1. The Molecular and Cellular Regulation of Brassicaceae Self-Incompatibility and Self-Pollen Rejection

1

Eli Jany, Hayley Nelles, and Daphne R. Goring

1. Introduction 2
2. Role of Small RNAs in Dominant-Recessive Interactions Between S-Haplotypes 5
3. Use of the Transgenic *Arabidopsis thaliana* Model System to Further Explore SRK Function, Localization, and Modification 11
4. Investigating the Self-Incompatibility Signaling Pathway: MLPK and ARC1 13
5. Cellular Responses Triggered by ARC1 17
6. Calcium Fluxes and Autophagy in Self-Incompatibility Signaling 20
7. Diversity in Brassicaceae Self-Incompatibility and Unilateral Incompatibility 23
8. Conclusions and Future Directions 26
- Acknowledgments 26
- References 27

2. Regulation of Plant Immunity by the Proteasome

37

Charles Copeland and Xin Li

1. Introduction 38
2. E3 Ligases With Immune-Related Functions 42
3. The Role of General Proteasome Components in Plant Immunity 51
4. Conclusions and Perspectives 55
- References 56

3. Role of the Ubiquitin Proteasome System in Plant Response to Abiotic Stress

65

Sophia L. Stone

1. Introduction 66
2. The Ubiquitin Proteasome System 66
3. UPS-Dependent Regulation of Abiotic Stress Response 78

4. Modes of E3 Regulation of Abiotic Stress Signaling	87
5. Complexity of Ubiquitin-Dependent Regulation of Stress Signaling	95
References	97
4. Glycosylation and Antitumor Immunity	111
Alexandra P. Cadena, Taylor R. Cushman, and James W. Welsh	
1. Introduction	111
2. Glycosylation and Protein Modification: An Overview	112
3. Glycosylation's Role in Cancer	113
4. Glycosylation and Tumor Immune Evasion	115
5. Endogenous Lectins and Adaptive Immunity	116
6. The Immunosuppressive Nature of Glycosphingolipids	118
7. Sialic Acid Domains and Antitumor Immunity	118
8. Glycan-Based Cancer Therapies	120
9. Conclusion	123
Conflicts of Interest	123
References	123
5. Emerging Themes in PDZ Domain Signaling: Structure, Function, and Inhibition	129
Xu Liu and Ernesto J. Fuentes	
1. Introduction	130
2. Cellular Function of PDZ Domain-Containing Proteins and Their Link to Disease	131
3. Canonical PDZ Domain-Binding Motifs and Novel Ligands	151
4. Inhibition of PDZ Domain/Ligand Interactions	165
5. Regulation of PDZ Domain/Ligand Interactions	180
6. Conclusions	197
Acknowledgments	197
References	198
6. Cross Talk Networks of Mammalian Target of Rapamycin Signaling With the Ubiquitin Proteasome System and Their Clinical Implications in Multiple Myeloma	219
Ruth Eichner, Vanesa Fernández-Sáiz, Bianca-Sabrina Targosz, and Florian Bassermann	
1. Introduction	220
2. Mammalian Target of Rapamycin Signaling Pathways	222

3. Interplay Between Mammalian Target of Rapamycin Pathways and the Ubiquitin Proteasome System	235
4. Targeting the mTOR Pathway in MM	246
5. Conclusion	264
Acknowledgments	266
References	266
