

Contents

Chapter 1 An Introduction to Life on Earth 1

The Characteristics of Living Things 1

- Living Things Are Both Complex and Organized 2
- Living Things Must Acquire and Use Materials and Energy 4
- Homeostasis Maintains Relatively Constant Internal Conditions 5
- Growth Is a Property of All Living Organisms 5
- Living Things Respond to Stimuli 5
- Living Things Reproduce Themselves 5
- Living Things Have the Capacity to Evolve 6

The Diversity of Life 6

- Members of the Kingdom Monera Are Prokaryotic Cells; Members of All Other Kingdoms Are Composed of Eukaryotic Cells 8
- Members of the Kingdoms Monera and Protista Are Mostly Unicellular; Members of the Kingdoms Fungi, Plantae, and Animalia Are Primarily Multicellular 8
- Members of the Different Kingdoms Have Different Ways of Acquiring Energy 8

Biology: The Science of Life 8

- Scientific Principles Underlie All Scientific Inquiry 8
- The Scientific Method Is the Basis for Scientific Inquiry 9
- SCIENTIFIC INQUIRY: DOES LIFE ARISE SPONTANEOUSLY? 10
- Science Is a Human Endeavor 11
- Scientific Theories Have Been Thoroughly Tested 11

Evolution: The Unifying Concept of Biology 12

- Three Natural Processes Underlie Evolution 12

Knowledge of Biology Illuminates Everyday Life 14

- EARTH WATCH: BIODIVERSITY IS THREATENED BY HUMAN ACTIVITIES 14
- Review Section 16

UNIT 1 THE LIFE OF A CELL 19

Chapter 2 Atoms, Molecules, and Life 20

Matter and Energy 22

- Energy Exists in Several Forms That Can Be Interconverted 22

The Structure of Matter 22

- Atoms, the Smallest Units of Elements, Are Composed of Still Smaller Particles 22
- Atoms Will React with Other Atoms Only When There Are Vacancies in Their Outermost Electron Shells 24

Chemical Bonds: Joining Atoms to Make Molecules 25

- Atoms Can Become Stable by Gaining or Losing Electrons, Forming Charged Ions; The Attraction between Oppositely Charged Ions Produces Ionic Bonds 25

- Atoms Can Become Stable by Sharing Electrons with Other Atoms, Forming Covalent Bonds 26

- Hydrogen Bonds Are Weak Electrical Attractions between the Polar Parts of Molecules 26

Organic and Inorganic Molecules 27

Water and Life 28

- Water Interacts with Many Other Molecules 28
- The pH of a Solution Is a Measure of Its Concentration of Hydrogen Ions 30
- A Buffer Helps Maintain a Solution at a Relatively Constant pH 30
- Water Moderates the Effects of Temperature Changes 30
- Water Forms an Unusual Solid, Ice 31
- SCIENTIFIC INQUIRY: THE USE OF ISOTOPES IN BIOLOGY AND MEDICINE 32
- Water Molecules Tend to Stick Together 33
- Review Section 34

Chapter 3 Biological Molecules 36

Synthesizing Organic Molecules: A Modular Approach 38

- Biological Molecules Are Joined Together or Broken Apart by Adding or Removing Water 38

The Principal Types of Biological Molecules 38

- Carbohydrates Are Sugars and Starches 40
- Lipids Are Diverse Molecules That Are Insoluble in Water 42
- Proteins Play Many Roles in Living Organisms 44
- A CLOSER LOOK: PROTEIN STRUCTURE—A HAIRY SUBJECT 48
- Nucleic Acids Form DNA and RNA, the Molecules of Heredity 52
- Review Section 53

Chapter 4 Energy Flow in the Life of a Cell 56

Energy and the Ability to Do Work 57

- The Laws of Thermodynamics Describe the Basic Properties of Energy 58
- Living Things Use the Energy of Sunlight to Create the Low-Entropy Conditions Characteristic of Life 59

Energy Flow in Chemical Reactions 59

- Exergonic Reactions Release Energy 60
- Endergonic Reactions Require an Input of Energy 60
- Coupled Reactions Link Exergonic with Endergonic Reactions 61
- Chemical Reactions Are Reversible 61

Controlling the Metabolism of Living Cells 63

- At Body Temperatures, High Activation Energy Makes Spontaneous Reactions Proceed Too Slowly to Sustain Life 64

- Catalysts Reduce Activation Energy 64

- Enzymes Are Biological Catalysts 65

Coupled Reactions and Energy-Carrier Molecules 68

- ATP Is the Principal Energy Carrier in a Cell 68
- Electron Carriers Also Transport Energy Within Cells 70
- Review Section 71

Chapter 5 Cell Structure and Function 74

The Development of Cell Theory 75

An Overview of Cell Structure and Function 76

The Plasma Membrane Isolates the Cell But Allows Interactions with the Environment 76

The Genetic Material Provides a Cellular "Blueprint" 76

SCIENTIFIC INQUIRY: VIEWING THE CELL—A GALLERY OF MICROSCOPIC IMAGES 78

Cytoplasm Fills Each Cell and Surrounds the Nucleus 80

Cell Function Limits Cell Size 80

Types of Cells: Prokaryotic and Eukaryotic 81

Prokaryotic Cells Are Relatively Simple 81

Eukaryotic Cells Are More Complex 82

The Nucleus: Control Center of the Cell 82

The Nuclear Envelope Allows Selective Exchange of Materials 82

Chromatin Consists of DNA and Its Associated Proteins 82

The Nucleolus Is the Site of Ribosome Assembly 85

The Membrane System of the Cell 87

Membranes Consist of a Double Layer of Phospholipids in Which Proteins Are Embedded 87

The Cell's Membrane System Includes the Plasma Membrane, Endoplasmic Reticulum, the Golgi Complex, and Lysosomes 87

Chloroplasts and Mitochondria: Energy Capture and Extraction 91

A CLOSER LOOK: THE "ESSENTIALLY FOREIGN CREATURES" WITHIN US—THE EVOLUTION OF CHLOROPLAST AND MITOCHONDRIA 92

Chloroplasts Are the Site of Photosynthesis 94

Mitochondria Produce ATP Using Energy Stored in Food Molecules 94

Plastids and Vacuoles: Storage and Elimination 95

Many Types of Plastids Store Food in Plants 95

Vacuoles Serve Many Functions, Including Support and Storage and Elimination of Food and Wastes 95

