<i>Preface: Life through death—Key role of cellular suicide for colonial and organismal homeostasis</i>	xi
1. Bcl-2 family proteins, beyond the veil	1
Jason Andrew Glab, Zhipeng Cao, and Hamsa Puthalakath	
1. Introduction	2
2. Cell cycle regulation	4
3. Mitochondrial function	5
4. Autophagy	6
5. Calcium regulation	8
6. Glucose and lipid metabolism	9
7. Regulation of unfolded protein response	10
8. Recent findings	12
9. Conclusion and future perspectives	13
Acknowledgments	14
References	14
2. Mcl-1 as a "barrier" in cancer treatment: Can we target it now?	23
Nikolay V. Pervushin, Viacheslav V. Senichkin, Boris Zhivotovsky, and Gelina S. Kopeina	
1. Introduction	24
2. Agents that influence the regulation of Mcl-1 expression	27
3. Mcl-1 inhibitors: Problems for clinical usage	33
4. The latest achievements in the development of small molecule inhibitors of Mcl-1	40
5. Conclusions	44
Acknowledgments	44
References	45
3. TRAIL receptor signaling: From the basics of canonical signal transduction toward its entanglement with ER stress and the unfolded protein response	57
Daniela Stöhr, Albert Jeltsch, and Markus Rehm	
1. Apoptotic cell death: The basics	58
2. Apoptosis signal transduction and caspase activation	59

3. Core signal transduction during extrinsic apoptosis	60
4. TRAIL and TRAIL receptors as members of the TNF superfamily	63
5. Mechanistic insight into canonical TRAILR activation	66
6. TRAILR signaling: Additional signaling routes to death or survival	67
7. Differential roles of TRAILR1 and TRAILR2 in signal transduction?	70
8. Regulation of TRAILR amounts and modulation of TRAILR signaling	71
9. TRAIL-based strategies for the development of anti-cancer agents	74
10. Induction of ER stress: A promising approach to sensitize cancer cells for TRAIL treatment?	77
11. Concluding comments	84
Acknowledgments	85
References	85
 4. Type 3 IP₃ receptors: The chameleon in cancer	 101
Nicolas Rosa, Flore Sneyers, Jan B. Parys, and Geert Bultynck	
1. Introduction	102
2. Role of IP ₃ receptors in cell death and survival	105
3. Expression of IP ₃ R3 in cancer cells and tissues	109
4. The role of IP ₃ R3 in cancer: Tumor suppression versus oncogenesis	121
5. Conclusions	131
Acknowledgments	132
References	132
 5. On the role of sphingolipids in cell survival and death	 149
Elisabetta Iessi, Matteo Marconi, Valeria Manganelli, Maurizio Sorice, Walter Malorni, Tina Garofalo, and Paola Matarrese	
1. Introduction	151
2. Lipid rafts and mitochondrial raft-like microdomains	152
3. Sphingolipids and lipid rafts in the regulation of apoptosis	156
4. Sphingolipids in nonapoptotic cell death	162
5. Sphingolipids in autophagy	165
6. Lipid rafts in autophagy	169
7. Sphingolipids and lipid microdomains in differentiation	171
8. Sphingolipids and diseases	174
9. Conclusions	181
Acknowledgments	181
Conflict of interest	181
Human and animal rights	181
References	182
Further reading	195

6. A lipid perspective on regulated cell death	197
Hector Flores-Romero, Uris Ros, and Ana J. García-Sáez	
1. Introduction	198
2. A lipid view for mitochondrial apoptosis	199
3. Role of lipids in nonapoptotic regulated cell death	212
4. Concluding remarks	220
Acknowledgments	221
References	221

Hector Flores-Romero

Department of Biochemistry, Universidad Nacional Autónoma de México, Facultad de Medicina, México

Ana J. García-Sáez

Instituto de Neurociencias, Universidad de Zaragoza, Zaragoza, Spain

Uris Ros

Department of Experimental Medicine, Universidad Nacional de México, México

José Antonio Gil

Department of Biochemistry, Universidad Nacional de México, Facultad de Medicina, México

María José

Centro de Estudios de la Medicina, Universidad Nacional de México, Facultad de Medicina, México

Alberto J. García

Department of Biochemistry, Universidad Nacional de México, Facultad de Medicina, México

Roberto A. Kuper

Faculty of Medicine, UNAM, Facultad de Medicina, México

Walter Maldonado

Centro de Estudios de la Medicina, Universidad Nacional de México, Facultad de Medicina, México
