SECTION I Decellularization and characterization methods

CHAPTER 1 A step-by-step protocol for generating human fibroblast cell-derived completely biological extracellular matrix scaffolds	3
Dhavan Sharma, Morgan Ferguson, Feng Zhao	

1. Introduction	4
2. Materials and methods	5
3. Evaluation of hDF derived ECM scaffold	8
4. Discussion	10
5. Conclusion	12
Acknowledgments	12
References	12

CHAPTER 2 Preparation of osteogenic matrices from cultured cells	15
Carl A. Gregory, Eoin P. McNeill, Simin Pan	

1. Introduction	16
2. Osteogenic tissue culture and relevant assays	18
3. Purification and characterization of OECM	27
4. Coating of OECM onto growth surfaces	33
5. Discussion, future prospects	38
Acknowledgments	39
References	39

CHAPTER 3 Decellularized hASCs-derived matrices as biomaterials for 3D <i>in vitro</i> approaches	45
Fátima Raquel Maia, Rui Luís Reis, Joaquim Miguel Oliveira	

1. Introduction	46
2. Materials and methods	48
3. Evaluation of effectiveness of the decellularization	51
4. Discussion	55

5. Conclusions	56
Acknowledgments	56
References	57
 CHAPTER 4 Characterization of the elastic properties of extracellular matrix models by atomic force microscopy	59
J. Otero, D. Navajas, J. Alcaraz	
1. Introduction	61
2. Material, equipments and reagents	63
3. Protocol to measure the mechanical properties of ECM models	65
4. Troubleshooting and optimization	70
5. Examples of applications	73
6. Alternative approaches	77
7. Summary	78
Acknowledgments	78
References	79
 CHAPTER 5 Glycosaminoglycan disaccharide compositional analysis of cell-derived extracellular matrices using liquid chromatography-tandem mass spectrometry	85
João C. Silva, Marta S. Carvalho, Ke Xia, Joaquim M.S. Cabral, Cláudia L. da Silva, Frederico C. Ferreira, Deepak Vashishth, Robert J. Linhardt	
1. Introduction	86
2. GAG compositional and structural analysis using LC-MS/MS	88
3. Overview of the protocol	89
4. Preparation of decellularized cell-derived matrices	89
5. Morphological characterization of cell-derived matrices	92
6. GAG disaccharide compositional analysis of cell-derived matrices	96
7. Technical considerations and possible improvements	101
8. Conclusions	102
Acknowledgments	103
References	103

SECTION II Engineering cell-derived matrices with advanced characteristics

CHAPTER 6 Engineering clinically-relevant human fibroblastic cell-derived extracellular matrices 109

Janusz Franco-Barraza, Kristopher S. Raghavan,
Tiffany Luong, Edna Cukierman

1. Introduction 111
2. Protocols for synthesis of 3D fibroblastic cell-derived ECMs (fCDMs) 112
3. Precursor techniques 150
4. Analysis and statistics 150
5. Limitations of the protocol 152
6. Alternative methods 152
7. Troubleshooting and optimization 152
8. Summary 154
- Acknowledgments 155
- References 155

CHAPTER 7 Engineering cell-derived matrices with controlled 3D architectures for pathophysiological studies 161

Enrico Almici, David Caballero, Joan Montero Boronat,
Josep Samitier Martí

1. Introduction 163
2. Background 163
3. Materials and methods 165
4. Protocol for fabrication of eCDM guiding templates 168
5. Protocol for eCDM deposition 171
6. Discussion 176
7. Conclusions 180
- Acknowledgments 182
- References 182

CHAPTER 8 Generation of fluorescent cell-derived-matrix to study 3D cell migration 185

Amélie Luise Godeau, Hélène Delanoë-Ayari,
Daniel Riveline

1. Introduction 186
2. Generation of fluorescent CDM 188

3. Characterization of cell migration in fluorescent CDM.....	194
4. Discussion.....	199
5. Conclusion.....	200
Acknowledgments.....	200
References.....	201

CHAPTER 9 Re-engineered cell-derived extracellular matrix as a new approach to clarify the role of native ECM.....205

Insung Yong, Seung Won Oh, Pilnam Kim

1. Introduction.....	206
2. Characteristics of a native extracellular matrix.....	209
3. Biochemically re-engineered cell-derived matrix.....	214
4. Mechanophysically re-engineered cell-derived matrix.....	216
5. Re-engineering by the incorporation with other systems.....	221
6. Conclusions.....	225
Acknowledgments.....	226
References.....	226

SECTION III Cell-derived matrices for biomedical applications

CHAPTER 10 Cell-derived matrices (CDM)—Methods, challenges and applications.....235

H.W. Cheng, M.T. Yuan, C.W. Li, B.P. Chan

1. Introduction.....	236
2. Cell-derived matrices—Methodological approaches.....	239
3. Discussion—Applications, challenges and future perspectives.....	250
4. Conclusions.....	253
Acknowledgments.....	254
References.....	254

CHAPTER 11 Boosting collagen deposition with a lysyl oxidase/bone morphogenetic protein-1 cocktail.....259

Tamara Rosell-García, Fernando Rodríguez-Pascual

1. Introduction.....	260
2. Generation of HEK293 cell lines overexpressing LOX and BMP1.....	262

3. Fibroblast culture, supplementation with LOX/BMP1 supernatants and assessment of collagen synthesis and deposition.....	264
4. Decellularization of fibroblast-derived matrix and its use as a substrate for the growth and differentiation of mesenchymal stem cells.....	266
5. Conclusions.....	268
Acknowledgments.....	269
References.....	269
CHAPTER 12 Generating cell-derived matrices from human trabecular meshwork cell cultures for mechanistic studies.....	271
Felix Yemanyi, Janice Vranka, VijayKrishna Raghunathan	
1. Introduction.....	273
2. Generating CDMs from trabecular meshwork cells obtained from age-matched normal or glaucomatous human donor tissues.....	275
3. Generating vehicle control- and glucocorticoid-induced CDMs from human TM cells in culture.....	283
4. Crosslinking of CDMs with genipin.....	286
5. Alternative methods/procedures.....	290
6. Troubleshooting and optimization.....	290
7. Application of CDMs in previous TM cell-ECM interaction studies.....	290
8. CDMs as optimal substrates for regenerative outcomes in the conventional outflow pathways.....	295
9. Summary.....	296
Acknowledgments.....	297
References.....	297
CHAPTER 13 Methods in cell biology: Cell-derived matrices.....	309
Elizabeth Pavez Lori�, Petra Boukamp	
1. Introduction to human skin models.....	310
2. Method of human fibroblast cell derived matrix.....	315
3. Materials, equipment and reagents.....	316
4. Protocols.....	318
5. Safety considerations and standards.....	323
6. Analysis and statistics.....	324

7. Pros and cons.....	324
8. Alternative methods/procedures.....	325
9. Troubleshooting and optimization (for the FDM).....	326
10. Summary and discussion.....	326
References.....	327