The Cytoskeleton: Shape, Support, and Movement 95

Microfilaments Allow Cells to Change Shape and Guide the Movement of Organelles 96

Intermediate Filaments Provide a Supportive Framework 98

Microtubules Help Position, Anchor, and Move Organelles, and Alter the Shapes of Cells 98

Cilia and Flagella Move the Cell or Move Fluid Past the Cell 100

Review Section 101

Chapter 6 Cell Membrane Structure and Function 104

Cell Walls 106

The Plasma Membrane 106

The Fluid Mosaic Model Describes the Structure of the Plasma Membrane 106

The Fluid Portion of Membranes Is Produced by a Double Layer of Phospholipids: The Phospholipid Bilayer 107

A Variety of Proteins in the Cell Membrane Form a Protein Mosaic 109

Transport across Membranes 109

Molecules in Fluids Move in Response to Gradients 110

Movement across Membranes Occurs by Both Passive and Energy-Requiring Transport 110

Passive Transport: Movement down Concentration Gradients 110

Molecules Diffuse from Areas of High Concentration to Areas of Low Concentration 110

Molecules Diffuse across Membranes Down Their Concentration Gradients 111

Osmosis Is the Diffusion of Water Across Membranes 113

Osmosis across the Cell Membrane Plays an Important Role in the Lives of Cells 114

Energy-Requiring Transport across Membranes 115

Active Transport Uses Energy to Move Molecules Across Membranes 115

Cells Engulf Particles or Fluids by Endocytosis 115

Transport across Intracellular Membranes 116

Vacuoles Help Regulate Cell Volume 118

Cell Connections and Communication 120

Desmosomes Attach Cells Together 120

Tight Junctions Leakproof the Cell 120

Gap Junctions and Plasmodesmata Allow Communication Between Cells 120

EVOLUTIONARY CONNECTIONS: NATURAL SELECTION HAS PRODUCED CELL MEMBRANES WITH DIVERSE COMPOSITION 122

Review Section 123

Chapter 7 Capturing Solar Energy: Photosynthesis 126

Photosynthesis: An Overview 128

Leaves and Chloroplasts Are Adaptations for Photosynthesis 128

The Light-Dependent Reactions: Converting Light to Chemical Energy 130

During Photosynthesis, Light Is First Captured by Pigments in Chloroplasts 130

The Light-Dependent Reactions Occur in Clusters of Molecules Called Photosystems 130

The Light-Independent Reactions: Securing Chemical Energy in Glucose Molecules 132

The C_3 Cycle Captures Carbon Dioxide 132

A CLOSER LOOK: CHEMIOSMOSIS—THE MECHANISM OF ATP SYNTHESIS IN CHLOROPLASTS 133

Carbon Fixed during the C_3 Cycle Is Used to Synthesize Glucose 134

The Relationship between the Light-Dependent and Light-Independent Reactions 134

Water, CO_2 , and the C_4 Pathway 134

When Stomata Are Closed to Conserve Water, Wasteful Photorespiration Occurs 135

C_4 Plants Reduce Photorespiration Using a Two-Stage Carbon Fixation Process 135

C_3 and C_4 Plants Are Adapted to Specific Environmental Conditions 136

Review Section 137

Chapter 8 Harvesting Energy from Food: Glycolysis and Cellular Respiration 140

Glucose Metabolism: An Overview 141

Glycolysis 143

Glucose Must Be Activated by ATP Before Its Energy Can Be Harvested 143

A CLOSER LOOK: GLYCOLYSIS 144

Fermentation 145

Some Cells Ferment Pyruvic Acid to Lactic Acid 145

Other Cells Ferment Pyruvic Acid to Alcohol 146

Cellular Respiration 146

Pyruvic Acid Is Transported into the Mitochondrial Matrix 146

Pyruvic Acid Is Broken Down by Reactions in the Mitochondrial Matrix 148

Energetic Electrons Are Carried to Electron Transport Systems in the Inner Mitochondrial Membrane 148

A CLOSER LOOK: THE MITOCHONDRIAL MATRIX REACTIONS 149

Chemiosmosis Captures Energy Stored in a Hydrogen Ion Gradient and Produces ATP 150

ATP Is Transported from the Mitochondrial Matrix and Diffuses into the Cell Cytosol 150

Cellular Metabolism Influences the Way Entire Organisms Function 150

A CLOSER LOOK: CHEMIOSMOSIS IN MITOCHONDRIA 151

HEALTH WATCH: METABOLIC TRANSFORMATION—WHY YOU CAN GET FAT BY EATING SUGAR 152

Review Section 153

UNIT II INHERITANCE 157

Chapter 9 Cellular Reproduction 158

The Essentials of Cellular Reproduction 160

Cell Division Transmits a Complete Set of Hereditary Information to Each Daughter Cell 160

Cell Division Transmits Essential Cytoplasmic Materials to Each Daughter Cell 160

The Activities of a Cell from One Cell Division to the Next Constitute the Cell Cycle 160

Prokaryotic and Eukaryotic Chromosomes Compared 161

The Prokaryotic Cell Cycle 161

The Eukaryotic Chromosome 161

The Eukaryotic Chromosome Consists of a Single Strand of DNA Complexed with Proteins 161

Eukaryotic Chromosomes Often Occur in Pairs Containing Similar Genetic Information 162

The Eukaryotic Cell Cycle 163

Growth, Replication of Chromosomes, and Most Cell Functions Occur during Interphase 164

Cells Vary in the Duration of Interphase 164

Cell Division Consists of Nuclear Division and Cytoplasmic Division 164

Mitosis 166

During Prophase, the Chromosomes Condense and the Spindle Apparatus Forms and Attaches to the Chromosomes 166

During Metaphase, the Chromosomes Are Aligned along the Equator of the Cell 168

During Anaphase, Sister Chromatids Separate and Are Pulled to Opposite Poles of the Cell 168

During Telophase, Nuclear Envelopes Re-Form Around Each Group of Chromosomes 169

Cytokinesis 169

Cell Division and Asexual Reproduction 170

Review Section 172

Chapter 10 DNA: The Molecule of Heredity 176

The Composition of Chromosomes 177

DNA Is Composed of Four Types of Nucleotides 178

Is the Genetic Material DNA or Protein? 179

DNA: The Hereditary Molecule 179

Bacterial Transformation Indicates That the Hereditary Molecule of Bacteria Is DNA 179

