Chapter 1: ATR-FTIR spectroscopy and spectroscopic imaging of proteins 1

Bernadette Byrne, James W. Beattie, Cai Li Song and Sergei G. Kazarian

1.1 Introduction	1
1.1.1 Study of protein behavior—protein in solution, film, and tissue	1
1.1.2 Interaction of proteins with infrared—understanding amide bands.....	2
1.1.3 The significance of study of protein crystallization and aggregation with new vibrational spectroscopic methods	5
1.2 ATR-FTIR spectroscopic imaging of proteins.....	7
1.2.1 Macro-ATR spectroscopic imaging.....	7
1.2.2 Micro-FTIR spectroscopic imaging.....	15
1.3 Further applications	17
1.3.1 Monitoring low-concentration protein conformational change with QCL spectroscopy; potential of micro-ATR-FTIR imaging for analysis of tissues	17
1.4 Conclusions	19
Acknowledgments.....	19
References	20

Chapter 2: Light-induced difference Fourier-transform infrared spectroscopy of photoreceptive proteins 23

Hideki Kandori and Kota Katayama

2.1 Introduction	23
2.2 Methods: light-induced difference Fourier-transform infrared spectroscopy.....	25
2.2.1 Sample preparation	25
2.2.2 Experimental measurements.....	27

2.3	Microbial rhodopsins	28
2.3.1	Bacteriorhodopsin	28
2.3.2	Other microbial rhodopsins	34
2.4	Animal rhodopsins	38
2.4.1	Bovine rhodopsin	38
2.4.2	Primate color visual pigments	41
2.5	Flavoproteins	43
2.5.1	LOV domain	44
2.5.2	BLUF domain	45
2.5.3	Photolyase/cryptochrome	47
2.6	Concluding remarks	48
	Acknowledgment	49
	References	49
 Chapter 3: Quantum cascade laser-based infrared transmission spectroscopy of proteins in solution.....		59
<i>Andreas Schwaighofer and Bernhard Lendl</i>		
3.1	Quantum cascade lasers and their advantages for mid-infrared transmission measurements	59
3.2	Steady-state broadband infrared transmission spectroscopy of the protein amide bands	64
3.2.1	External cavity-quantum cascade laser-based infrared transmission spectroscopy of proteins recorded in sweep mode.....	64
3.2.2	QCL-based infrared transmission spectroscopy of proteins recorded in step-and-measure mode with microfluidic modulation	73
3.3	Time-resolved laser-based infrared spectroscopy to monitor protein dynamics....	74
3.4	Time-resolved infrared spectroscopy of protein dynamics by dual-comb spectroscopy	81
3.5	Conclusions and future developments	84
	References	85
 Chapter 4: Theoretical simulation of protein two-dimensional infrared spectroscopy.....		89
<i>Zhijun Pan and Wei Zhuang</i>		
4.1	Introduction	89
4.2	Theoretical simulation	92
4.2.1	Hamiltonian construction	92
4.2.2	Calculation of third-order optical response functions	98

4.2.3	Cumulant expansion of Gaussian fluctuation of third-order response functions	101
4.2.4	The numerical integration of the Schrödinger equation	103
4.2.5	The stochastic Liouville equations	107
4.2.6	Applications of the statistical mechanic methods for longer dynamics or more comprehensive configuration ensembles	109
4.3	Future perspective	112
	Acknowledgments	114
	References	114

Chapter 5: Infrared spectroscopy and imaging for understanding neurodegenerative protein-misfolding diseases 121

Lisa M. Miller

5.1	Introduction to Fourier transform infrared spectroscopy and protein misfolding	121
5.1.1	In vitro studies	121
5.1.2	Isotopic labeling	122
5.1.3	Infrared microspectroscopy	123
5.1.4	Infrared nanospectroscopy	124
5.2	Applications of Fourier transform infrared spectroscopy to neurodegenerative diseases	126
5.2.1	Alzheimer's disease	126
5.2.2	Cerebral amyloid angiopathy	129
5.2.3	Parkinson's disease	130
5.2.4	Amyotrophic lateral sclerosis	131
5.2.5	Prion diseases	133
5.3	Clinical imaging and diagnosis	136
	References	137

Chapter 6: Near-infrared spectroscopy and imaging in protein research 143

Mika Ishigaki and Yukihiro Ozaki

6.1	Introduction	143
6.2	Applications of near-infrared spectroscopy to protein science	145
6.2.1	How to apply near-infrared spectroscopy to protein science	145
6.2.2	Near-infrared spectral analysis	146
6.2.3	Near-infrared bands due to amide groups	147
6.2.4	Thermal denaturation	148

