Preface vii

I

PHYSICAL AND CHEMICAL REASONS FOR DESTRUCTION IN LIVING SYSTEMS

1. Cells and Organisms as Open Systems

- 1.1 Main Properties of Cells 3
- 1.2 Thermodynamic Basis of Life 4
- 1.3 Functioning of Life as Open System 9
- 1.4 High Order of Biological Material Versus Destruction 13
- 1.5 Destructions and Their Prevention in Complex Organisms 17
- 1.6 On the Structure of This Book 20
- 1.7 Summary 21
- References 21

2. Role of Reactive Species in Destructions

- 2.1 Short Characterization of Reactive Species 23
- 2.2 Dioxygen-Derived Reactive Species 24
- 2.3 Nitrogen-Based Reactive Species 33
- 2.4 Transition Metal Ion-Based Species 35
- 2.5 (Pseudo)Halogen-Based Reactive Species 37
- 2.6 Reactive Species in Cell and Tissue Destruction 41
- 2.7 Instead of a Summary: Reactive Species Versus General Protective Mechanisms 43
- References 44

3. Oxidation and Reduction of Biological Material

- 3.1 Unwanted Destruction of Biological Material 55
- 3.2 Oxidation of Lipids 55

- 3.3 Destructions in Carbohydrates 65
- 3.4 Oxidations in Proteins 67
- 3.5 Destructions in Nucleic Acids 70
- 3.6 Antioxidative Defense by Small Molecules 73
- 3.7 Redox Homeostasis 81
- 3.8 Repair Mechanisms of Nucleic Acids 84
- 3.9 Summary and Outlook 85
- References 85

II

PROTECTION AGAINST CYTOTOXIC COMPONENTS AND DESTRUCTIONS

4. Disturbances in Energy Supply

- 4.1 Introduction 101
- 4.2 Transport of Dioxygen by Red Blood Cells 101
- 4.3 Dioxygen in Muscle Cells and Other Tissues 106
- 4.4 Cytotoxic Effects of Dioxygen-Binding Heme Proteins and Their Components 109
- 4.5 Utilization of Glucose and Dioxygen in Cells and Mitochondria 111
- 4.6 Dioxygen in Tissues Under Normal and Pathological Conditions 116
- 4.7 Glucose as an Energy Substrate 119
- 4.8 Summary 124
- References 125

5. Mechanisms of Cell Death

- 5.1 Overview 135
- 5.2 Apoptosis: Mitochondrial Pathway 135
- 5.3 Apoptosis: Death Receptor Pathway 138
- 5.4 Necrosis 138
- 5.5 Special Forms of Programmed Cell Death 139
- 5.6 Degradation of Dysfunctional Components and Waste Product Formation 141

- 5.7 Red Blood Cells 144
- 5.8 Neutrophils 145
- 5.9 Summary 146
- References 146

6. Immune Response and Tissue Damage

- 6.1 Short Characterization of Immune Cells as Key Players of Immunity 155
- 6.2 Regulation of Immune Processes 159
- 6.3 Inflammatory Response 163
- 6.4 Important properties of polymorphonuclear leukocytes 172
- 6.5 Macrophages as Main Phagocytes 176
- 6.6 Special Aspects of Acquired Immune Response 178
- 6.7 Dysregulation of Immune Responses 182
- 6.8 Summary 185
- References 187

7. Acute-Phase Proteins and Additional Protective Systems

- 7.1 Acute-Phase Response 205
- 7.2 Control of Inflammatory Response by Acute-Phase Proteins 207
- 7.3 Complement System 211
- 7.4 Coagulation System 214
- 7.5 Links Between Complement, Coagulation, and Inflammation 217
- 7.6 Summary 219
- References 220

III

AGING PROCESSES AND DEVELOPMENT OF PATHOLOGICAL STATES

8. Aging in Complex Multicellular Organisms

- 8.1 Introduction 231
- 8.2 Genes and Aging 231
- 8.3 Neuroendocrine Theories of Aging 234

- 8.4 Damage Accumulation Theories 236
- 8.5 Aging as a Consequence of Growth Limitation 238
- 8.6 Concluding Remark 241
- References 241

9. Cell and Tissue Destruction in Selected Disorders

- 9.1 Introduction 249
- 9.2 Disturbances of the CardioVascular System 249
- 9.3 Diabetes Mellitus and Complications 255
- 9.4 Neurodegenerative Disorders 258
- 9.5 Autoimmune Disorders 262
- 9.6 Diseases of the Respiratory Tract 263
- 9.7 Diseases of the Digestive System 264
- 9.8 Cancer 266
- 9.9 Concluding Remarks 268
- References 269

10. Organ Damage and Failure

- 10.1 Elimination of Wastes and Xenobiotics from the Organism 289
- 10.2 Kidney Dysfunctions 289
- 10.3 Liver Damage 291
- 10.4 Spleen Damage 294
- 10.5 Sepsis 294
- 10.6 Devastating Consequences of Sepsis 298
- 10.7 Concluding Remarks 299
- References 299

11. Conclusions

- 11.1 The Alliance of High Complexity and Destructions in Living Systems 309
- 11.2 Disturbances of Homeostasis 309
- 11.3 Peculiarities of Defense Mechanisms 312
- 11.4 What Can We Do to Avoid Dreadful Effects of Damaging Reactions? 313

- Appendix: Some Basics About Redox Reactions in Living Systems 315
- Index 327
