<i>Contributors</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
1. Biophysical regulation of epidermal fate and function	1
John T. Connelly	
1. Introduction	1
2. Mechano-sensing across multiple length scales	2
3. Mechanisms of mechanotransduction and downstream pathways	9
4. Mechanobiology in skin disease	16
5. Conclusions and future perspectives	18
References	19
2. Epidermal stem cell lineages	31
Lalhaba Oinam, Gopakumar Changarathil, Yen Xuan Ngo, Hiromi Yanagisawa, and Aiko Sada	
1. Introduction	32
2. Structure of skin and its stem cells	32
3. Experimental techniques in epidermal stem cell biology	39
4. Stem cell dynamics in the mouse interfollicular epidermis	46
5. Epidermal stem cells in injury repair	54
6. Current knowledge on human epidermal stem cells	56
7. Epidermal stem cells in cancer and aging	58
8. Conclusions	60
Acknowledgments	60
References	61
3. Molecular aspects governing epidermal stem cell niches	73
Paola Kuri, Gabriella Rice, and Panteleimon Rempolas	
1. Introduction	73
2. Function and architecture of the epidermis	76
3. Models and experimental approaches to study skin stem cell physiology	78
4. Skin morphogenesis and the emergence of stem cell niches	81
5. Adult stem cell niches	82
6. Regulation of the niche	93

7. Cell plasticity: Wound healing and beyond	98
8. Conclusion	100
References	101
4. Dermal papilla regulation of hair growth and pigmentation	115
Jamien Lim, Krystle Joy Ng, and Carlos Clavel	
1. Stem cell niches	115
2. Role of DP cells during skin embryogenesis	116
3. Dermal papilla role and signaling during the hair follicle cycle	121
4. DP heterogeneity and the new microniches	125
5. DP regulation of hair follicle pigmentation	126
6. DP perspectives as a therapeutic tool against hair loss	129
References	130
Further reading	138
5. Krox20 in epithelial and glial stem cells and their niches	139
Chung-Ping Liao, Edem Tchegnon, and Lu Q. Le	
1. Introduction	139
2. The physiological function of Krox20 and its expression during development	140
3. Molecular functions of Krox20 in key biological signaling pathways	144
4. Krox20 in stem/progenitor cell differentiation	145
5. Krox20 in epidermal stem cells and their niches	147
6. Krox20 lineage cells provide an essential niche for mature melanocytes in the hair follicle	149
7. Conclusion	150
Acknowledgments	150
References	151
6. Dermal niche signaling and epidermal stem cells	157
Sophie Frech, Agnes Forsthuber, Ana Korosec, and Beate M. Lichtenberger	
1. Skin architecture and cellular heterogeneity	157
2. Dermal fibroblast subsets	160
3. Dermal signaling in embryonic skin development and hair follicle morphogenesis	165
4. Epidermal-dermal crosstalk in the hair cycle	168
5. Interplay of the epidermis and the mesenchyme in wound regeneration	172
6. Dermal fibroblasts in the aging skin	176
7. Concluding remarks	181
References	182

7. Immune cells and the epidermal stem cell niche	193
Etienne C.E. Wang	
1. Introduction	194
2. Stem cell niches of the skin	194
3. Immune cells and their interactions with the niche	199
4. Immune dysregulation and stem cells	204
5. Studying immune-stem cell interactions	207
6. Conclusion	211
References	211