6.2.5	Protein hydration study of human serum albumin by near-infrared spectroscopy	151
6.2.6	Near-infrared studies of protein secondary structure	153
6.3	Near-infrared imaging.....	153
6.3.1	Advantages of near-infrared imaging	153
6.3.2	Instruments for near-infrared imaging.....	154
6.4	Application of near-infrared imaging to embryogenesis of fish eggs	155
6.4.1	Nonstaining visualization of embryogenesis in Japanese medaka (<i>Oryzias latipes</i>) fish egg by near-infrared imaging	155
6.4.2	Near-infrared images of the influence of bioactivity on water molecular structure	159
6.4.3	High-speed near-infrared imaging of the embryonic development in fertilized fish eggs	162
6.4.4	Near-infrared in vivo imaging of blood flow and molecular distribution in a developing fish egg using an imaging-type two-dimensional Fourier spectrometer	166
6.5	Future prospects.....	169
	References	170

Chapter 7: Vibrational imaging of proteins: changes in the tissues and cells in the lifestyle disease studies.....177

Katarzyna Majzner, Krzysztof Czamara, Marta Z. Pacia, Jakub Dybas, Ewelina Bik, Karolina Chrabaszcz, Ewelina Wiercigroch, Aleksandra Dorosz, Adrianna Wislocka, Katarzyna M. Marzec, Kamilla Malek and Malgorzata Baranska

7.1	Introduction	177
7.2	Raman in vitro studies of the cell apoptosis.....	180
7.3	An effect of fixation on endothelial cells	183
7.4	Blood plasma proteins and their diagnostic perspectives.....	185
7.5	Protoporphyrin proteins in leukocytes.....	190
7.6	Resonance Raman spectroscopy in iron-containing proteins in tissues and cells	193
7.7	Characterization of lung proteins altered by cancer cell infiltration	198
7.8	Proteins of endothelium studied ex vivo	202
7.9	Fourier-transform infrared microscopy of proteins	205
7.10	Conclusions and perspectives.....	211
	Acknowledgments.....	211
	References	212

Chapter 8: Interpretation of vibrational optical activity spectra of proteins219*Jana Hudecová and Petr Bouř*

8.1	Introduction	219
8.2	Theory and calculations	221
8.3	Small molecules.....	228
8.3.1	Flexible molecules, Boltzmann averaging	229
8.3.2	Solvent models, clusters.....	229
8.4	Large molecules.....	232
8.5	Semiempirical approaches	234
8.5.1	Transition dipole coupling	234
8.5.2	Cartesian coordinate tensor transfer	234
8.5.3	Molecules in molecules.....	239
8.6	Conclusions	241
	Acknowledgment	242
	References	242

Chapter 9: Nanoscale analysis of protein self-assemblies249*Ewelina Lipiec*

9.1	Introduction	249
9.2	Analysis of microscopic steps of abnormal protein aggregation at the nanoscale—a comparison of various experimental approaches	252
9.2.1	Thioflavin-T—based kinetic measurements	252
9.2.2	Scanning probe microscopy	252
9.2.3	Superresolving fluorescence microscopy.....	254
9.2.4	Cryoelectron microscopy	254
9.2.5	Nanoscale nuclear magnetic resonance	254
9.2.6	X-ray spectroscopy	255
9.2.7	Nano-Fourier-transform infrared spectroscopy	255
9.2.8	Atomic force microscopy—infrared.....	256
9.2.9	Hyperspectral nanospectroscopic mapping	260
9.3	Conclusions	263
	References	264
	Further reading.....	268

Chapter 10: *Vibrational spectroscopic analysis and quantification of proteins in human blood plasma and serum*.....269

James M. Cameron, Clément Bruno, Drishya Rajan Parachalil, Matthew J. Baker, Franck Bonnier, Holly J. Butler and Hugh J. Byrne

10.1	Introduction	269
10.1.1	Analysis of biofluids	270
10.1.2	Blood sample: preparation of plasma versus serum.....	271
10.1.3	Composition of plasma and serum	272
10.1.4	Pathology of plasma proteins	277
10.1.5	Vibrational spectroscopic analysis of bodily fluids	280
10.1.6	Vibrational spectroscopy	281
10.1.7	Experimental approaches	283
10.2	Biospectroscopy	288
10.2.1	Vibrational spectroscopy of proteins	290
10.2.2	Spectroscopic signature of serum	295
10.2.3	Quantitative analysis	299
10.3	Clinical translation.....	302
	References	303

