1. New insights into the molecular physiology of sulfoxide reduction in bacteria

1

Ulrike Kappler, Marufa Nasreen, and Alastair McEwan

1. Sulfoxides in biology	2
2. Sulfoxide repair	4
3. Mo-dependent sulfoxide reductases	18
4. Sulfoxide reduction and bacterial pathogenesis	33
5. Conclusions	38
Acknowledgments	38
References	38

2. *Escherichia coli* DosC and DosP: a role of c-di-GMP in compartmentalized sensing by degradosomes

53

Marie-Alda Gilles-Gonzalez and Eduardo H.S. Sousa

Abbreviations	54
1. Introduction	54
2. The canonical degradosome	55
3. Important associates of degradosomes	56
4. Oxydegradosomes	57
5. PNPase is a target for c-di-GMP	61
6. Oxydegradosomes and c-di-GMP regulation: the big picture	63
Acknowledgment	65
References	65

3. A brief survey of the "cytochrome"

69

Catarina M. Paquete, Giovanni Rusconi, Ana V. Silva, Ricardo Soares, and Ricardo O. Louro

Abbreviations	70
1. Importance	70
2. Diversity of MHC	74
3. Maturation	90
4. Roles of MHC	96
5. Conclusions	119
References	120

4. Bacterial nitrous oxide respiration: electron transport chains and copper transfer reactions	137
Sascha Hein and Jörg Simon	
List of Abbreviations	138
1. Introduction	139
2. The nitrous oxide reductase (NosZ) family	145
3. The diversity of <i>nos</i> gene clusters reveals Nos proteins specific for clade I or clade II	147
4. Nitrous oxide respiring bacteria	154
5. Electron transport routes to nitrous oxide reductase	158
6. Copper ions and the functional maintenance of nitrous oxide reductase	165
7. Cellular organization of nitrous oxide respiration	167
8. Perspectives	167
Acknowledgments	169
References	169
5. Multiple degrees of separation in the central pathways of the catabolism of aromatic compounds in fungi belonging to the Dikarya sub-Kingdom	177
Tiago M. Martins, Celso Martins, and Cristina Silva Pereira	
1. Catabolism of aromatic compounds in Dikarya—introduction	178
2. Reviewing the catabolism of aromatic compounds in Dikarya in the postgenomic era	181
3. Ubiquity and significance of the catabolism of aromatic compounds in Dikarya	187
4. Reviewing the central pathways for the catabolism of aromatic compounds in Dikarya	190
5. Conclusions and future perspectives	196
Acknowledgments	197
References	198
6. Dissimilatory reduction of sulfate and zero-valent sulfur at low pH and its significance for bioremediation and metal recovery	205
D. Barrie Johnson and Irene Sánchez-Andrea	
List of Abbreviations	206
1. The biogenic sulfur cycle in low pH environments	206
2. Biosulfidogenesis in low pH environments	207
3. Isolation and cultivation of acidophilic sulfidogens: problems and solutions	210

4. Electron donors used to fuel biosulfidogenesis at low pH	213
5. Alternative electron acceptors for sulfidogenesis at low pH	214
6. Classified and other documented species of sulfate- and sulfur-reducing acidophilic prokaryotes	216
7. Roles of acidophilic sulfidogenic bacteria in remediating low pH waste waters	219
8. Laboratory-scale low pH sulfidogenic bioreactors	222
9. Future prospects	227
References	227
7. The functional diversity of the prokaryotic sulfur carrier protein TusA	233
Tomohisa Sebastian Tanabe, Silke Leimkühler, and Christiane Dahl	
Abbreviations	234
1. Introduction	235
2. The TusA protein in general	238
3. TusA in biosynthetic pathways	242
4. TusA in pathways of inorganic sulfur metabolism	250
5. TusA in additional context	261
6. TusA phylogeny	264
7. Conclusions	266
Acknowledgments	267
References	267
8. Roles and regulation of Spx family transcription factors in <i>Bacillus subtilis</i> and related species	279
Daniel F. Rojas-Tapias and John D. Helmann	
1. Introduction	280
2. <i>Bacillus subtilis</i> Spx: multilevel control of an important global regulator	282
3. Spx orthologs and paralogs	298
4. Perspectives	316
Acknowledgments	316
References	317
9. Oxygen regulatory mechanisms of nitrogen fixation in rhizobia	325
Paul J. Rutten and Philip S. Poole	
1. Introduction	326
2. The FixL-FixJ and hybrid FixL-FixK cascades	333
3. The FixK transcription factor	345

4. The FnrN transcription factor	350
5. The NifA transcription factor	357
6. Conclusions and perspectives	365
Acknowledgments	367
References	368