The Hereditary Molecule of Bacteriophages Is Also DNA 181

The Sequence of Bases in DNA Can Encode Vast Amounts of Information 182

The Structure of DNA 182

The DNA of Chromosomes Is a Double Helix 184

DNA Replication: The Key to Constancy 185

The Steps of DNA Replication Are Catalyzed by the Coordinated Action of Several Enzymes 186

Base Pairing and Proofreading Produce Almost Error-Free Replication of DNA 188

SCIENTIFIC INQUIRY: THE DISCOVERY OF THE DOUBLE HELIX 189

Review Section 190

Chapter 11 Gene Expression and Regulation 192

The Relationship between Genes and Proteins 193

Most Genes Encode the Information for the Synthesis of a Protein 194

The Sequence of Bases in DNA Codes for the Sequence of Amino Acids in Proteins 195

Synthesizing Proteins from the Instructions in DNA 195

Genetic Information Flows in a Cell from DNA to RNA to Protein 196

The Genetic Code 196

The Genetic Code Uses Three Bases to Specify Each Amino Acid 196

RNA: Intermediary in Protein Synthesis 197

SCIENTIFIC INQUIRY: CRACKING THE GENETIC CODE 198

Transcription Produces RNA Molecules That Are Complementary Copies of One Strand of DNA 199

Three Types of RNA Cooperate in Protein Synthesis 199

Protein Synthesis 201

Mutations in DNA and Their Effects 204

Point Mutations Are Changes in a Single Base 205

Insertion and Deletion Mutations Result from Addition or Removal of Nucleotides 205

- Mutations Differ in Their Effects on Protein Structure and Function 205
- Mutations Provide the Raw Material for Evolution 207

Gene Regulation 207

Gene Regulation in Prokaryotes 208

Gene Regulation in Eukaryotes 209

- Eukaryotic Genes Consist of DNA Segments That Code for the Amino Acid Sequence of Proteins Interrupted by Noncoding DNA Segments 209

- A CLOSER LOOK: RUBE GOLDBERG GENETICS—MAKING NEW PROTEINS FROM OLD PARTS 212
- Review Section 214

Chapter 12 Gene Exchange, Meiosis, and Eukaryotic Life Cycles 218

Genetic Variability, Genetic Exchange, and the Evolution of Sexual Reproduction 220

- Mutations in DNA Are the Ultimate Source of Genetic Variability 220
- The Effects of a Mutation Depend on the Nature of the Mutation, the Organism in Which It Occurs, and the Environment in Which the Organism Lives 220
- Genetic Exchange May Combine Useful Mutations 220
- Eukaryotic Organisms Use a Specialized Cell Division Process Called Meiosis to Combine Genetic Material from Two Separate Parents in a Single Offspring 220
- "Permanent" Diploidy Protects against Some of the Harmful Effects of Mutations 221

Meiosis and Sexual Reproduction 222

- Meiosis Separates Homologous Chromosomes in a Diploid Cell to Produce Haploid Daughter Cells Containing One Copy of Each Type of Chromosome 222

The Mechanisms of Meiosis 222

- Meiosis I 222
- Meiosis II 227

Mitosis, Meiosis, and Eukaryotic Life Cycles 227

- In Haploid Life Cycles, the Majority of the Cycle Consists of Haploid Cells 228
- In Diploid Life Cycles, the Majority of the Cycle Consists of Diploid Cells 228
- In Alternation-of-Generations Life Cycles, There Are Both Diploid and Haploid Multicellular Stages 228

The Roles of Meiosis and Sexual Reproduction in Producing Genetic Variability 229

- Review Section 230

Chapter 13 Patterns of Inheritance 234

Gregor Mendel and the Origin of Genetics 236

- Doing It Right: The Secrets of Mendel's Success 237

Inheritance of Single Traits: The Law of Segregation 238

- The Inheritance of Dominant and Recessive Alleles on Homologous Chromosomes Can Explain the Results of Mendel's Monohybrid Crosses 239
- Mendel's Hypothesis Can Be Used to Predict the Outcome of New Types of Single-Trait Crosses 240

Inheritance of Multiple Traits: Independent Assortment 241

Inheritance Patterns of Genes Located on the Same Chromosome 242

- Genes on the Same Chromosome Tend to Be Inherited Together 243
- Crossing Over May Separate Linked Genes 243
- The Frequency of Crossing Over Between Linked Genes Can Be Used to Map the Location of Genes on a Chromosome 246

The Inheritance of Sex and Sex-Linked Genes 246

- Sex Linkage Is a Special Case of Linkage between Genes on the Same Chromosome 247

Variations on the Mendelian Theme 249

- In Incomplete Dominance, the Phenotype of Heterozygotes Is Intermediate Between the Phenotypes of the Homozygotes 249
- There May Be Multiple Alleles of a Single Gene 249
- Many Traits Are Influenced by Several Genes 251
- A Single Gene May Have Multiple Effects on Phenotype 251
- The Environment Influences the Expression of All Genes 251

The Molecular Basis of Mendelian Genetics 253

- Reflections on Genetic Diversity and Human Welfare 254
- Review Section 255

Chapter 14 Molecular Genetics and Biotechnology 260

DNA Recombination in Nature 262

- DNA Recombination Occurs Naturally Through Processes Such As Sexual Reproduction, Bacterial Transformation, and Viral Infection 262
- Recombination Provides Raw Material for Evolution 262
- There Are Both Similarities and Differences between Recombination in Nature and in the Laboratory 263

Recombinant DNA Technology 263

- A DNA Library Consists of DNA from a Particular Organism Inserted into Bacterial Plasmids 263
- The Genes of Interest Must Be Identified in the DNA Library 265
- Selected DNA Sequences in the Library Can Be Amplified 265
- Amplified Genes Can Be Used for Research, Industrial, Medical, or Agricultural Purposes 266
- A CLOSER LOOK: THE POLYMERASE CHAIN REACTION—HOT SPRINGS AND HOT SCIENCE 268

