SECTION I Introduction

CHAPTER 1 Introduction to nutritional epigenomics	3
<i>Samantha Romanick and Bradley S. Ferguson</i>	
1. Introduction	3
2. Epigenetic regulators.....	4
2.1 DNA methylation	4
2.2 Histone modification	5
2.3 RNA based modifications.....	7
3. Transgenerational inheritance.....	7
4. Summary	8
References.....	8

SECTION II Epigenetic regulators

CHAPTER 2 DNA methylation and chromatin modifications	13
<i>Zahra Sepehri, Tasnim H. Beacon, Fadumo D.S. Osman, Sanzida Jahan and James R. Davie</i>	
1. Epigenetics and chromatin organization	13
1.1 Three-dimensional structure of chromatin.....	14
2. DNA methylation	17
2.1 DNA demethylation.....	19
2.2 Mitochondrial DNA methylation	20
3. Histone modifications and their distribution in the genome.....	21
3.1 Histone acetylation.....	21
3.2 Histone lysine methylation.....	22
3.3 PRMTs and histone arginine methylation	22
3.4 Arginine demethylation.....	24
4. Metabolism and epigenetics	24
4.1 Metabolism and chromatin modifications.....	24
4.2 Hypoxia-induced epigenetic changes.....	26
5. Concluding remarks	26
Acknowledgments.....	27
References.....	28

CHAPTER 3 Small non-coding RNAs as epigenetic regulators 37*Tong Zhou*

1. Introduction	37
2. Canonical small non-coding RNAs	37
2.1 Micro RNAs (miRNAs)	37
2.2 Small interfering RNAs micro RNAs (siRNAs)	38
2.3 Piwi-interacting RNAs (piRNAs)	39
3. Non-canonical small non-coding RNAs	40
3.1 tRNA-derived small RNAs (tsRNAs)	40
3.2 rRNA-derived small RNAs (rsRNAs)	41
4. High-throughput approaches to profile small non-coding RNAs	41
References	44

SECTION III Epigenomic regulation of disease**CHAPTER 4 The impact of race and ethnicity in the social epigenomic regulation of disease 51***David H. Rehkopf and Belinda L. Needham*

1. Introduction	51
2. What do we mean when we talk about race and ethnicity?	52
3. How is genotype related to race and ethnicity?	53
4. Differences in the analysis of race and ethnicity in genetic research as compared to epigenetic research	54
5. Recommendations for considering continental ancestry for studies involving race or ethnicity and DNA methylation	57
6. Current state of studies on the role of race and ethnicity in the epigenomic regulation of disease	58
7. Alternative approaches to examining race and ethnicity and genetics in relation to DNA methylation	63
8. Summary	64
References	64

CHAPTER 5 The epigenomic impact of methylation in metabolic dysfunction and cancer 67*Cynthia A. Zahnow*

1. Introduction	67
2. DNA methylation and its role in regulating gene expression	67
2.1 Enzymes and substrates important in the regulation of DNA methylation	69
2.2 DNMT Inhibitors-(Inhibition of DNA methyl transferase)	73
3. DNA methylation and hypoxia	75

4. Mutations in tumor suppressors aberrantly regulate metabolites and alter DNA methylation.....	76
4.1 LKB1 and LKB2 mutations.....	76
4.2 IDH1 and IDH2 mutations.....	77
5. Conclusions.....	78
References.....	78

CHAPTER 6 The role for DNA/RNA methylation on neurocognitive dysfunctions..... 85

Xiangru Xu

1. Brain aging and cognitive dysfunction.....	85
2. DNA methylation, brain aging and cognitive dysfunction.....	86
2.1 DNA methylation.....	86
2.2 DNA methylation and brain aging/cognitive dysfunction.....	89
3. RNA methylation, brain aging and cognitive dysfunction.....	91
3.1 RNA methylation.....	91
3.2 RNA methylation and brain aging/cognitive dysfunction.....	92
4. Interventions and drug development targeting DNA methylation in brain aging/cognitive dysfunction.....	92
4.1 Interventions.....	92
4.2 Epigenetic drug development.....	93
5. Perspectives and challenges.....	94
5.1 The complexity of transcriptional regulation by DNA methylation.....	94
5.2 Elucidating the functional significance of DNA methylation.....	95
5.3 Interplay of DNA methylation and histone modification.....	95
5.4 Examine RNA methylation (m5C) and its role in brain aging and cognitive dysfunction.....	95
References.....	96

