Preface

xvii

1. Semisynthesis of ubiquitinated histone H2B with a native or nonhydrolyzable linkage	1
Michael Morgan, Muhammad Jbara, Ashraf Brik, and Cynthia Wolberger	
1. Introduction	2
2. Preparation of dichloroacetone-linked H2B-Ub	4
3. Preparation of native H2B-Ub	10
4. Notes	23
5. Summary and conclusion	24
Acknowledgments	25
References	25
2. Dual-color pulse-chase ubiquitination assays to simultaneously monitor substrate priming and extension	29
Daniel C. Scott and Brenda A. Schulman	
1. Introduction	30
2. Generate fluorescently labeled ubiquitin (UB)	33
3. Generating thioester-linked E2~UB intermediates for the pulse reaction	35
4. Test the stability of the E2~UB thioester following EDTA addition	38
5. Pulse-chase assays to monitor a single enzyme activity	40
6. Dual-color pulse-chase assays monitoring substrate "priming" with UB and extension of polyUB chains	43
7. Discussion	45
References	47
3. A genetic approach to study polyubiquitination in <i>Saccharomyces cerevisiae</i>	49
Fernando Meza-Gutierrez, Deniz Simsek, and David Paul Toczyski	
1. Introduction	50
2. Strain engineering	52
3. Modification of the conventional SGA method to establish an SK1 4-marker ubiquitin SGA protocol	58
4. Analysis of data quality	59

5. Identification and characterization of genetic interactions	61
6. Validation of genetic interactions	63
7. Single-lysine ubiquitin variants to study ubiquitination <i>in vivo</i>	67
8. Concluding remarks	69
References	69
4. Enzymatic preparation of monoubiquitinated FANCD2 and FANCI proteins	73
Viduth K. Chaugule, Connor Arkinson, Rachel Toth, and Helen Walden	
1. Introduction	74
2. Cloning of expression constructs	76
3. Generation of recombinant proteins required for preparing monoubiquitinated FANCD2 and FANCI	79
4. Purification of monoubiquitinated FANCD2 and FANCI	92
5. Characterization of monoubiquitinated human FANCD2 and human FANCI	98
6. Concluding remarks	100
Acknowledgments	101
References	102
5. Methods to measure ubiquitin chain length and linkage	105
Fumiaki Ohtake, Hikaru Tsuchiya, Keiji Tanaka, and Yasushi Saeki	
1. Introduction	106
2. Ub-AQUA/PRM analysis to quantify ubiquitin linkages and K48/K63 branched chains	109
3. Ub-ProT analysis to measure ubiquitin chain length of <i>in vitro</i> and <i>in vivo</i> ubiquitin conjugates	123
4. Summary and conclusions	130
References	131
6. Detection of ubiquitination activity and identification of ubiquitinated substrates using TR-TUBE	135
Yukiko Yoshida, Yasushi Saeki, Hikaru Tsuchiya, and Keiji Tanaka	
1. Introduction	136
2. Detection of substrate ubiquitination by a given E3 using TR-TUBE	137
3. Identification of substrates for a given E3 ligase using TR-TUBE	141
4. Conclusion	146
References	146

7. Methods to study phosphoribosylated ubiquitin ligation and removal	149
Jiazhang Qiu and Zhao-Qing Luo	
1. Introduction	150
2. Materials	153
3. Methods	155
4. Notes	163
Acknowledgments	164
References	164
8. Biochemical characterization of SUMO-conjugating enzymes by in vitro sumoylation assays	167
Nathalie Eisenhardt, Dragana Ilic, Easa Nagamalleswari, and Andrea Pichler	
1. Introduction	168
2. Substoichiometric substrate modification	170
3. E3-mediated E2 discharge	174
4. E3-E2 backside interaction	177
5. Donor SUMO positioning	180
6. Summary and conclusions	183
Acknowledgments	183
Author contributions	184
References	184
9. Methods to study SUMO dynamics in yeast	187
Stefan Pabst, Lennard-Maximilian Döring, Natasha Petreska, and R. Jürgen Dohmen	
1. Introduction	188
2. General equipment, yeast strains, and plasmids	190
3. Western blot analysis of cellular SUMO conjugates to study effects of stress conditions and mutations affecting enzymatic functions in the SUMO system	192
4. Probing the role of desumoylation, SUMO chain formation, and proteolysis in SUMO dynamics using HA-tagged SUMO variants	196
5. Purification of 8xHis-SUMO conjugates using cobalt beads	203
Acknowledgments	208
References	208

10. Approaches for investigating the extracellular signaling function of ISG15	211
Caleb D. Swaim, Larissa A. Canadeo, and Jon M. Huibregtse	
1. Introduction	212
2. Methods	217
References	225
11. Analysis of modification and proteolytic targeting by the ubiquitin-like modifier FAT10	229
Annette Aichem, Annika N. Boehm, Nicola Catone, Gunter Schmidtke, and Marcus Groettrup	
1. Introduction	230
2. Purification of recombinant FAT10, FAT10-AV, and FAT10-(C0) from <i>E. coli</i>	239
3. In vitro FAT10 activation and substrate FAT10ylation assays	242
4. Expression of endogenous or overexpressed untagged FAT10 in human cells	243
5. Investigation of FAT10 degradation by the 26S proteasome in cellulo and in vitro	247
6. Concluding words	253
Acknowledgments	254
References	254
12. Methods to analyze STUbL activity	257
Emma Branigan, Anna Plechanovová, and Ronald T. Hay	
1. Introduction	258
2. In vitro STUbL-mediated ubiquitination	260
3. Quantitation of the ubiquitination reaction	267
4. Other useful tips to analyze STUbL activity	276
5. Summary and conclusions	277
Acknowledgments	277
References	277
13. Quantitative analysis of USP activity in vitro	281
Shreya Dharadhar, Robbert Q. Kim, Michael Uckelmann, and Titia K. Sixma	
1. Introduction	282
2. Purification of USPs	284
3. Characterization of USPs	295
4. Conclusions	315
References	316

14. Evaluating enzyme activities and structures of DUBs	321
Jonathan N. Pruneda and David Komander	
1. Introduction	322
2. Assessing DUB activity	323
3. Understanding DUB structure	331
4. Summary and outlook	337
References	337
15. Purification and functional characterization of the DUB domain of SdeA	343
Kedar Puvar, Shalini Iyer, Michael J. Sheedlo, and Chittaranjan Das	
1. Introduction	344
2. Constructs used for in vitro functional analyses	345
3. Assays for characterization of the DUB activity of SdeA	347
4. Conclusion	353
References	354
16. Profiling DUBs and Ubl-specific proteases with activity-based probes	357
Paul P. Geurink, Gerbrand J. van der Heden van Noort, Monique P.C. Mulder, Robert C.M. Knaap, Marjolein Kikkert, and Huib Ovaa	
1. Introduction	358
2. Activity-based probes	362
3. Characterization of coronavirus-encoded DUBs with activity-based probes	365
4. Methods	370
5. Conclusions and outlook	381
References	381
Further reading	386
17. Assays of SUMO protease/isopeptidase activity and function in mammalian cells and tissues	389
Kathrin Kunz, Stefan Müller, and Luca Mendler	
1. Introduction	390
2. Activity measurements of deSUMOylating enzymes	392
3. Defining substrate specificity of distinct SUMO proteases	403
4. Summary and conclusion	406
References	408