Locating Genes 271

- Restriction Enzymes Can Be Used to Provide Markers on a Chromosome 271
- Restriction Fragment Length Polymorphisms Can Be Used to Locate a Gene 271

Sequencing Genes 272

Reflections on the Ethics of Biotechnology 273

- Some Uses of Biotechnology Have Social Impacts 273
- SCIENTIFIC INQUIRY: DNA FINGERPRINTING IN FORENSICS—THE CASE OF THE TELLTALE PALO VERDE 274

- Bioengineered Organisms May Be Released into the Environment 274

- Biotechnology May Eventually Allow Alterations in Human Genomes 275

EARTH WATCH: BIOTECHNOLOGY ATTACKS THE
CHESTNUT BLIGHT 276
Review Section 277

Chapter 15 Human Genetics 280

Methods in Human Genetics 281

Single-Gene Inheritance 283

- Most Human Genetic Disorders Are Determined by Recessive Alleles 283
- A Few Human Genetic Disorders Are Determined by Dominant Alleles 286
- Many Human Traits Are Either Sex-Linked or Sex-Influenced 287

SCIENTIFIC INQUIRY: IN SEARCH OF THE HUNTINGTON'S GENE 288

Complex Inheritance 290

- Many Human Traits Are Influenced by Many Genes 290
- The Environment Influences the Expression of Genes 290

Chromosomal Inheritance 290

- Some Genetic Disorders Are Caused by Abnormal Numbers of Sex Chromosomes 291
- In Humans, the Y Chromosome Determines Maleness 292
- Some Genetic Disorders Are Caused by Abnormal Numbers of Autosomes 292

The Human Genome Project 294

Medical Genetics Poses New Medical and Ethical

- Dilemmas 295
- Phenylketonuria Illustrates a Biomedical Dilemma 295
- Knowledge of Human Genetics Poses Ethical Dilemmas 295
- SCIENTIFIC INQUIRY: COLLECTING FETAL SAMPLES AND ANALYZING THEM USING BIOTECHNOLOGY 296
- Review Section 297

UNIT III EVOLUTION 301

Chapter 16 Principles of Evolution 302

The History of Evolutionary Thought 304

- What Is a Species? 304
- The Philosophies of Plato and Aristotle Influenced Early Christian Beliefs 304
- Evidence Supporting Evolution Was Discovered Even before Darwin's Time 304
- Charles Darwin's Voyage on the *Beagle* Sowed the Seeds for His Theory of Evolution 307
- Darwin and Wallace Both Proposed That Evolution Occurs by Natural Selection 309
- Evolutionary Theory Arises from Scientific Observations and Conclusions Based on Them 311

The Evidence for Evolution 312

- The Fossil Record Provides Evidence of Evolutionary Change over Time 312
- Comparative Anatomy Provides Structural Evidence for Evolution 312
- Embryological Stages of Animals Can Provide Evidence for Common Ancestry 314
- Modern Biochemical and Genetic Analyses Reveal Relatedness among Diverse Organisms 314
- Artificial Selection Demonstrates That Organisms May Be Modified by Controlled Breeding 315
- Evolution by Natural Selection Occurs Today 316
- SCIENTIFIC INQUIRY: MODERN MOLECULAR GENETIC TECHNIQUES SHED LIGHT ON EVOLUTIONARY RELATIONSHIPS 318

A Postscript by Charles Darwin 318

Review Section 319

Chapter 17 How Organisms Evolve 322

Evolution and the Genetics of Populations 323

Genes, Influenced by the Environment, Determine the Traits of Each Individual 323

The Gene Pool Is the Sum of All the Genes Occurring in a Population 324

Evolution Is the Change of Gene Frequencies within a Population 324

Mutation and the Recombination of Alleles During Sexual Reproduction Provide Sources of Variability 324

The Equilibrium Population Is a Hypothetical Population in Which Evolution Does Not Occur 326

The Mechanisms of Evolution 326

Mutations Are the Ultimate Source of Genetic Variability 326

Migration Produces Gene Flow Between Populations 326

Small Populations Are Subject to Random Changes in Allele Frequencies 327

A CLOSER LOOK: THE HARDY-WEINBERG EQUILIBRIUM POPULATION 328

Mating within a Population Is Almost Never Random 331

All Genotypes Are Not Equally Adaptive 331

Natural Selection 332

Natural Selection Acts on the Phenotype, Which Reflects the Underlying Genotype 332

Natural Selection Can Influence Populations in Three Major Ways 333

Natural Selection Takes Several Forms 335

Extinction 338

Localized Distribution and Extreme Specialization Make Species Vulnerable in Changing Environments 338

Interactions with Other Organisms May Drive Species to Extinction 339

Habitat Change and Destruction Are the Leading Causes of Extinction 339

EARTH WATCH: NATURAL SELECTION, GENETIC DIVERSITY, AND ENDANGERED SPECIES 341

EVOLUTIONARY CONNECTIONS: KIN SELECTION AND THE EVOLUTION OF ALTRUISM 342

Review Section 343

Chapter 18 The Origin of Species 346

Speciation 348

Allopatric Speciation Occurs in Populations That Are Physically Separated 348

Sympatric Speciation Occurs in Populations That Live in the Same Area 350

Maintaining Reproductive Isolation between Species 351

Premating Isolating Mechanisms Prevent Mating between Species 352

Postmating Isolating Mechanisms Prevent Production of Vigorous, Fertile Offspring 353

Phyletic and Divergent Speciation 353

The Genetics of Speciation 353

One Model of Speciation Stresses Gradual Accumulation of Many Small Changes 354

A Second Model Stresses the Sudden Appearance of a Few Major Changes 354

Which Model Is Correct? 354

Rates of Speciation 355

During Adaptive Radiation One Species Gives Rise to Many under the Differing Selection Pressures of New Habitats 355

The Pattern of Evolution 355

Gradualism Explains Speciation As the Slow, Steady Accumulation of Small Changes over Time 355

Punctuated Equilibrium Explains Speciation As Occurring Relatively Rapidly amid Long Periods of Little Change 355

Gradualism and Punctuated Equilibrium Models Can Both Be Applied to the Evolution of the Horse 356

Many Evolutionary Biologists Accept a Synthesis of Gradualism and Punctuated Equilibrium 357

