CHAPTER 1 Generational epigenetic inheritance 1

Trygve O. Tollefsbol

Introduction.....	1
Definitions and history of generational epigenetic inheritance.....	2
Germ line epigenetics.....	3
Parental epigenetic inheritance.....	4
Basic mechanisms/processes of epigenetic inheritance.....	5
Model organisms	6
Evolution of transgenerational epigenetics	7
Environmental epigenetic effects on the offspring	8
Impact of transgenerational epigenetics on disease.....	8
Clinical significance of transgenerational epigenetics.....	9
Conclusion	9
References.....	10

SECTION I Definitions and history of generational epigenetic inheritance

CHAPTER 2 Definition of epigenetic transgenerational inheritance and biological impacts 13

Eric Nilsson, Millissia Ben Maamar, Michael K. Skinner

Introduction and historical context.....	13
Epigenetic transgenerational inheritance	14
Germ line epimutations	17
Transgenerational inheritance of disease and phenotypic variation.....	18
Transgenerational disease etiology	19
Impact and future studies	20
Glossary	20
References.....	20

CHAPTER 3 Historical perspective of transgenerational epigenetics..... 25

Dao H. Ho

Introduction.....	25
Shifting paradigms of heredity and evolution.....	26

Early evidence of non-mendelian inheritance.....	28
The origins of epigenetics	30
Intersection of phenomena and mechanisms	31
Defining the scope of transgenerational epigenetics	33
Conclusion	34
References.....	34

SECTION II Germline epigenetics

CHAPTER 4 Epigenetic changes in the mammalian paternal germ line 43

Mirella L. Meyer-Ficca, Ralph G. Meyer

Introduction.....	43
The paternal germ line: sperm functions and structures	46
Components of the sperm epigenome.....	46
Sperm histone retention and histone code	47
Sperm nuclear architecture.....	54
Sperm DNA methylation: origin and sensitive windows	56
Small RNAs in sperm.....	59
The sperm epigenome: necessary next steps	62
References.....	62

SECTION III Parental epigenetic inheritance

CHAPTER 5 Maternal epigenetic inheritance..... 75

Zhao-Jia Ge, Qing-Yuan Sun

Introduction.....	76
Maternal epigenetics.....	76
Maternal epigenetic reprogramming in germ cells.....	76
Maternal epigenetic reprogramming in early embryos.....	79
Epigenetic distinction between female and male	81
Response of maternal epigenetics to environmental exposure.....	81
External environmental factors and maternal epigenetics.....	81
Assisted reproductive technologies	83
Internal environment and maternal epigenetics	84
Inheritance of maternal epigenetics	86
Maternally intergenerational inheritance of epigenetics and potential mechanism(s).....	87
Maternal transgenerational inheritance of epigenetics and potential mechanism(s).....	88
Chromatin landscape and environment.....	88
Mitochondria and inheritance of environmental exposure	89

Perspectives.....	90
References.....	91
CHAPTER 6 Paternal epigenetic inheritance.....	107
<i>Rahia Mashoodh, Frances A. Champagne</i>	
Introduction.....	107
Paternal intergenerational and transgenerational effects	108
Nutritional effects	108
Drugs and toxins.....	108
Social environments.....	109
Paternal age.....	110
Mechanisms of paternal intergenerational and transgenerational effects	111
Genetic modification.....	111
Epigenetic modifications	113
DNA methylation.....	113
Posttranslational histone modifications	117
Small RNAs.....	117
Paternal effects on maternal investment	120
Issues and future directions.....	123
List of abbreviations.....	125
References.....	126
SECTION IV Basic mechanisms/processes of epigenetic inheritance	
CHAPTER 7 Towards the molecular mechanisms of transgenerational epigenetic inheritance: insights from transgenic mice	137
<i>Dana M. Freeman, Zhibin Wang</i>	
Epigenetic resetting and inheritance in humans	137
Epigenetic resetting and inheritance in mammals.....	138
Rodent models in epigenetic inheritance.....	140
Intergenerational versus transgenerational inheritance.....	140
Transgenerational phenotypes in rodents.....	140
Challenges in studying mechanisms of transgenerational inheritance.....	142
Using transgenic models to observe transgenerational inheritance in mice	143
Examples of transgenic models in transgenerational inheritance research.....	145
Transgenic models to study chromatin-mediated epigenetic inheritance	145
The use of transgenic models to study RNA-mediated epigenetic inheritance	148
The use of mutational screens to study mechanisms of epigenetic inheritance	149
Final thoughts	150
References.....	151
Further reading	156