Chapter 11: *Vibrational spectroscopy in protein research toward virus identification: challenges, new research, and future perspectives*.....315

Marfran C.D. Santos, Camilo L.M. Moraes, Kássio M.G. Lima and Francis L. Martin

11.1	Introduction	315
11.2	General structure of viruses	317
11.3	A brief overview of vibrational biospectroscopy.....	318
11.3.1	Infrared spectroscopy	318
11.3.2	Raman spectroscopy.....	320
11.4	Computational analysis	322
11.4.1	Preprocessing.....	322
11.4.2	Multivariate analysis techniques	324
11.4.3	Performance evaluation.....	326
11.5	Applications.....	326
11.6	Challenges	331
11.7	Future perspectives	332
	References	333

Chapter 12: Two-dimensional correlation spectroscopy of proteins337*Yeonju Park, Isao Noda and Young Mee Jung*

12.1	Introduction	337
12.2	Background.....	337
12.2.1	Generalized two-dimensional correlation spectroscopy	337
12.2.2	Basic concept of two-dimensional correlation spectroscopy	338
12.2.3	Interpretation of two-dimensional correlation spectra.....	340
12.2.4	Hetero two-dimensional correlation analysis	342
12.3	Applications of two-dimensional correlation spectroscopy to protein study	343
12.3.1	Two-dimensional infrared correlation spectroscopy in protein study ...	344
12.3.2	Two-dimensional Raman correlation spectroscopy in protein study	351
12.3.3	Two-dimensional vibrational circular dichroism and two-dimensional Raman optical activity correlation spectroscopy in protein study	353
12.3.4	Combination of two-dimensional correlation spectroscopy and principal component analysis in protein study.....	357
12.3.5	Two-dimensional heterocorrelation analysis in protein study	359
12.4	Future aspect.....	364
	References	365

Chapter 13: Resonance Raman spectroscopy of hemoglobin in red blood cells.....375*Bayden R. Wood, Kamila Kochan and Katarzyna M. Marzec*

13.1	Introduction	375
13.2	Molecular structure of oxygenated and deoxygenated hemoglobin	377
13.3	Electronic structure of hemoglobin	377
13.4	Methods of recording hemes in cells.....	379
13.5	Resonant Raman spectroscopy of hemoglobin in red blood cells	380
13.5.1	Raman band assignments of hemoglobin in red blood cells	382
13.5.2	Polarized resonance Raman spectra reveal highly ordered heme groups in red blood cell	386
13.5.3	Hemoglobin ligand modes in red blood cells revealed with near-infrared excitation	388
13.5.4	Enhanced overtone and combination modes observed in hemes using 514-nm excitation.....	388
13.6	Applications of Raman spectroscopy in red blood cell research.....	390
13.6.1	Resonance Raman spectroscopy in malaria research	390
13.6.2	Application of Raman spectroscopy to blood storage.....	398
13.6.3	Application to thalassemia and sickle cell anemia	400
13.6.4	Optical laser tweezer studies on red blood cells	404

13.6.5	Detection, differentiation, and visualization of the dysfunctional Hb adducts and its metabolites	406
13.7	Conclusion	408
	Acknowledgments	408
	References	408

Chapter 14: Ultraviolet Raman spectroscopy for understanding structure and formation mechanism of amyloid fibrils415

Joseph Handen and Igor K. Lednev

14.1	Introduction	415
14.2	Two-dimensional correlation deep ultraviolet resonance Raman spectroscopy	415
14.2.1	Fibril nucleus formation	416
14.2.2	Apparent inverse order	417
14.2.3	Extraction of characteristic times for structural changes	418
14.3	Elucidating the kinetic mechanism of early events of hen egg white lysozyme fibrillation	418
14.4	Structural characterization of fibrillar proteins	420
14.4.1	Hydrogen deuterium exchange	420
14.4.2	Bayesian source separation	420
14.4.3	Structure determination of the lysozyme fibril core	420
14.4.4	Structural variations in the cross- β core	422
14.4.5	Aromatic side chain as a reporter of local environment	426
14.5	Conformation changes of amyloid fibrils	428
14.5.1	Spontaneous refolding of amyloid fibrils from one polymorph to another	429
14.5.2	Purple fibrils and a new protein chromophore	431
14.6	Conclusions	432
	References	432

Chapter 15: Recent advances in Raman spectroscopy of proteins for disease diagnosis435