Review Section 359

Chapter 19 The History of Life On Earth 362

Origins 364

Prebiotic Evolution Was Controlled by the Early Atmosphere and Climate 365

SCIENTIFIC INQUIRY: RADIOMETRIC DATING TRACES FOSSILS THROUGH TIME 368

The First Life 368

Eukaryotes Evolved Membrane-Enclosed Organelles and A Nucleus 369

Multicellularity 371

Multicellular Life in the Sea 371

Multicellular Plants Evolved Specialized Structures That Facilitated Their Invasion of Diverse Habitats 371

Multicellular Animals Evolved Specializations That Allowed Them to Capture Prey, Feed, and Escape More Efficiently 371

The Invasion of the Land 372

Some Plants Evolved Specialized Structures That Adapted Them to Life on Dry Land 372

Some Animals Evolved Specialized Structures That Adapted Them to Life on Dry Land 373

Human Evolution 376

Primate Evolution Has Been Linked to Grasping Hands, Binocular Vision, and a Large Brain 376

Hominids Evolved from Dryopithecine Primates 377

Australopithecines, the First True Hominids, Could Stand and Walk Upright 379

The Evolution of Human Behavior Is Highly Speculative 381

EVOLUTIONARY CONNECTIONS: WHY DO HUMANS WALK UPRIGHT? 382

Review Section 383

Chapter 20 Taxonomy: Imposing Order On Diversity 386

Taxonomic Categories 387

The Origins of Taxonomy 387

Modern Criteria for Classification 388

The Five Kingdoms of Life 389

Taxonomy: An Inexact Science 393

Exploring Biodiversity: How Many Species Exist? 393

EVOLUTIONARY CONNECTIONS: CLASSIFICATION CONUNDRUMS; OR, WHERE SHALL WE PUT THE ALGAE? 393

Review Section 395

Chapter 21 The Hidden World of Microbes 398

Viruses 399

A Virus Consists of a Molecule of DNA or RNA Surrounded by a Protein Coat 399

Viral Infections Cause Diseases That Are Difficult to Treat 400

Some Infectious Agents Are Even Simpler Than Viruses 400

How Did These Infectious Particles Originate? 402

The Kingdom Monera 402

Bacteria Are Difficult to Classify 402

Bacteria Possess a Remarkable Variety of Shapes and Structures 402

A CLOSER LOOK: VIRAL REPLICATION 404

Bacterial Reproduction Is by Cell Division Called Binary Fission 406

Bacteria Are Specialized for Specific Habitats 406

Bacteria Perform Many Functions That Are Important to Other Forms of Life 407

Some Bacteria Pose a Threat to Human Health 408

HEALTH WATCH: "UNNATURAL SELECTION"—THE EVOLUTION OF DRUG-RESISTANT PATHOGENS 409

Cyanobacteria Are Photosynthetic and Many Can Also Capture Atmospheric Nitrogen 410

Archaeobacteria Are Sufficiently Different in Cellular Structure That Some Taxonomists Place Them in a Separate Kingdom 410

The Kingdom Protista 411

Protists Are a Diverse Group Including Plantlike, Funguslike, and Animal-like Forms 412

The Unicellular Algae, or Phytoplankton, Are Plantlike Protists 412

The Slime Molds Are Funguslike Protists 414

The Protozoa Are Animal-like Protists 416

EVOLUTIONARY CONNECTIONS: OUR UNICELLULAR ANCESTORS 420

Review Section 420

Chapter 22 The Fungi 424

Fungal Form and Function 425

Most Fungi Have Filamentous Bodies 425

Fungi Obtain Their Nutrients from Other Organisms 426

Most Fungi Can Reproduce Both Sexually and Asexually 426

Economic, Ecological, and Health Impacts of Fungi 427

Some Fungi Form Symbiotic Relationships with Certain Algae and Plants 427

The Classification of Fungi 428

EARTH WATCH: THE CASE OF THE DISAPPEARING MUSHROOMS 429

The Zygote Fungi (Division Zygomycota) Can Reproduce by Forming Diploid Zygospores 429

The Sac Fungi (Division Ascomycota) Form Spores in a Saclike Case Called an Ascus 429

The Club Fungi (Division Basidiomycota) Produce Club-Shaped Reproductive Structures Called Basidia 431

The Imperfect Fungi (Division Deuteromycota) Seem to Reproduce Entirely by Asexual Means 433

The Egg Fungi (Division Oomycota) Are Quite Different from Other Fungi 434

EVOLUTIONARY CONNECTIONS: FUNGAL INGENUITY 435

Review Section 436

Chapter 23 The Plant Kingdom 438

Evolutionary Trends in Plants 439

The Plant Body Increased in Complexity As Plants Made the Evolutionary Transition from Water to Dry Land 439

The Invasion of Land Required Protection and a Means of Dispersal for Sex Cells and Developing Plants 440

Plants Have Both a Sporophyte and a Gametophyte Generation 440

Watery Origins—the Algae 440

The Red Algae (Division Rhodophyta) Are Found Primarily in Clear Tropical Oceans 440

The Brown Algae (Division Phaeophyta) Dominate in Cool Coastal Waters 443

The Green Algae (Division Chlorophyta), Found Mostly in Ponds and Lakes, Probably Gave Rise to the Land Plants 443

Land—The New Frontier 443

The Liverworts and Mosses (Division Bryophyta) Are Only Partially Adapted to Dry Land 444

The Vascular Plants, or Tracheophytes, Have Conducting Vessels That Also Provide Support 445

The Seedless Vascular Plants Include the Club Mosses, Horsetails, and Ferns 445

The Seed Plants Dominate the Land, Aided by Two Important Adaptations: Pollen and Seeds 447

Review Section 454

Chapter 24 The Animal Kingdom 458

The Features of Animals 458

Evolutionary Trends in Animal Body Plans 458

Over Evolutionary Time, Animals Have Increased in Complexity 458

Animal Phyla Show Trends toward Increasing Cellular Organization 461

Animal Phyla Show General Trends in Body Symmetry 461

Cephalization Increased over Evolutionary Time 462

A Coelom Evolved in More Complex Animals 462

Segmentation is First Seen in Annelid Worms 463

Digestive Systems Increased in Complexity 464

The Major Animal Phyla 464

The Sponges: Phylum Porifera 464

The Hydra, Anemones, and Jellyfish: Phylum Cnidaria 466

The Flatworms: Phylum Platyhelminthes 468

The Roundworms: Phylum Nematoda 470

The Segmented Worms: Phylum Annelida 471

The Insects, Arachnids, and Crustaceans: Phylum Arthropoda 473

Insects Are the Most Diverse and Abundant Arthropods 474

Spiders, Scorpions and Their Relatives Are Members of the Class Arachnida 476

Crabs, Shrimp, Crayfish, and Their Relatives Are Members of the Class Crustacea 476

