microbial Microcosms	154
4. Attributing Function to Microbial Diversity in Well-Understood Systems III—Microbiota of the Mammalian GI Tract	161
5. Manipulation of Microbial Community Diversity to Direct Ecosystem Function	165
6. Future Perspectives	176
Acknowledgments	176
References	176
5. Epigenetic and Posttranslational Modifications in Regulating the Biology of <i>Aspergillus</i> Species	191
Xinyi Nie, Bowen Li, and Shihua Wang	
1. Introduction	192
2. Controversy About DNA Methylation in <i>Aspergillus</i>	194
3. Protein Methylation Relevant to Development and Metabolism	196
4. Protein Acetylation	199
5. Phosphorylation	204
6. Ubiquitination	208
7. Sumoylation and Neddylation	211
8. Other Posttranslational Modifications	213
9. Conclusions	213
Acknowledgments	214
References	214
