Preface: More than two decades of modern tumor immunology

xxiii

1. Cytokine profiling of tumor-infiltrating T lymphocytes by flow cytometry

1

Jeremy B. Foote, Sujith Sārvesh, and Leisha A. Emens

1. Introduction 2
2. Tumor dissociation and T cell isolation 3
3. *In vitro* T cell stimulation 7
4. Combining cell surface and intracellular cytokine staining 11
5. Data acquisition and analysis 15
6. Concluding remarks 16
- References 18

2. High-throughput identification of human antigen-specific CD8⁺ and CD4⁺ T cells using soluble pMHC multimers

21

Morgane Magnin, Philippe Guillaume, George Coukos, Alexandre Harari, and Julien Schmidt

1. Introduction 22
2. Monitoring of antigen-specific CD8⁺ and CD4⁺ T cells with soluble pMHC I & II 23
3. Staining of antigen-specific CD8⁺ and CD4⁺ T cells: Materials and methods 28
4. High dimensional T-cell staining 31
5. Reversible pMHC multimer for comprehensive analysis of antigen-specific T cells 35
6. Conclusion 37
- References 38

3. In vitro assays for effector T cell functions and activity of immunomodulatory antibodies

43

Roberta Zappasodi, Sadna Budhu, Mohsen Abu-Akeel, and Taha Merghoub

1. Introduction 44
2. Functional assays for T cell co-stimulatory molecules: Principles 46
3. Functional assays for T-cell co-stimulatory molecules: Protocol 49

4. FACS compensation, set up and data analysis	53
5. Concluding remarks	57
Acknowledgments	58
Competing interests	58
References	58
4. A cytofluorimetric assay to evaluate T cell polyfunctionality	61
Belinda Palermo, Mariangela Panetta, Giulia Campo, and Paola Nisticò	
1. Introduction	62
2. Basic principles of intracellular staining	64
3. T cells and activation protocols	66
4. ICS protocols	69
5. Flow cytometric data acquisition and analysis	71
6. Concluding remarks	73
7. Notes	73
Acknowledgments	74
References	75
5. Assessment of memory formation by metabolically engineered antigen-specific CD8 T cells	77
Mathias Wenes, Pedro Romero, and Lianjun Zhang	
1. Introduction	78
2. In vitro assays	80
3. In vivo assays	85
4. Concluding remarks	88
References	88
6. Functional characterization of tumor antigen-specific T-cells isolated from the tumor microenvironment of sleeping beauty induced murine glioma models	91
Mahmoud S. Alghamri, Felipe J. Núñez, Neha Kamran, Stephen Carney, David Altshuler, Pedro R. Lowenstein, and Maria G. Castro	
1. Introduction	92
2. Generation of glioma neurospheres derived from sleeping beauty transposon mouse glioma model	94
3. Stable transfection of neurospheres with a surrogate tumor antigen	96
4. Assessment of T-cell function	97
5. Summary	103
Acknowledgments	103
References	103

7. Methods to edit T cells for cancer immunotherapy	107
Francesca Lucibello, Silvia Menegatti, and Laurie Menger	
1. Introduction	108
2. TCR-engineered T cells, MHC dependency	109
3. CAR T-cell, MHC independency	114
4. Suicide gene strategies	118
5. Genome-wide CRISPR-Cas9 engineering	119
6. Generation of CAR T cells using lentiviral strategy	120
7. Summary	124
References	124
8. Generating stem-like memory T cells with antioxidants for adoptive cell transfer immunotherapy of cancer	137
Karolina Pilipow, Eloise Scamardella, and Enrico Lugli	
1. Introduction	138
2. Protocol	145
3. Analysis	151
4. Summary	152
Acknowledgments	154
References	154
9. Reverse immunology: From peptide sequence to tumor-killing human T-cell clones	159
Christophe Vanhaver, Monica Gordon-Alonso, Alexandre Bayard, Maria Teresa Catanese, Didier Colau, Pierre van der Bruggen, and Annika M. Bruger	
1. Introduction	160
2. Identification of peptides binding to HLA molecules	162
3. Isolation of peptide-specific T-cell clones	166
4. Validation steps to identify tumor-killing T-cell clones	182
5. T-cell functional assays	187
6. Concluding remarks	191
Acknowledgments	191
References	191
Further reading	194
10. Generation of TCR-engineered reference cell samples to control T-cell assay performance	195
Nicole Bidmon, Cécile Gouttefangeas, and Sjoerd H. van der Burg	
1. Introduction	196
2. The generation of MHC-restricted TERS via TCR mRNA electroporation	197