The Snails, Clams, and Squid: Phylum Mollusca 477

Snails and Their Relatives Are Members of the Class Gastropoda 477

Scallops, Clams, Oysters, and Their Relatives Are Members of the Class Bivalvia 477

Octopuses, Squid, and Their Relatives Are Members of the Class Cephalopoda 479

The Sea Stars, Sea Urchins, and Sea Cucumbers: Phylum Echinodermata 479

The Tunicates, Lancelets, and Vertebrates: Phylum Chordata 481

The Invertebrate Chordates Include Lancelets and Tunicates 481

The Vertebrates Have a Backbone and Other Adaptations That Have Contributed to Their Success 482

Success on Dry Land Required Numerous Adaptations 484

EARTH WATCH: AMPHIBIANS IN DECLINE 486

EVOLUTIONARY CONNECTIONS: ARE HUMANS A BIOLOGICAL SUCCESS? 490

Review Section 491

UNIT IV PLANT ANATOMY AND PHYSIOLOGY 495

Chapter 25 The Structure of Land Plants 496

An Overview of Plant Structure 498

Plant Development and Growth 498

Plant Tissues and Cell Types 500

The Dermal Tissue System Forms the Covering for the Plant Body 500

The Ground Tissue System Makes Up Most of the Young Plant Body 501

The Vascular Tissue System Consists of Xylem and Phloem 502

Roots: Anchorage, Absorption, and Storage 504

Primary Growth Causes Roots to Elongate 504

The Epidermis of the Root Is Very Permeable to Water 504

Cortex Makes Up Much of the Interior of a Young Root 504

The Vascular Cylinder Contains Conducting Tissues 506

Stems: Reaching for the Light 506

The Stem Has a Complex Organization Including Four Types of Tissue 506
 Stem Branches Form from Lateral Buds Consisting of Meristem Cells 509
 Secondary Growth Produces Thicker, Stronger Stems 509

Leaves: Nature's Solar Collectors 511

Leaves Have Two Major Parts: Blades and Petioles 511

Special Adaptations of Roots, Stems, and Leaves 512

Some Specialized Roots Store Food, Others Photosynthesize 512

Some Specialized Stems Produce New Plants, Store Water or Food, or Produce Thorns or Climbing Tendrils 512

Specialized Leaves May Conserve and Store Water, Store Food, or Even Capture Insects 513

Review Section 515

Chapter 26 How Land Plants Acquire and Transport Nutrients 518

A Comparison of Plant and Animal Nutrition 519

Plant Nutrition 520

Roots Acquire Minerals Using a Four-Step Process 520

Symbiotic Relationships Help Plants Acquire Nutrients 522

The Acquisition of Water 523

The Transport of Water and Minerals 524

Water Movement in Xylem Is Explained by the Cohesion-Tension Theory 524

Adjustable Stomata Control the Rate of Transpiration 525

The Transport of Sugars 528

The Pressure Flow Theory Explains Sugar Movement in Phloem 529

EARTH WATCH: PLANTS HELP REGULATE THE DISTRIBUTION OF WATER 530

Review Section 531

Chapter 27 Plant Reproduction and Development 534

Sexual versus Asexual Reproduction 535

Plant Life Cycles 536

The Evolution of Flowers 537

Complete Flowers Have Four Major Parts 538

Coevolution of Flowers and Pollinators 539

Some Flowers Provide Food for Pollinators 540

Sexy Deceptions Attract Pollinators 542

Some Plants Provide Nurseries for Pollinators 542

Gametophyte Development in Flowering Plants 543

Pollen Is the Male Gametophyte 543

The Embryo Sac Is the Female Gametophyte 544

Pollination and Fertilization 545

The Development of Seeds and Fruits 546

The Seed Develops from the Ovule and Embryo Sac 546

The Fruit Develops from the Ovary Wall 547

Seed Dormancy Helps Assure Germination at an Appropriate Time 547

A CLOSER LOOK: ADAPTATIONS FOR SEED DISPERSAL 548

EARTH WATCH: DISRUPTING COEVOLUTIONARY RELATIONSHIPS THREATENS ECOSYSTEMS 550

The Germination and Growth of Seedlings 551

The Shoot Tip Is Protected by the Coleoptile 551

Cotyledons Nourish the Sprouting Seed 552

Controlling the Development of the Seedling 552

Review Section 552

Chapter 28 Plant Responses to the Environment 556

The Discovery of Plant Hormones 557

The Work of Several Researchers Revealed the Hormonal Mechanisms of Phototropism 557

Plant Hormones and Their Actions 559

The Plant Life Cycle: Reception, Response, and Regulation 561

Absciscic Acid Maintains Seed Dormancy; Gibberellin Stimulates Germination 561

Auxin Controls the Orientation of the Sprouting Seedling 561

The Genetically Determined Shape of the Mature Plant Is the Result of Interactions between Hormones 563

Hormones Control the Differentiation of Xylem and Phloem 564

Daylength Controls Flowering 565

Hormones Coordinate the Development of Seeds and Fruit 566

Senescence and Dormancy Prepare the Plant for Winter 567

A CLOSER LOOK: RAPID-FIRE PLANT RESPONSES 568

Review Section 569

UNIT V ANIMAL ANATOMY AND PHYSIOLOGY 571

Chapter 29 Homeostasis and the Organization of the Animal Body 572

Homeostasis 573

Negative Feedback Tends to Maintain Constant Internal Conditions 573

Positive Feedback Events Are Self-Limiting 575

The Organization of the Animal Body 575

Animal Tissues Are Composed of Similar Cells That Perform a Specific Function 575

