Preface

xi

1. Viral and subviral derived small RNAs as pathogenic determinants in plants and insects

1

Paola Leonetti, Pascal Miesen, Ronald P. van Rij, and Vitantonio Pantaleo

1. Introduction	2
2. vsRNAs containing sequence-specific phenotypic determinants	5
3. Revisiting the role of VSSs in infection and disease phenotype	17
4. Small RNAs-mediated diversion of the plant RNA silencing machinery	21
5. Small RNAs from viral and non-viral endogenous sequences	22
6. Concluding remarks	26
Acknowledgments	27
References	27

2. Hijacking of host cellular components as proviral factors by plant-infecting viruses

37

Kiwamu Hyodo and Tetsuro Okuno

1. Introduction	38
2. Diversion of host defense components into viral protein complexes	40
3. Usurpation of cellular posttranslational dynamics during plant viral infections	56
4. Hijacking of host glycolytic enzymes for ATP production	65
5. Viral manipulation of intracellular ion homeostasis	67
6. Conclusions	69
Acknowledgments	71
References	71

3. Modulation of disease severity by plant positive-strand RNA viruses: The complex interplay of multifunctional viral proteins, subviral RNAs and virus-associated RNAs with plant signaling pathways and defense responses

87

Hélène Sanfaçon

1. Introduction	88
2. Evolutionary constraints driving disease severity	89

3. Regulating the impact of multifunctional viral proteins on plant intracellular structures and signaling pathways	92
4. Deploying subviral or virus-associated RNAs to manipulate symptom intensity	93
5. Selected examples of well-characterized plant-virus interactions	94
6. Concluding remarks	115
Acknowledgments	118
References	118
 4. Host protein chaperones, RNA helicases and the ubiquitin network highlight the arms race for resources between tombusviruses and their hosts	 133
Peter D. Nagy	
1. Introduction	134
2. The heat shock protein 70 chaperone network	136
3. The pro-viral roles of co-opted protein chaperones in TBSV replication	137
4. The antiviral roles of co-opted protein co-chaperones in TBSV replication	139
5. Cellular RNA helicases and RNA chaperones	141
6. The pro-viral roles of co-opted DEAD-box helicases and RNA chaperones in TBSV replication	142
7. Comparison of protein chaperone and RNA helicase/chaperone functions	146
8. The ubiquitin network	147
9. The roles of the host ubiquitin network in TBSV replication and in the arms race with hosts	148
10. Summary	151
Acknowledgments	151
References	151
 5. Update on immunopathology of bornavirus infections in humans and animals	 159
Daniel Nobach, Jana Müller, Dennis Tappe, and Christiane Herden	
1. Introduction and history	160
2. Classification, genome organization, viral life cycle and virus-host interactions	162
3. Mammalian orthobornaviruses	170
4. Avian orthobornaviruses	194
5. Novel bornaviruses	200
6. Conclusions	201
Acknowledgments	202
References	202

6. Immunopathology of Zika virus infection	223
Derek J. Platt and Jonathan J. Miner	
1. Zika virus: Discovery, outbreaks, and clinical manifestations of disease	223
2. Zika virus structure and life cycle	227
3. Zika virus immune antagonism	230
4. Animal models of Zika virus infection	232
5. African vs Asian Zika virus strains and pathogenesis	235
6. Development of neutralizing antibodies, diagnostic tests, and vaccines	235
7. Summary	239
References	240
7. One hundred years of (influenza) immunopathology	247
David F. Boyd, Taylor L. Wilson, and Paul G. Thomas	
1. Vaccination, treatment, and health burden of influenza	248
2. The spectrum of influenza disease	249
3. Course of influenza virus infection in humans and mice	251
4. Course of disease in severe infections	254
5. Lung pathology in influenza	256
6. Role of the virus in tissue damage/pathology	257
7. Role of the host response in tissue damage	261
8. Future questions and potential therapeutic targets to reduce immunopathology	272
Acknowledgments	275
References	276
8. Immunopathology and immune homeostasis during viral infection in insects	285
Andrea González-González and Marta L. Wayne	
1. Introduction	286
2. Antiviral immune pathways in insects	287
3. Immunopathology in insects	291
4. Restoring immune homeostasis	293
5. Concluding remarks and future directions	301
References	306
9. Immunopathogenesis of alphaviruses	315
Victoria K. Baxter and Mark T. Heise	
1. Introduction to alphaviruses	316
2. Potential outcomes following alphavirus infection	320
3. Protective effects of the immune system during Alphavirus infection	320

4. Natural infection with alphaviruses	321
5. Alphavirus-induced arthralgia and myalgia	341
6. Alphavirus-induced encephalomyelitis	343
7. Conclusion and future directions	354
Acknowledgments	356
References	356
10. Reverse genetic systems: Rational design of coronavirus live attenuated vaccines with immune sequelae	383
Zhiqian Ma, Zhiwei Li, Linfang Dong, Ting Yang, and Shuqi Xiao	
1. Introduction	384
2. Coronavirus reverse genetics systems	386
3. Rational design of vaccine candidates using reverse genetics technology	393
4. Study the cell and tissue tropism of coronaviruses using reverse genetics	404
5. Screening antiviral drugs using reverse genetics	405
6. Conclusion and future directions	405
Acknowledgments	406
References	406
