| <i>Aniket Bhattacharya, Gaura Chaturvedi, Khushboo Singhal and Rajesh Pandey</i> |            |
| Introduction.....                                                                | 371        |
| Biological material to study RNA.....                                            | 372        |
| How to deal with RNases?.....                                                    | 374        |
| Techniques.....                                                                  | 374        |
| RT-qPCR.....                                                                     | 374        |
| Northern blotting.....                                                           | 377        |
| Dot blot hybridization.....                                                      | 378        |
| Poly-A <sup>+</sup> selection.....                                               | 378        |
| In vitro transcription.....                                                      | 379        |
| In vitro translation.....                                                        | 379        |
| RNAse protection assay.....                                                      | 379        |
| In-situ hybridization (ISH).....                                                 | 380        |
| RNA immunoprecipitation (RIP).....                                               | 381        |
| RNAi.....                                                                        | 381        |
| A brief overview of sequencing technologies.....                                 | 382        |
| First generation sequencing.....                                                 | 382        |
| Next (second) generation sequencing.....                                         | 383        |
| Third generation sequencing.....                                                 | 384        |
| NGS strategies to investigate RNA.....                                           | 384        |
| Library preparation.....                                                         | 385        |
| Sequencing and analysis.....                                                     | 386        |

|     |                                                                |            |
|-----|----------------------------------------------------------------|------------|
| 52  | Single cell RNAomics .....                                     | 387        |
| 53  | RNA structure .....                                            | 388        |
| 53  | RNA modifications .....                                        | 389        |
| 55  | Conclusion .....                                               | 389        |
| 55  | Acknowledgments.....                                           | 391        |
| 56  | References.....                                                | 391        |
| 57  | <b>CHAPTER 17 Industry perspective .....</b>                   | <b>397</b> |
| 57  | <i>Praveen Gupta and Debjani Saha</i>                          |            |
| 59  | Introduction.....                                              | 397        |
| 59  | Evolution of technologies in studying RNA over the years ..... | 397        |
| 60  | Future technologies.....                                       | 400        |
| 61  | How is technology helping transcend boundaries?.....           | 401        |
| 61  | Importance of academia-industry partnership.....               | 406        |
| 62  | Feedback channel between the equal stakes partner .....        | 408        |
| 62  | Conclusion .....                                               | 409        |
| 63  | Questions for students .....                                   | 410        |