Organs Include Two or More Interacting Tissue Types 580

Organ Systems Consist of Two or More Interacting Organs 581

Review Section 582

Chapter 30 Circulation 584

Types of Circulatory Systems 585

The Vertebrate Circulatory System 586

The Vertebrate Heart Consists of Muscular Chambers Whose Contraction Is Controlled by Electrical Impulses 587

Blood Transports Dissolved Nutrients, Wastes, and Hormones throughout the Body 591

The Blood Vessels Carry Blood to All Parts of the Body 594

The Lymphatic System 597

Lymphatic Vessels Resemble the Veins and Capillaries of the Circulatory System 597

- The Lymphatic System Returns Fluids to the Blood 597
- HEALTH WATCH: CARDIOVASCULAR DISORDERS 598
- The Lymphatic System Transports Fats from the Intestine to the Blood 599
- The Lymphatic System Helps Defend the Body against Disease 600
- Review Section 601

Chapter 31 Respiration 604

- The Evolution of Respiratory Systems 605**
 - Some Types of Animals Exchange Gases without Specialized Respiratory Structures 606
 - A Variety of Respiratory Systems Have Evolved That Facilitate Gas Exchange by Diffusion 606
 - A CLOSER LOOK: GILLS AND GAS EXCHANGE—COUNTERCURRENT FLOW 608
- The Human Respiratory System 610**
 - The Conducting Portion of the Respiratory System Carries Air to the Lungs 610
 - Gas Exchange Occurs in the Alveoli 611
 - Oxygen and Carbon Dioxide Are Transported Using Different Mechanisms 611
 - Air Is Inhaled Actively and Exhaled Passively 612
 - Breathing Rate Is Controlled by the Respiratory Center of the Brain 613
 - HEALTH WATCH: SMOKING—A LIFE AND BREATH DECISION 614
 - Review Section 615

Chapter 32 Nutrition and Digestion 618

- Nutrition 619**
 - The Primary Sources of Energy Are Carbohydrates and Fats 619
 - Lipids Include Fats, Phospholipids, and Cholesterol 620
 - Carbohydrates, Including Sugars and Starches, Are a Source of Quick Energy 620
 - Proteins, Composed of Amino Acids, Perform a Wide Range of Functions within the Body 621
 - Minerals Are Elements and Small Inorganic Molecules Required by the Body 621
 - Vitamins Are Required in Small Amounts and Play Many Roles in Metabolism 621
 - Nutritional Guidelines Help People Obtain a Balanced Diet 624
- The Challenge of Digestion 625**
 - Digestive Systems Are Adapted to the Life-Style of Each Animal 625
- Human Digestion 627**
 - The Mechanical and Chemical Breakdown of Food Begins in the Mouth 627
 - The Esophagus Conducts Food to the Stomach, Where Digestion Continues 628
 - Most Digestion Occurs in the Small Intestine 630
 - Most Absorption Occurs in the Small Intestine 631
 - A CLOSER LOOK: THE FATE OF FATS 632
 - Water Is Absorbed and Feces Are Formed in the Large Intestine 633
 - Digestion Is Controlled by the Nervous System and Hormones 634
 - HEALTH WATCH: ULCERS—WHEN THE DIGESTIVE TRACT DIGESTS ITSELF 635
 - Review Section 635

Chapter 33 The Urinary System and Homeostasis 638

- The Functions of the Urinary System 639**
- Some Simple Urinary Systems 640**
 - Flame Cells Filter Fluids in Flatworms 640
 - Nephridia in Earthworms Resemble Parts of the Vertebrate Kidney 640
- The Human Urinary System 641**
 - Urine Is Formed in the Kidneys 641
 - Blood Is Filtered by the Glomerulus 642
 - The Blood Filtrate Is Converted to Urine in the Nephron 642
 - The Loop of Henle Allows Urine to Become Concentrated 643
 - The Kidneys Are Important Organs of Homeostasis 643
 - A CLOSER LOOK: THE NEPHRON AND URINE FORMATION 644
 - HEALTH WATCH: WHEN THE KIDNEYS COLLAPSE 647
 - Review Section 648

Chapter 34 Defenses Against Disease: The Immune Response 650

- Defenses Against Microbial Invasion 651**
 - The Skin and Mucous Membranes Form Barriers 651
 - Nonspecific Internal Defenses Combat Microbes 652
 - A CLOSER LOOK: CELLULAR COMMUNICATION DURING THE IMMUNE RESPONSE 654
- The Immune Response 657**
 - A Successful Immune Response Recognizes, Overcomes, and Remembers 657
- Recognition 658**
 - Antibodies and T-Cell Receptors Recognize and Bind to Foreign Molecules, Triggering the Immune Response 658
 - An Antibody Contains Both Receptor and Effector Regions 658
 - T-Cell Receptors Bind Antigen and Trigger Responses 659
 - The Immune System Can Recognize Millions of Molecules 659
 - The Immune System Distinguishes "Self" from "Non-Self" 661
- Attack 662**
 - Humoral Immunity Is Produced by Antibodies in Blood 662
 - T Cells Produce Cell-Mediated Immunity 664
- Memory 665**
- Medicine and the Immune Response 666**
 - Antibiotics Slow Down Microbial Reproduction 666
 - Vaccinations Stimulate the Development of Memory Cells 666
 - Allergies Are Inappropriately Directed Immune Responses 666
 - An Autoimmune Disease Is an Immune Response against Some of the Body's Own Molecules 667
 - An Immune Deficiency Disease Results from the Inability to Mount an Effective Immune Response to Infection 667
- AIDS 667**

The Human Immunodeficiency Virus Is a Retrovirus That Infects and Destroys Helper T Cells 668
 HIV Virus Is Transmitted by Exchange of Body Fluids 668
 There Are Partially Effective Treatments, But No Cures, for AIDS 668
 AIDS Is One of Many Widespread, Lethal Diseases 670

Cancer 670

Cancer Is Caused by Mutation, Activation, or Suppression of Genes That Control Cell Division 671
 HEALTH WATCH: FLU-THE UNBEATABLE BUG 672
 Review Section 675

Chapter 35 Chemical Control of the Animal Body: The Endocrine System 678

Animal Hormone Structure and Function 679

Hormones Have a Variety of Chemical Structures 680
 Hormones Function by Binding to Specific Receptors on Target Cells 680
 Hormones Are Regulated by Feedback Mechanisms 681