3. Routine application of TERS controls	214
4. Summary	217
Acknowledgments	220
References	220
Further reading	221
11. <i>In vitro</i> expansion of Vy9Vδ2 T cells for immunotherapy	223
Christian Peters, Léonce Kouakanou, Hans-Heinrich Oberg, Daniela Wesch, and Dieter Kabelitz	
1. Introduction	224
2. Protocol for the Vy9Vδ2 T-cell expansion at laboratory scale	229
3. Adaptations for the clinical application	233
References	235
12. CFSE dilution to study human T and NK cell proliferation in vitro	239
Iñigo Terrén, Ane Orrantia, Joana Vitallé, Olatz Zenarruzabeitia, and Francisco Borrego	
1. Introduction	240
2. CFSE staining and cell culture	243
3. Flow cytometry staining	244
4. Proliferation analysis	245
5. Concluding remarks	249
6. Notes	251
Acknowledgments	253
Conflict of interests	253
References	253
13. Rapid isolation and enrichment of mouse NK cells for experimental purposes	257
Maite Alvarez, Maria C. Ochoa, Luna Minute, Ignacio Melero, and Pedro Berraondo	
1. Introduction	258
2. IL-15	260
3. Sushi-IL15-Apo construction	261
4. Hydrodynamic delivery	263
5. NK cell expansion and isolation protocol	264
6. NK cell characterization	266

7. Conclusions	271
Acknowledgments	272
Conflict of interest disclosure	272
References	272
14. Assessment of NK cell-mediated cytotoxicity by flow cytometry after rapid, high-yield isolation from peripheral blood	277
Peter Holicek, Iva Truxova, Lenka Kasikova, Sarka Vosahlikova, Cyril Salek, Jana Rakova, Monika Holubova, Daniel Lysak, Isabelle Cremer, Radek Spisek, and Jitka Fucikova	
1. Introduction	278
2. NK cell isolation: Principle	278
3. NK cell isolation: Protocol	279
4. NK cell cytotoxicity: Principles	280
5. NK Cell cytotoxicity: Protocols	281
6. Concluding remarks	284
7. Notes	286
Acknowledgments	286
References	287
15. Two-dimensional dynamic evaluation of natural killer cell-mediated lysis of adherent target cells	289
Alexandra Frazao, Louise Rethacker, and Anne Caignard	
1. Introduction	290
2. Assessment of NK cell-mediated lysis using cell impedance dynamic measure	294
3. Concluding remarks	300
4. Notes	301
Acknowledgments	301
References	301
16. Rapid isolation of mouse ILCs from murine intestinal tissues	305
Kyle Burrows, Pailin Chiaranunt, Louis Ngai, and Arthur Mortha	
1. Introduction	306
2. Identification of gut innate lymphoid cell populations by flow cytometry	312
3. Protocol	314
Acknowledgments	323
References	323

17. Detecting and analyzing murine innate lymphoid cells	329
Alejandra Gomez-Cadena, Pedro Romero, Sara Trabanelli, and Camilla Jandus	
1. Introduction	330
2. Identification, isolation and stimulation of murine ILCs	331
References	342
18. A cytofluorimetric assay to evaluate intracellular cytokine production by NK cells	343
Christian Sordo-Bahamonde, Seila Lorenzo-Herrero, Segundo González, and Alejandro López-Soto	
1. Introduction	344
2. Materials and methods	345
3. Assessment of cytokine production in NK cells by intracellular staining	347
4. Notes	350
References	354
19. Applications of microfluidic devices in advancing NK-cell migration studies	357
Xiaou Ren, Abdulaziz Alamri, Jolly Hipolito, Francis Lin, and Sam K.P. Kung	
1. Introduction	358
2. Preparation of microfluidic devices	360
3. Generation of chemoattractant gradients	363
4. Preparations of cells	363
5. Experimental setup	364
6. Data analysis	366
7. Conclusion	368
Acknowledgments	369
References	369
20. Complementary approaches to study NKT cells in cancer	371
Jay A. Berzofsky, Purevdorj B. Olkhanud, and Masaki Terabe	
1. Introduction	372
2. Type I NKT cells	374
3. Type II NKT cells	378
4. NKT cells in cancer	380