Keita Iwasaki, Hemanth Noothalapati and Tatsuyuki Yamamoto

15.1	Introduction	435
15.2	Data analysis	436
15.2.1	Preprocessing	436
15.2.2	Spectral analysis	437

15.3 Raman spectroscopy for disease diagnosis	439
15.3.1 Cancer	439
15.3.2 Diabetes	450
15.3.3 Cardiovascular diseases	451
15.3.4 Other diseases	452
15.4 Conclusions	454
References	455
 Chapter 16: Dynamics and allostery of human hemoglobin as elucidated by time-resolved resonance Raman spectroscopy	461
<i>Yasuhisa Mizutani</i>	
16.1 Introduction	461
16.2 Time-resolved resonance Raman spectrometers	463
16.3 Primary structural dynamics of hemoglobin A following the ligand dissociation	464
16.3.1 Ligand photodissociation in hemoglobin A	464
16.3.2 Structural dynamics of heme in hemoglobin A upon the photodissociation	464
16.3.3 Comparison of the primary structural dynamics in hemoglobin A to those in relating proteins	466
16.3.4 Structural response of heme pocket in HbA upon the photodissociation	466
16.4 Intersubunit communication: direct observation for the Perutz mechanism	468
16.4.1 Propagation of structural changes between subunits	468
16.4.2 Structural dynamics of subunits with ligated heme in half-ligated hemoglobin	468
16.4.3 Structural dynamics of subunits with unligated heme in half-ligated hemoglobin	471
16.4.4 Perutz's strain model	472
16.5 Dynamical coupling of tertiary and quaternary structures in hemoglobin A	472
16.5.1 Hemoglobin mutants of fixed quaternary structure	472
16.5.2 Tertiary structural changes dependent on R and T quaternary structures	473
16.6 Differences between protein dynamics upon the dissociation of O ₂ and CO	475
16.7 Summary and perspectives	478
Acknowledgments	479
References	480

Chapter 17: Immuno-SERS: from nanotag design to assays and microscopy485*Yuling Wang, Yuying Zhang and Sebastian Schlücker*

17.1	Introduction	485
17.2	Surface-enhanced Raman scattering nanotags	485
17.2.1	Surface-enhanced Raman scattering nanotags: plasmonic nanostructures	486
17.2.2	Surface-enhanced Raman scattering nanotags: Raman reporter molecules	492
17.2.3	Surface-enhanced Raman scattering nanotags: protection and stabilization.....	494
17.2.4	Surface-enhanced Raman scattering nanotags: bioconjugation to surface-enhanced Raman scattering nanotags.....	497
17.3	Immuno-SERS assay.....	499
17.3.1	Sandwich immuno-SERS assay on solid substrates.....	499
17.3.2	Protein immuno-SERS microarray	501
17.3.3	Dot-blot semisandwich immuno-SERS assay	501
17.3.4	Microfluidic immuno-SERS assay	502
17.4	Immuno-SERS microscopy	505
17.4.1	Immuno-SERS microscopy for protein localization on cells	506
17.4.2	Immuno-SERS microscopy for protein localization on tissue specimens.....	514
17.5	Summary and perspective	521
	References	523

Chapter 18: Highly localized characterization of protein structure and interaction by surface-enhanced Raman scattering529*Janina Kneipp*

18.1	Introduction	529
18.2	Local probing gives detailed information on the interaction of proteins.....	530
18.2.1	The protein corona of plasmonic nanoparticles inside living cells.....	530
18.2.2	Binding sites of serum albumins in the protein corona of nanoparticles	532
18.2.3	Concentration dependence: implications in live cells	536
18.3	Interaction of protein side chains from surface-enhanced hyper Raman scattering	537
18.3.1	Surface-enhanced hyper Raman scattering provides complementary information	537

18.3.2	Toward surface-enhanced Raman scattering spectra of protein side chains.....	539
18.4	Studies of individual protein molecules in the hot spots of nanolenses	541
18.4.1	Plasmonic nanolenses for highly localized surface-enhanced Raman scattering probing.....	541
18.4.2	Detection of single protein molecules in individual gold nanolenses...	543
	Acknowledgments.....	546
	References	546
Chapter 19: Surface-enhanced Raman scattering chemosensing of proteins.....		553
<i>Luca Guerrini and Ramon A. Alvarez-Puebla</i>		
19.1	Introduction	553
19.2	Peptide-based chemosensing	556
19.3	Antibody-based chemosensing	561
19.4	Bioreceptor-free chemosensing	565
19.5	Conclusions	565
	Acknowledgments.....	566
	References	566
Index.....		569
