Contents

1. Introduction	2
2. <i>Geobacter</i> taxonomy, revisited	5
3. Type strains and model representatives of <i>Geobacter</i> species	18
3.1 Brief description of type strains for species in the genus <i>Geobacter</i>	18
3.2 Model representatives	20
3.2.1 <i>G. metallireducens</i> GS-15	20
3.2.2 <i>G. sulfurreducens</i> PCA	22
3.2.3 <i>G. lovleyi</i> SZ	23
4. Electron donors and acceptors supporting <i>Geobacter</i> growth and electroactivity	24
4.1 Electron donors	26
4.1.1 A taste for acetate	26
4.1.2 Other fermentation products serving as electron donors	28
4.1.3 Aromatic compounds	31
4.2 Electron acceptors and mechanisms of electron transfer	37
4.2.1 Iron and manganese oxides	37
4.2.2 Uranium and toxic metals	48
4.2.3 Electrode reduction	52
4.2.4 Oxygen tolerance and respiration	54
4.2.5 Reductive dechlorination	56
4.2.6 Nitrate ammonification	57
5. Regulatory networks adaptively modulating the <i>Geobacter</i> physiology	59
5.1 Transcriptional regulators	59
5.2 Sigma factors	63
5.3 Signal transduction systems	66
5.4 Riboswitches	69
6. (Electro)symbiotic interactions involving <i>Geobacter</i>	70
7. Exploiting the respiratory physiology of <i>Geobacter</i> in biotechnology	73
7.1 Bioremediation	73
7.2 Bioenergy	75
7.3 Bioelectronic materials	76
Acknowledgments	78
References	78