5. Type II NKT cells	381
6. Conclusion	384
References	384
21. Assessment of IFN-γ and granzyme-B production by <i>in "sitro"</i> technology	391
Claudia Galassi, Gwenola Manic, Martina Musella, Antonella Sistigu, and Ilio Vitale	
1. Introduction	393
2. Materials	396
3. Methods	399
4. Discussion and concluding remarks	406
Notes	407
Acknowledgments	411
References	411
22. Assessment of IFNγ responsiveness in patient-derived xenografts	415
Jordan J. Cardenas, Camila Robles-Oteiza, and Katerina Politi	
1. Introduction	416
2. Establishment and maintenance of PDX lines	417
3. In vivo stimulation of PDX lines with interferon gamma	419
4. Protocol	420
5. Analysis	423
6. Summary	426
Acknowledgments	426
References	426
23. Real-time cell analysis (RTCA) to measure killer cell activity against adherent tumor cells <i>in vitro</i>	429
Hans-Heinrich Oberg, Christian Peters, Dieter Kabelitz, and Daniela Wesch	
1. Introduction	430
2. Tumor cell lines	431
3. Effector cells	432
4. Protocol	434
5. RTCA-system	435
6. Summary	440
Acknowledgments	440
References	440

24. Analysis of cancer cell-intrinsic immune regulation in response to CD8+ T cell attack	443
Natalie J. Neubert, Laure Tillé, Christophe Martignier, Silvia A. Fuertes Marraco, and Daniel E. Speiser	
1. Introduction	444
2. Methods	445
3. Selection of melanoma cell lines and CD8+ cytotoxic T lymphocyte (CTL) clones	448
4. Establishment of the melanoma cell/T cell co-culture	450
5. CTL and melanoma cell viability and ratio	452
6. CTL function	454
7. Kinetic of protein expression	454
8. mRNA screen of co-cultured melanoma cells	454
9. Assessment of HLA upregulation in a larger melanoma cell panel	457
10. Discussion and conclusion	460
Acknowledgments	464
Conflict of interest	464
References	464
25. A flow cytometry-based method to screen for modulators of tumor-specific T cell cytotoxicity	467
Javier Santos, Jesús Ogando, Rosa Ana Lacalle, and Santos Mañes	
1. Introduction	468
2. From CD8+ T lymphocytes to armed CTL	469
3. Suppression of the CTL response by the PD-1/PD-L1 axis	470
4. Overview of the CTL cytotoxicity assay	471
5. Generation of stable E.G7-OVA-PD-L1-expressing cells	472
6. Generation of ex vivo-activated OT-I cells	474
7. Cytotoxicity assay	476
8. Concluding remarks	477
Acknowledgments	480
References	480
26. Evaluation of NK cell cytotoxic activity against malignant cells by the calcein assay	483
Seila Lorenzo-Herrero, Christian Sordo-Bahamonde, Segundo González, and Alejandro López-Soto	
1. Introduction	484
2. Cell culture	485

3. Isolation of peripheral blood mononuclear cells (PBMCs)	486
4. Target cell labeling	487
5. Effector/target cell co-culture	487
6. Fluorometric analysis	488
7. Concluding remarks	490
8. Notes	490
Acknowledgments	494
References	494

27. ^{51}Cr -release to monitor NK cell cytotoxicity 497

Leslie Elsner and Ralf Dressel

1. Introduction	498
2. Cell culture of target cells	500
3. Isolation of human NK cells	501
4. Isolation of murine NK cells	501
5. Activation of NK cells	502
6. ^{51}Cr -release assay	503
7. Data analysis	506
8. Concluding remarks	507
9. Notes	507
Acknowledgments	511
References	511
