

Contents

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
1. Phase-separated condensates of metabolic complexes in living cells: Purinosome and glucosome	1
Songon An, Miji Jeon, Erin L. Kennedy, and Minjoung Kyoung	
1. Introduction	2
2. Visualization of metabolic condensates in living human cells: Purinosome and Glucosome	3
3. High-content image analysis of single cells	11
4. Quantitative analysis of metabolic condensates in single cells	12
5. Discussion	14
6. Conclusion	16
Acknowledgments	16
References	17
2. Synthetic probe development for measuring single or few-cell activity and efflux	19
Alison Lui, Jeffrey Wang, Linda Chio, and Markita P. Landry	
1. Introduction	20
2. Single-walled carbon nanotubes as protein efflux sensors	22
3. Sensor array preparation	27
4. Conclusion	38
References	38
3. Enzymatic activity in single cells	43
Josephine Geertsens Keller, Magnus Stougaard, and Birgitta R. Knudsen	
1. Introduction	44
2. Materials	46
3. Methods	48
4. Notes	55
Acknowledgment	56
References	56

4. Single-cell assays using integrated continuous-flow microfluidics	59
Ee Xien Ng, Myat Noe Hsu, Guoyun Sun, and Chia-Hung Chen	
1. Single-cell multiplexed assay in droplets	62
2. Continuous-flow microfluidic system (drop-screen system)	66
3. Computational algorithm	72
4. Patient sample profiling	76
5. Hydrogel-based sensing for the detection of proteins secreted from single cells	80
6. Conclusions	91
References	92
5. Single-cell activity screening in microfluidic droplets	95
Stefanie Neun, Tomasz S. Kaminski, and Florian Hollfelder	
1. Introduction	96
2. Materials	101
3. Methods	103
4. Notes	109
References	111
6. The microfluidic capture of single breast cancer cells for multi-drug resistance assays	113
Karan Parekh, Hamide Sharifi, Avid Khamenehfar, Timothy V. Beischlag, Robert T.M. Payer, and Paul C.H. Li	
1. Introduction	114
2. Materials	116
3. Methods	119
4. Analysis and discussion of microfluidic assay results	122
5. Maintenance of the glass microfluidic chip	124
6. Additional notes	125
Acknowledgment	126
References	126
7. Single-cell proteolytic activity measurement using microfluidics for rare cell populations	129
Yu-Chih Chen and Euisik Yoon	
1. Introduction	130
2. Design and operation of the single-cell proteolytic activity assay chip	132

3. Fabrication of the single-cell proteolytic activity chip	134
4. Measurement of single-cell proteolytic activity	138
5. Summary and conclusion	141
Acknowledgments	142
References	142
8. Microfluidic technology for investigation of protein function in single adherent cells	145
Aldo Jesorka, Inga Pöldsalu, and Irep Gözen	
1. Introduction	146
2. Protein function and single cell analysis	149
3. Technology overview	150
4. Superfusion techniques and hydrodynamic confinement	155
5. The multifunctional pipette	158
6. Application examples	159
7. Future technology prospects	167
Acknowledgments	168
Conflict of interest statement	168
References	168
9. Nanokits for the electrochemical quantification of enzyme activity in single living cells	173
Rongrong Pan and Dechen Jiang	
1. Introduction	174
2. Nanokits for quantification of enzyme activity at single cells and lysosomes	175
3. Conclusion	187
Acknowledgment	188
References	188
10. Design of an automated capillary electrophoresis platform for single-cell analysis	191
David H. Abraham, Matthew M. Anttila, Luke A. Gallion, Brae V. Petersen, Angela Proctor, and Nancy L. Allbritton	
1. Introduction	192
2. The chemical cytometry instrumentation	194
3. Microwell fabrication	201
4. Fluorescence detection	205
5. Capillary electrophoresis	209
6. Hardware and signal processing	212

7. Future perspectives	216
Acknowledgments	217
References	217
11. Microelectrophoretic single-cell measurements with microfluidic devices	223
Jay Sibbitts, Jalal Sadeghi, and Christopher T. Culbertson	
1. Introduction	224
2. Importance and analysis of intracellular NO	225
3. Device overview	226
4. Materials and methods	229
5. Notes	238
6. Conclusion	239
Acknowledgments	239
References	240
12. Chemical probes for spatially resolved measurement of active enzymes in single cells	243
Gang Li and Raymond E. Moellering	
1. Introduction	244
2. Activity-dependent proximity ligation (ADPL) platform	246
3. Protocol	251
4. Summary and conclusions	260
Acknowledgments	261
References	261
13. Single-cell proteomics in complex tissues using microprobe capillary electrophoresis mass spectrometry	263
Camille Lombard-Banek, Sam B. Choi, and Peter Nemes	
1. Introduction	264
2. Materials and equipment	267
3. Procedures	272
4. Representative results	284
5. Conclusions	287
Acknowledgments	288
References	288

14. Electroosmotic extraction coupled to mass spectrometry analysis of metabolites in live cells 293

Ruichuan Yin, Venkateshkumar Prabhakaran, and Julia Laskin

1. Introduction 294
2. Experimental setup for live cell analysis 296
3. Preparation of the nanopipettes 299
4. Establishing calibration curves 301
5. Quantitative analysis of metabolites at a single-cell level 303
- References 306