CHAPTER 7 Histone acylation in the epigenomic regulation of insulin action and metabolic disease..... 101

Aneta Balcerczyk, Marta Biesiekierska, Varvara Vialichka and Luciano Pirola

1. Introduction.....	101
2. Insulin signaling: an outlook.....	102
3. The structure of chromatin: general notions.....	103
3.1 Histone acetylation.....	103
3.2 Histone β -hydroxybutyrylation.....	105
3.3 Histone 2-hydroxyisobutyrylation.....	107
3.4 Histone propionylation, butyrylation, crotonylation.....	107
3.5 Histone succinilation and malonylation.....	108
3.6 Histone lysine benzoylation — linking nutritional additives to epigenetics	109

4. The interaction between insulin signaling and histone acetylation/acylations.....	110
4.1 The epigenetic control of insulin-regulated genes.....	110
4.2 Epigenetic alterations in type 2 diabetes and in insulin resistance.....	110
4.3 Histone acetylation in pancreatic beta cells	112
5. Conclusions. Importance of histone acetylation/acylation in the modulation of insulin action and future challenges.....	112
References.....	113

CHAPTER 8 Cancer and non-coding RNAs..... 119

Yong Peng, Jiao Li and Lei Zhu

1. Introduction	119
2. MicroRNA.....	119
2.1 miRNA biogenesis and function	120
2.2 Dysregulated miRNAs in human cancers	120
2.3 Cause of miRNAs dysregulation in cancer.....	120
2.4 The role of miRNAs in cancer hallmarks.....	120
2.5 MiRNA-targeting therapeutics	122
3. Long non-coding RNA.....	122
3.1 LncRNA classification, biogenesis and function	122
3.2 The role of lncRNAs in cancer hallmarks	123
4. tRNA-derived small non-coding RNA (tsRNA).....	124
4.1 Classification, biogenesis and function of tsRNA	124
4.2 The role of tsRNAs in the hallmarks of cancer.....	125
5. Circular RNA (circRNA)	126
5.1 Formation of circRNAs	126
5.2 Functional mechanism of circRNAs	126
5.3 The role of circRNAs in cancer hallmarks.....	126
6. Conclusions	127
References.....	127

SECTION IV Nutrition, epigenetics and transgenerational inheritance

CHAPTER 9 Race in the social-epigenomic regulation of pre- and perinatal development..... 135

Robert H. Lane, Amber V. Majnik and Jeffrey L. Segar

1. Introduction	135
2. Racial disparity and environment – epigenetics (humans)	136
3. Racial disparity and environment – epigenetics (animal).....	138
4. Nature versus nurture	139
4.1 Human studies of nature versus nurture.....	139
4.2 Animal studies of nature versus nurture	141

5. Glucocorticoid biology: a paradigm for health disparities and epigenetics	143
6. Summary	145
References.....	146
CHAPTER 10 Maternal nutrition, epigenetic programming and metabolic syndrome.....	153
<i>Ho-Sun Lee</i>	
1. Introduction	153
2. Epigenetic mechanism and metabolic disease	153
2.1 DNA methylation and metabolic disease.....	154
2.2 Histone modification and metabolic disease	154
3. Placental nutrient transfer.....	155
4. Epigenetic modulation in maternal-fetal microbiota by maternal diet.....	157
5. Maternal supplementation and epigenetic regulation during pregnancy	159
5.1 Methyl donors (vitamin B and choline).....	159
5.2 Vitamin C	160
5.3 Minerals.....	161
5.4 Probiotics.....	162
6. Conclusion.....	162
References.....	162
CHAPTER 11 Epigenetic inheritance of metabolic signals.....	167
<i>Gretchen van Steenwyk, Ali Jawaaid and Isabelle M. Mansuy</i>	
1. Introduction	167
2. Evidence for inter- and transgenerational epigenetic inheritance in response to dietary exposure and metabolic perturbations in rodents	168
3. Evidence for inter- and transgenerational transmission from dietary exposure and metabolic perturbations in humans.....	174
4. How metabolic signals regulate the epigenome.....	175
4.1 Methylation.....	175
4.2 Acetylation.....	176
4.3 Hormones.....	177
5. Metabolic evidence from RNA.....	178
6. Impact of the microbiome.....	179
7. Lipids in epigenetic inheritance.....	180
8. Conclusion.....	180
References.....	180