CHAPTER 8 Histone-mediated transgenerational epigenetics 157

Vincenzo Cavalieri, Giovanni Spinelli

Introduction.....	157
Epigenetic mechanisms driven by histones	158
Histone posttranslational modifications	158
Histone variants	165
Nucleosome positioning	166
Histone-mediated epigenetic inheritance through the germ line.....	167
Transmission of maternal histones across generations	168
Nucleosome retention and histone posttranslational modifications in mammalian sperm cells.....	169
Histone propagation via the germ line in nonmammalian organisms.....	170
Potential role of histones in transgenerational inheritance of disease	172
Conclusions.....	172
References.....	173

CHAPTER 9 Heritable generational epigenetic effects through small noncoding RNA..... 185

John M. Schoelz, Nicole C. Riddle

Introduction.....	185
Small RNA pathways	187
Transgenerational inheritance via the gametes	189
Gametic small RNA populations.....	189
RNA-guided genome rearrangements in ciliates	190
<i>Tetrahymena thermophila</i>	190
<i>Oxytricha trifallax</i>	191
RNA transport in plant systems	191
Paramutation in maize	192
RNA transfer via the gametes in <i>Arabidopsis thaliana</i>	194
Transgenerational inheritance of RNA interference in <i>Caenorhabditis elegans</i>	195
The PIWI-interacting RNA pathway, transposon silencing, and hybrid dysgenesis	198
Transgenerational epigenetic inheritance in mammals.....	200
PIWI-interacting RNA inheritance and imprinting in mouse.....	201
MicroRNA inheritance and paramutation in mouse	202
Transgenerational epigenetic inheritance in humans.....	203
Conclusion	203
List of acronyms and abbreviations	204
Acknowledgments.....	204
References.....	204

CHAPTER 10 Long noncoding RNA and epigenetic inheritance..... 213

Louis Legoff, Shereen Cynthia D'Cruz, Sergei Tevosian, Fatima Smagulova

Introduction.....	213
Classification of long noncoding RNAs.....	214
Cross talk between long noncoding RNAs and other epigenetic mechanisms.....	219
Long noncoding RNAs and DNA methylation.....	219
Long noncoding RNAs in chromatin state regulation.....	221
Mechanisms of long noncoding RNAs in transcriptional regulation and in chromatin spatial organization.....	222
Regulatory mechanisms of long noncoding RNAs.....	223
X-chromosome inactivation.....	223
Genomic imprinting.....	224
Pluripotency.....	225
Development.....	227
Long noncoding RNA and transgenerational inheritance.....	228
Germ line reprogramming and transgenerational inheritance.....	228
Paternal transgenerational inheritance.....	229
Influence of environment on transgenerational inheritance.....	232
Conclusions and future directions.....	236
Acknowledgments.....	237
References.....	237

SECTION V Model organisms

CHAPTER 11 Nonmammalian model organisms in epigenetic research: an overview..... 251

Parisa Norouzitallab, Kartik Baruah, Peter Bossier, Daisy Vanrompay

Introduction.....	251
DNA methylation.....	252
Histone modifications.....	253
Noncoding RNA.....	253
Understanding epigenetics through nonmammalian model organisms.....	254
Zebrafish.....	254
Drosophila.....	255
Caenorhabditis elegans.....	256
Yeast.....	257
Conclusions.....	257
Acknowledgments.....	258
References.....	258
Further reading.....	261

