<i>Preface: Life through death—Key role of cellular suicide for colonial and organismal homeostasis</i>	xi
1. The mechanisms and cell signaling pathways of programmed cell death in the bacterial world	1
Robert P. Smith, Ivana Barraza, Rebecca J. Quinn, and Marla C. Fortoul	
1. Introduction	2
2. Plasmids induce PCD to ensure their maintenance	4
3. PCD to protect against infection by bacteriophage	6
4. PCD as a mechanism to promote the infection process	11
5. PCD as a mechanism to alleviate environmental stressors	18
6. PCD during developmental processes in bacteria	22
7. PCD releases bacterial DNA into the environment	30
8. PCD to facilitate dispersal from biofilms	36
9. Inter-species activation of bacterial cell death	38
10. Future outlook	41
Acknowledgments	42
References	42
2. Transcriptional and epigenetic control of regulated cell death in yeast	55
Andreas Zimmermann, Jelena Tadic, Katharina Kainz, Sebastian J. Hofer, Maria A. Bauer, Didac Carmona-Gutierrez, and Frank Madeo	
1. Introduction	56
2. The role and hallmarks of RCD in yeast	57
3. Nuclear effectors of yeast RCD	61
4. Transcriptional regulation of yeast RCD	63
5. Epigenetic regulation of yeast RCD	69
6. Conclusion	72
Acknowledgments	72
Conflict of interest	72
References	72

3. Cell death in the avian brain with emphasis on the development and plasticity of the song control system	83
Tracy A. Larson	
1. Introduction	84
2. Why study cell death in songbirds?	85
3. The song system	86
4. Early development of the song system	89
5. Homeostasis and natural turnover in the song system	94
6. Natural plasticity of neuronal birth and death in the song system	97
7. Neural insults and damage in the song system	102
8. Future directions and conclusions	103
References	106
 4. Crosstalk between apoptosis and autophagy signaling pathways	 115
W. Douglas Fairlie, Sharon Tran, and Erinna F. Lee	
1. Introduction	116
2. Autophagy	116
3. Apoptosis	122
4. The intrinsic apoptosis pathway	122
5. Crosstalk between intrinsic apoptosis and autophagy pathways	124
6. The extrinsic apoptosis pathway	137
7. Crosstalk between extrinsic apoptosis and autophagy pathways	138
8. Concluding remarks	145
References	146
 5. The interplay of autophagy and non-apoptotic cell death pathways	 159
Dannah R. Miller, Scott D. Cramer, and Andrew Thorburn	
1. Introduction	160
2. Non-apoptotic forms of cell death	161
3. Autophagy regulation of cell death through degradation	167
4. Regulation of cell death through scaffolding and degradation-independent functions of the autophagy machinery	174
5. Conclusions	176
Acknowledgments	179
References	179

6. Redox signaling in the pathogenesis of human disease and the regulatory role of autophagy 189

Shazib Pervaiz, Gregory L. Bellot, Antoinette Lemoine,
and Catherine Brenner

1. Introduction	190
2. Cellular redox state and its regulation	191
3. Autophagy and cell fate signaling	194
4. Crosstalk between autophagy and cellular redox status	195
5. Interplay between cell death, ROS and autophagy in pathological states	198
6. Pro-autophagic molecules and therapeutic potential	204
7. Conclusions/perspectives	206
Acknowledgments	207
References	207