CHAPTER 12 The paternal diet regulates the offspring epigenome and health	191
<i>Menghong Yan</i>	
1. Introduction	191
2. The effects of paternal diets on offspring and epigenetic inheritance.....	192
2.1 Human studies	192
2.2 Animal studies	192
3. The possible mechanisms	193
3.1 DNA modifications.....	193
3.2 Histone modifications.....	195
3.3 RNA and RNA modifications	195
4. Present and future perspectives	196
References.....	197

SECTION V Nutritional epigenomics and the circadian clock

CHAPTER 13 The interplay between diet, epigenetics and the circadian clock	203
<i>Luciano DiTacchio</i>	
1. Introduction	203
2. Molecular mechanisms of the mammalian circadian oscillator	203
3. The circadian clock and energy metabolism.....	204
4. Epigenetic regulation integrates the circadian clock and energy metabolism.....	205
5. Diet and the clock: linked by epigenetics?	206
6. Conclusions	207
Acknowledgments.....	208
References.....	208

CHAPTER 14 Epigenetic regulation of the fetal circadian clock: implications for nutritional programming of circadian and metabolic function	211
<i>Rachael C. Crew, Peter J. Mark and Brendan J. Waddell</i>	
1. Introduction	211
2. Circadian rhythms	211
3. Circadian clocks and metabolism.....	212
4. Fetal circadian development	214
5. Maternal nutritional signals alter fetal molecular clocks	214
6. Programming of the adult circadian phenotype by nutritional signals.....	215
7. Epigenetic mechanisms underlying the programmed circadian phenotype	215
7.1 DNA methylation of clock and clock-related genes	215
7.2 Histone modifications of clock and clock-related genes.....	219

7.3 miRNA activity and the circadian clock.....	221
8. Conclusions	223
References.....	223
 CHAPTER 15 The role for the microbiome in the regulation of the circadian clock and metabolism	 231
<i>Sean T. Anderson and Georgios K. Paschos</i>	
1. Introduction	231
2. Microbial metabolites as zeitgebers in the gut and beyond.....	231
2.1 Bacterial metabolites as nuclear receptor ligands	231
2.2 G-protein coupled receptors and short-chain fatty acids.....	233
2.3 Amino acids and other microbial metabolites as zeitgebers.....	235
3. Sensing of PAMPs by host cells	235
4. Diurnal patterns of mucus penetration and adherence to intestinal epithelial cells	236
5. Vagus nerve sensing of bacteria and their metabolites — a direct link from the gut to the brain.....	237
6. Pathways for the rhythmic regulation of the microbiome by the host	237
6.1 Food intake synchronizes gut microbiota oscillations.....	238
6.2 Selection for and sequestering of commensal microbes by our own immune system.....	238
6.3 Gastrointestinal serotonin and melatonin signal between the host and microbiota.....	240
6.4 Infiltration of intestinal miRNAs modulate survival of gut commensals	241
6.5 Biliary secretion of bile salts and sex hormones differentially favor diverse bacteria	241
7. Conclusion.....	242
References.....	243

SECTION VI Caloric restriction and exercise in the epigenomic regulation of aging and disease

CHAPTER 16 Epigenomic reprogramming of caloric restriction on aging.....	251
<i>Samo Ribarič</i>	
1. Introduction	251
1.1 Caloric restriction effects in humans	251
2. CR epigenomic reprogramming mechanisms.....	253
3. DNA methylation	254
3.1 DNA methylation, biological aging clocks, aging and senescence	255
3.2 Dietary constituents modulate DNA methylation.....	256
3.3 CR modulates DNA methylation	256

