Preface

xv

1. Epigenetics – A Historical Perspective

1

Peter Meyer

1. Epigenetic Concepts in Evolution Theories 2
2. Paul Kammerer – Charlatan or Grandfather of Epigenetics? 4
3. Political Dogmata 6
4. Conrad Waddington 8
5. Barbara McClintock 10
6. The Role of Transgenic Plants in Identifying Epigenetic Pathways 11
7. Homology-Dependent Gene Silencing 12
8. RNA as a Mediator of Silencing 13
9. Outlook 15
- References 16

2. Epigenetic Mechanisms in Plants

21

Hiroki Maeji and Taisuke Nishimura

1. Introduction 21
2. DNA Methylation 22
3. Histone Modifications 30
4. Histone Variants 37
5. Perspectives 38
- References 39

3. Epigenetic Diversity and Application to Breeding

49

Sunil Kumar Kenchanmane Raju and Chad E. Niederhuth

1. Introduction 50
2. Epigenetics, Epigenomics, and DNA Methylation 51
3. Known Epialleles 57
4. Epigenomic Variation Within Populations 66
5. Epigenomic Variation Between Species 74
6. Applications to Plant Breeding 77

7. Current Challenges	78
8. Conclusion	79
References	79
4. EpiRILs: Lessons From Arabidopsis	87
Marco Catoni and Sandra Cortijo	
1. Introduction	88
2. Definition and Description of the EpiRIL Populations	92
3. DNA Methylation Transgenerational Stability and Its Phenotypic Consequences	94
4. Using EpiRILs to Understand TE Mobilization	100
5. Heterosis	102
6. Challenges With Crops	105
7. Conclusion	108
Acknowledgements	109
References	109
5. Sexual and Non-Sexual Reproduction: Inheritance and Stability of Epigenetic Variations and Consequences for Breeding Application	117
Yu-Hung Hung, Fang Liu, Xiang-Qian Zhang, Wenyan Xiao, and Tzung-Fu Hsieh	
1. Introduction	118
2. Genetic Diversity and Epigenetic Variation	119
3. Molecular Mechanisms of Epigenetics in Plant	120
4. Sexual Reproduction in Flowering Plant	123
5. Chromatin Reprogramming and Dynamic DNA Methylation During Male Gametogenesis	125
6. Chromatin Reprogramming During Arabidopsis Female Gametogenesis and Active DNA Demethylation in the Central Cell	128
7. Epigenetic Reprogramming of the Arabidopsis Central Cell for Endosperm Imprinting	128
8. Inheritance and Stability of Epigenetic Variation	132
9. Non-Sexual Reproduction in Plants	132
10. Epigenetic Transmission During Non-Sexual Reproduction	135
11. Epigenetic Variation in Non-sexual Reproduction	136
12. Possible Drawbacks of Nonsexual Propagation Concerning Epigenetic Regulation	137
13. Naturally Occurring Epigenetic Variation	138

14. Experimentally Induced Epigenetic Variations	143
15. Induced Retrotransposition for Plant Breeding Application	146
16. Mapping for Epigenetic Quantitative Trait Loci (epi-QTL)	147
17. Epigenetics Based Selection for Crop Improvement	148
18. Concluding Remarks	148
Acknowledgement	151
References	151
6. Transposable Elements as Tool for Crop Improvement	165
Michael Thieme and Etienne Bucher	
1. General Introduction	166
2. Transposable Elements in Plant Genomes	167
3. Regulation of Retrotransposition in Plants	172
4. Transposable Elements: Linking the Genome and the Epigenome to the Environment	178
5. Impact on Gene Structure and Expression	180
6. Transposons as a Tool for Crop Improvement and Breeding	182
References	192
7. Roles of Epigenetic Mechanisms in Grafting and Possible Applications	203
Margot M.J. Berger, Philippe Gallusci, and Emeline Teyssier	
1. Introduction	204
2. Establishment of the Graft Union	207
3. Rootstock-Mediated Effects on the Scion and Vice-Versa	220
4. Hetero-Grafting-Mediated Effects May Be Due to Multiple Factors	222
5. Conclusion and Possible Breeding Applications	233
References	236
8. Hybrid Vigor: Importance of Epigenetic Processes and Consequences for Breeding	247
Naomi Miyaji and Ryo Fujimoto	
1. Introduction	248
2. Hybrid Vigor Phenotypes	250
3. Transcriptomic Analysis in Hybrid Vigor	256
4. Epigenetic Processes in Hybrid Vigor	259
5. Perspective	268
Acknowledgements	269
References	269

9. The Control of Bud Break and Flowering Time in Plants: Contribution of Epigenetic Mechanisms and Consequences in Agriculture and Breeding 277

Amanda Malvessi Cattani, Tiago Sartor, Vitor da Silveira Falavigna, Diogo Denardi Porto, Carolina Pereira Silveira, Paulo Ricardo Dias de Oliveira, and Luis Fernando Revers

1. Introduction 278
2. Control of Dormancy and Flowering Time 280
3. Epigenetic as a Key Mechanism for Dormancy Regulation 286
4. *FT*: A Master Switch Controlling Flowering in Angiosperms 290
5. Chromatin Remodeling and Hormonal Stimulus: An Inherent Part of the Flowering Process 297
6. Bud Break and Flowering: Consequences in Agriculture and Breeding 306
- Acknowledgements 310
- References 310

10. Epigenetic Regulations of Fleshy Fruit Development and Ripening and Their Potential Applications to Breeding Strategies 327

Etienne Bucher, Junhua Kong, Emeline Teyssier, and Philippe Gallusci

1. Introduction 328
2. Epialleles as Evidence of the Importance of Epigenetic Mechanisms in Fruits 330
3. DNA Methylation and Histone PTMs Are Involved in the Control of Fruit Set 333
4. Fruit Shape and Fruit Growth 338
5. Epigenetic Regulations of Fruit Ripening 339
6. Conclusion and Perspectives 349
- References 353

11. Aspects of Epigenetic Regulation in Cereals 361

Omar Oltehua-Lopez, Ana E. Dorantes-Acosta, Mathieu Ingouff, Sophie Lanciano, Olivier Leblanc, Daniel Grimanelli, Marie Mirouze, and Mario A. Arteaga-Vazquez

1. Introduction 362
2. Importance of DNA Methylation in Cereals 363
3. Epigenetic Reprogramming and Epialleles 369
4. Imprinting 370

5. Paramutation	373
6. Conclusions and Perspectives	375
References	377
12. Epigenetics in Forest Trees: State of the Art and Potential Implications for Breeding and Management in a Context of Climate Change	387
Mamadou Dia Sow, Isabel Allona, Christophe Ambroise, Daniel Conde, Régis Fichot, Svetlana Gribkova, Véronique Jorge, Grégoire Le-Provost, Luc Pâques, Christophe Plomion, Jérôme Salse, Léopoldo Sanchez-Rodriguez, Vincent Segura, Jörg Tost, and Stéphane Maury	
1. Introduction: Features of Forest Trees Breeding	388
2. Forest Tree Genomics to Support Epigenomic Research	392
3. State of the Art in Forest Tree Epigenomics	400
4. Potential Uses of Epigenetics in Forest Tree Breeding	428
5. Conclusion	435
References	437