CHAPTER 12 Plant models of transgenerational epigenetic inheritance 263

Maria Luz Annacondia, German Martinez

Introduction.....	263
The epigenetic machinery in plants	264
DNA methylation.....	264
Histone modifications in plants.....	266
Interplay between DNA methylation and histone modifications.....	267
The epigenetic machinery during reproduction.....	267
Overview of plant reproduction	267
Reprogramming of epigenetic marks in the male and female gametophytes	268
Postfertilization epigenetic events.....	271
Examples of transgenerational inheritance in plants	272
Natural epialleles	272
Experimental epialleles	273
Environmentally induced epialleles	273
Mechanistic regulation of the transgenerational memory	274
Conclusion and perspective	277
References.....	277

CHAPTER 13 Epigenetics and heritable phenotypic variations in livestock 283

Shudai Lin, Lingzhao Fang, George E. Liu, Cong-Jun Li

Introduction.....	284
Genomic research of farm animals	284
Genome, chromatin, and epigenetics	285
Genome.....	285
Chromatin	285
Emerging of epigenetics.....	286
Epigenetic research in farm animals.....	288
Epigenetic mechanisms and gene regulation	288
Cellular memory, cell fate reprogramming, and maintenance	289
Genetic program and cell fate decisions.....	290
Epigenetic memory underlies developmental decisions of cell fate	290
Epigenetic regulation underlies developmental decisions of cell fate	291
The environmental perturbations and epigenetics in farm animals.....	291
Transgenerational epigenetic inheritance.....	294
Transgenerational inheritance in livestock.....	297
Transgenerational epigenetic inheritance in livestock- molecular mechanisms	301
DNA methylation.....	301
Histone modification.....	303

Gene imprinting.....	304
Noncoding RNAs and epitranscriptome	304
Perspective	305
Acknowledgments.....	305
References.....	305

CHAPTER 14 Transgenerational epigenetic inheritance in insects 315

Krishnendu Mukherjee, Andreas Vilcinskas

Introduction.....	315
Gene expression and transgenerational inheritance in insects	317
Adaptation to seasonal changes	317
Adaptation to pathogens.....	318
Epigenetic regulation of phenotypic plasticity in insects	319
DNA methylation.....	319
Histone acetylation	320
MicroRNAs	321
Transgenerational epigenetic inheritance in insects	322
Conclusions.....	323
Acknowledgments.....	324
References.....	324

SECTION VI Evolution of transgenerational epigenetics

CHAPTER 15 Evolutionary perspectives on transgenerational epigenetics 333

Tobias Uller

Introduction.....	333
Epigenetic inheritance and evolution.....	336
Evolutionary responses: beyond the breeder's equation.....	337
Evolution of epigenetic inheritance: stability versus plasticity.....	342
Conclusions.....	345
Acknowledgments.....	345
References.....	346

CHAPTER 16 Inheritance of epigenome variants across generations during evolution..... 351

Annalisa Varriale

Introduction.....	351
Intergenerational and transgenerational inheritance of epigenetic patterns	352
Mechanisms involved in epigenetic inheritance	352

Epigenetic inheritance contribution to complex diseases and to evolutionary adaptation.....	354
Epigenetic inheritance and diseases.....	354
Epigenetic inheritance and evolution.....	355
Epigenetic inheritance in animals.....	356
Epigenetic inheritance and evolution in plants.....	357
Conclusions.....	357
References.....	358

SECTION VII Environmental epigenetic effects on the offspring

CHAPTER 17 Transgenerational epigenetics of endocrine-disrupting chemicals in mammals..... 369

Lavinia Casati, Fabio Celotti

Introduction.....	369
Endocrine disrupters.....	373
Vinclozolin.....	373
Dichlorodiphenyltrichloroethane.....	374
Polychlorinated biphenyls compounds.....	375
Dioxins.....	376
Methoxychlor.....	377
Bisphenol A.....	377
Phthalates.....	379
Other compounds.....	380
Atrazine.....	380
"Pesticide mixture" N,N diethyl-meta-toluamide/permethrin.....	381
Hydrocarbons (jet fuel JP-8).....	381
Concluding remarks: a word of caution.....	381
References.....	382
Further reading.....	388