4. Post-translational modification of histones.....	257
4.1 CR modulates post-translational modification of histones.....	257
4.2 CR promotes histone deacetylation	258
4.3 CR differentially promotes or represses histone methylation	259
5. CR modulates non-coding RNA expression.....	259
5.1 Non-coding micro RNA (miRNA) expression in CR.....	259
5.2 Long non-coding RNA (lncRNA) expression in CR.....	260
6. Conclusions	260
References.....	260
CHAPTER 17 Dietary restriction in the epigenomic regulation of cardiovascular diseases	269
<i>Ken Shimura</i>	
1. Dietary restriction is an established anti-aging nutritional intervention.....	269
2. Cardiovascular protection afforded by CR.....	270
2.1 Effects of CR on vascular aging and atherosclerosis	270
2.2 Effects of CR on cardiac aging.....	271
2.3 Effects of CR on myocardial ischemic tolerance and the innate adaptive response to ischemia/reperfusion	272
3. Molecular mechanisms by which CR confers cardiovascular protection.....	273
3.1 Essential mechanisms of CR-induced cardiovascular protection.....	273
3.2 Epigenomic regulation of the cardiovascular system by CR	277
4. Potential for CR mimetics as epigenomic modulators.....	280
Acknowledgments.....	282
References.....	282
CHAPTER 18 Epigenomic adaptations of exercise in the control of metabolic disease and cancer.....	289
<i>Ivan Dimauro, Maria Paola Paronetto and Daniela Caporossi</i>	
1. PA and epigenetic modification.....	289
1.1 DNA methylation induced by PA	290
1.2 Histone post-translational modification induced by PA	292
1.3 Modulation of miRNA expression induced by PA	293
2. Epigenomic adaptation to exercise in metabolic disease.....	295
2.1 DNA methylation and PA in metabolic disease	296
2.2 Histone acetylation and PA in metabolic disease.....	298
2.3 miRNA and PA in metabolic disease.....	299
3. Epigenomic adaptation to exercise in cancer	301
3.1 DNA methylation and PA in cancer	301
3.2 Histone acetylation and PA in cancer.....	303
3.3 miRNA and PA in cancer.....	304
4. Concluding remarks	305
References.....	305

SECTION VII Macro- and micronutrients as epigenomic regulators of health and disease

CHAPTER 19 B-vitamins & one-carbon metabolism: impacts on the epigenome during development.....	319
<i>Karilyn E. Sant and Olivia S. Anderson</i>	
1. Introduction	319
1.1 The early epigenome	319
1.2 One-carbon metabolism	320
1.3 Chapter goals	321
2. Folate	321
2.1 Sources	321
2.2 Folate & OCM	322
2.3 Folate & DNA methylation	323
3. Choline	326
3.1 Sources	326
3.2 Choline & OCM	326
3.3 Epidemiological evidence	326
3.4 Animal models	327
4. Betaine	328
4.1 Sources	328
4.2 Betaine & OCM	328
4.3 Epidemiological evidence	329
4.4 Animal studies	329
5. Vitamin B12	329
5.1 Sources	329
5.2 Vitamin B12 & OCM	329
5.3 Epidemiologic evidence	330
5.4 Animal studies	330
6. Conclusion	330
References	331
CHAPTER 20 Food bioactives in the epigenomic regulation of metabolic disease	337
<i>Levi Evans and Bradley S. Ferguson</i>	
1. Introduction	337
2. Food bioactive epigenomic regulators	338
2.1 Curcumin	338
2.2 Resveratrol	340
2.3 EGCG	343
3. Summary	345
References	346

CHAPTER 21 Stilbenoids as dietary regulators of the cancer epigenome 353

Megan Beetch, Sadaf Harandi-Zadeh, Kate Shen and Barbara Stefanska

- 1. Introduction 353
- 2. Stilbenoids as regulators of the epigenome 355
 - 2.1 DNA methylation 355
 - 2.2 Covalent histone modifications 359
 - 2.3 MicroRNAs 361
- 3. Conclusions and future directions 363
- References 365

CHAPTER 22 Regulation of non-coding RNAs by phytochemicals for cancer therapy 371