CHAPTER 18 Transgenerational effects of imprinting..... 389

Liborio Stuppia

What is genomic imprinting?.....	389
The function of genomic imprinting.....	390
Sex-specific differences in imprinting.....	391
Genomic imprinting and human diseases.....	391
Transgenerational inheritance.....	394
Coadaptation of hypothalamus and placenta.....	395
Genomic imprinting, endocrine disruptors, and transgenerational inheritance.....	396
Conclusions.....	397
References.....	398

CHAPTER 19 Epigenetic inheritance across multiple generations 401

*Thushara Thamban, Viplove Agarwal, Amitava Basu, Ramisetti Rajeev,
Anunay Sinha, Ambey Prasad Dwivedi, Sanjeev Khosla*

Transgenerational epigenetic inheritance.....	402
Transgenerational epigenetic inheritance in plants.....	402
Transgenerational epigenetic inheritance in invertebrates.....	403
Transgenerational epigenetic inheritance in nonhuman mammals.....	404
Transgenerational epigenetic inheritance in humans.....	405
The germ cells and transgenerational epigenetic inheritance.....	405
Transgenerational epigenetic inheritance through paternal germ line	406
Transgenerational epigenetic inheritance through the maternal germ line	406
Epigenetic profile of germ cells	407
Transgenerational epigenetic inheritance—mechanisms	410
Escaping the DNA methylation programming.....	410
Retention of histone marks.....	411
Noncoding RNA	412
Extracellular vesicles.....	413
Heat shock protein 90.....	413
Transgenerational epigenetic inheritance and evolution.....	414
Acknowledgments.....	415
References.....	415

SECTION VIII Impact of transgenerational epigenetics on disease

CHAPTER 20 Transgenerational epigenetics, paternal obesity, and insulin resistance 423

Felicia V. Nowak, Yuriy Slyvka

Epidemiology of obesity: evidence for epigenetic inheritance	423
Animal models of effects of paternal diet and lifestyle on first-generation offspring: mediators and mechanisms.....	425
Inherited epigenetic changes may persist for more than one generation	429
Some epigenetic changes are reversible or modifiable.....	431
Summary	432
References.....	433

CHAPTER 21 Epigenetic inheritance of type 2 diabetes 439

*Silvia Ribo, Marta Ramon-Krauel, Ivonne Palacios-Marin, Ruben Diaz,
Carles Lerin, Josep C. Jiménez-Chillaron*

The diabetes and obesity epidemics.....	440
Nongenomic inheritance of obesity and diabetes: evidence from human studies	441
Epigenetic inheritance	442

Epigenetic inheritance of obesity/diabetes in humans: evidence from epidemiological cohorts.....	443
Maternal versus paternal effects.....	443
Human cohorts.....	445
Epigenetic inheritance of obesity/diabetes in experimental models: the quest for mechanism.....	448
Cytosine methylation.....	448
Histone retention.....	454
Noncoding RNAs.....	454
Conclusion.....	456
Acknowledgments.....	458
References.....	458

SECTION IX Clinical significance of transgenerational epigenetics

CHAPTER 22 Clinical aspects of transgenerational epigenetics 465

Eric J.G. Sijbrands

Introduction.....	466
Mechanisms of transgenerational epigenetics.....	466
Coordination of physiological networks and biological processes.....	466
DNA methylation.....	466
Histone modification.....	467
Noncoding RNA/RNA interference.....	467
Epigenetic inheritance.....	468
Physiological consequences of transgenerational epigenetics.....	469
Behavior.....	469
Fertility.....	469
Pathophysiological consequences of transgenerational epigenetics.....	470
Obesity and diabetes.....	470
Cardiovascular disease.....	470
Kidney disease.....	471
Transgenerational cancer risk.....	472
Autoimmune disease.....	472
Mental disorders.....	473
Assisted reproductive technologies.....	473
Therapy.....	474
DNA methyltransferase inhibitors.....	474
Histone deacetylases inhibitors.....	474
RNA interference.....	475
Drugs already in use with epigenetic effects.....	475

Nutrition during pregnancy	476
Epigenetic changes caused by radiation and toxic substances	476
Conclusion	477
References	477
Further reading	483
Index	485