Sumit S. Verma, Vipin Rai, Kamla Kant Shukla and Subash C. Gupta

- 1. Introduction 371
- 2. Phytochemicals, miRNAs and cancer 372
 - 2.1 Curcumin, miRNAs and cancer 372
 - 2.2 Genistein, miRNAs and cancer 373
 - 2.3 Honokiol, miRNAs and cancer 374
 - 2.4 Other phytochemicals, miRNAs and cancer 374
 - 2.5 Concluding remarks 375
- 3. Phytochemicals, lncRNAs and cancer 375
 - 3.1 Phytochemicals, lncRNAs and breast cancer 375
 - 3.2 Phytochemicals, lncRNAs and bladder cancer 375
 - 3.3 Phytochemicals, lncRNAs and other cancers 376
 - 3.4 Concluding remarks 376
- 4. Conclusions 376
- References 377

CHAPTER 23 Short chain fatty acids as epigenetic and metabolic regulators of neurocognitive health and disease 381

Maria M. Mihaylova and Matthew S. Stratton

- 1. Introduction 381
 - 1.1 Short chain fatty acid – basics 381
 - 1.2 Neurocognition and mood disorders 383
- 2. SCFAs – molecular mechanisms 385
 - 2.1 SCFAs – metabolism 385
 - 2.2 SCFAs – revisiting the carnitine shuttle 387
 - 2.3 SCFAs – receptor binding 387
- 3. SCFAs – epigenetic regulators of disease 388
 - 3.1 SCFAs – enzyme activity 388
 - 3.2 SCFAs – acylation and gene expression 389

4. SCFAs — recent relevant studies	389
5. SCFAs — potential side effects and concerns for clinical use	391
6. Conclusion	391
References	392

SECTION VIII Diet, epigenetics and the microbiome

CHAPTER 24 Diet-microbiome interactions and the regulation of the epigenome..... 401

*Iara Cassandra V. Ibay, Elesa Poteres, Allison Isabelli and
Kristina Martinez-Guryn*

1. Introduction	401
2. Characteristics of the gut microbiota	401
3. Impact of gut microbes on epigenetics	402
4. Dietary impact on the gut microbiota	403
5. Diet-microbe interactions that regulate the epigenome	404
5.1 Short chain fatty acids	404
5.2 Isothiocyanates	404
5.3 Dietary fat	404
6. Conclusion	405
References	405

CHAPTER 25 Gut dysbiosis and its epigenomic impact on disease 409

Matthew A. Odenwald and Christopher G. Chapman

1. Introduction	409
2. The microbiome composition is dynamic and modifiable	409
2.1 Microbiome colonization	409
2.2 Antibiotic exposure modifies the microbiome	410
2.3 Diet-induced modification of the microbiome	411
2.4 Host epithelia have the potential to regulate microbiota composition	411
3. Epigenetic mechanisms	412
4. Common microbial metabolites affect host epigenetics	412
5. Epigenetic links between microbiome composition and disease activity	413
5.1 Colorectal cancer	413
5.2 Inflammatory bowel disease	414
5.3 Obesity	416
6. Conclusion	417
References	418

CHAPTER 26 Microbiota, the brain and epigenetics	423
<i>Tijs Louwies, Anthony C. Johnson, Albert Orock, Tian Yuan and Beverley Greenwood-Van Meerveld</i>	
1. Introduction	423
2. The development and functions of the gut microbiota	424
2.1 Gut microbiota development occurs during several stages in life	424
2.2 The gut microbiota performs essential functions for its host	425
3. The gut microbiota and the brain	425
3.1 The microbiota-gut-brain axis	425
3.2 The gut microbiota influences neurodevelopment	428
3.3 Disturbances in the gut microbiota cause neurodevelopmental and mood disorders	431
4. The gut microbiota, epigenetics and the brain	432
4.1 Epigenetic changes: DNA methylation, histone modifications and non-coding RNAs	432
4.2 The gut microbiota can modulate the epigenome	434
4.3 The epigenetic potential of gut microbiota in the brain – parallels from other studies	434
5. Summary and conclusions	435
References	436
Index	445