The Mammalian Endocrine System 683

Mammals Have Both Exocrine and Endocrine Glands 683
 The Hypothalamus Controls the Secretions of the Pituitary Gland 683
 The Thyroid and Parathyroid Glands Are Located in the Neck 687
 The Pancreas Is Both an Exocrine and an Endocrine Gland 689
 The Sex Organs Secrete Steroid Hormones 691
 The Adrenal Glands Have Two Parts That Secrete Different Hormones 691
 Many Types of Cells Produce Prostaglandins 692
 Other Endocrine Organs Include the Pineal Gland, Thymus, Kidneys, Heart, and Digestive Tract 692

EVOLUTIONARY CONNECTIONS: THE EVOLUTION OF HORMONES 693

Review Section 694

Chapter 36 Information Processing: The Nervous System 696

A Comparison of Nervous and Endocrine Communication 697

The Functions and Structure of Neurons 698

Dendrites Receive Signals from Other Neurons or the Environment 698
 The Cell Body Maintains the Neuron and Integrates Electrical Signals from the Dendrites 698
 The Axon Carries Electrical Signals from the Cell Body to Their Destination 699
 Synaptic Terminals Communicate with Other Neurons, Muscles, or Glands 699

Mechanisms of Neural Activity 699

How Is the Resting Potential Generated? 699
 Action Potentials Can Carry Messages Rapidly over Long Distances 701
 Neurons Communicate at Synapses 704

Building and Operating a Nervous System 705

Information Processing Requires Four Basic Operations 705
 Neural Pathways Direct Behavior 707
 Increasingly Complex Nervous Systems Are Increasingly Centralized 707

The Human Nervous System 708

The Peripheral Nervous System Links the Central Nervous System to the Body 709

The Central Nervous System Consists of the Spinal Cord and Brain 710

The Spinal Cord Is a Cable of Axons Protected by the Backbone 710

The Brain Consists of Several Parts Specialized for Specific Functions 713

The Nervous System Uses Many Neurotransmitters and Neuromodulators 716

Brain and Mind 717

The "Left Brain" and "Right Brain" Are Specialized For Different Functions 718

The Mechanisms of Learning and Memory Are Poorly Understood 719

SCIENTIFIC INQUIRY: SCANNING THE BRAIN 720

Insights on How the Brain Creates the Mind Come from Diverse Sources 720

Review Section 722

Chapter 37 The Senses: Perception 726

Receptor Mechanisms 728

Sensing Temperature: Thermoreception 729

Sensing Touch and Movement: Mechanoreception 729

Sound Perception: Hearing 730

The Structure of the Ear Helps Capture, Transmit, and Transduce Sound 730

Sound Transduction Is Aided by the Structure of the Cochlea 732

Gravity and Movement Perception: The Vestibular Apparatus 732

Sensing Light: Photoreception 733

Animal Eyes Range from Simple to Complex 733

The Mammalian Eye Collects, Focuses and Transduces Light Waves 734

Binocular Vision Allows Depth Perception 737

Smell and Taste: Chemoreception 737

The Ability to Smell Arises from Olfactory Receptors 738

Taste Receptors Are Found in Clusters on the Tongue 739

Sensing Pain 739

EVOLUTIONARY CONNECTIONS: NATURAL SELECTION SHAPES PERCEPTION 740

Review Section 742

Chapter 38 Action and Support: The Muscles and Skeleton 746

Muscle 747

The Intricate Structure of Skeletal Muscle Supports Its Active Function 748

Muscle Contraction Results from Thick and Thin Filaments Sliding Past One Another 750

- Cardiac Muscle Powers the Heart 752
- Smooth Muscle Produces Slow, Involuntary Contractions 752

The Skeleton 752

- The Vertebrate Skeleton Serves Many Functions 753
- Skeletal Tissues: Cartilage and Bone 753**
 - Cartilage Provides Flexible Support and Connections 754
 - Bone Provides a Strong, Rigid Framework for the Body 754
- A CLOSER LOOK: STICKS AND STONES-THE REPAIR OF BROKEN BONES 756

Body Movement: Muscle-Skeleton Interactions 757

- Muscles Move the Skeleton Around Flexible Joints 757
- HEALTH WATCH: OSTEOPOROSIS-THE HIDDEN CRIPPLER 758
- Review Section 759

Chapter 39 Animal Reproduction 762

Reproductive Strategies 763

- Asexual Reproduction Does Not Involve the Fusion of Sperm and Egg 764
- Sexual Reproduction Requires the Union of Sperm and Egg 765

Mammalian Reproduction 767

- The Male Reproductive Tract Includes the Testes and Accessory Structures 767
- The Female Reproductive Tract Includes Ovaries and Accessory Structures 771
- The Menstrual Cycle Is Controlled by Complex Hormonal Interactions 773
- Copulation Allows Internal Fertilization 775
- During Pregnancy, the Developing Embryo Grows within the Uterus 776
- SCIENTIFIC INQUIRY: IN VITRO FERTILIZATION 777
- Milk Secretion, or Lactation, Is Stimulated by Pregnancy 778
- Reproduction Culminates in Labor and Delivery 779

On Limiting Fertility 780

- Permanent Contraception Can Be Achieved through Sterilization 780
- There Are Three Major Approaches to Temporary Contraception 780
- Additional Contraceptive Methods Are under Development 781
- HEALTH WATCH: SEXUALLY TRANSMITTED DISEASES 784
- Review Section 785

Chapter 40 Animal Development 788

Differentiation 789

- Gene Transcription Is Precisely Regulated during Development 790

Indirect and Direct Development 791

- During Indirect Development, Animals Undergo a Radical Change in Body Form 791
- Newborn Animals That Undergo Direct Development Resemble Miniature Adults 791

Stages of Animal Development 793

- Cleavage Distributes Gene-Regulating Substances 793
- Gastrulation Forms Three Tissue Layers 795
- Adult Structures Develop During Organogenesis 796
- Sexual Maturation Is Controlled by Genes and the Environment 796
- Aging Seems to Be Genetically Programmed 797

Human Development 799

- During the First Two Months, Rapid Differentiation and Growth Occur 799

- The Placenta Secretes Hormones and Exchanges Materials between Mother and Embryo 801

- Growth and Development Continue during the Last Seven Months 802

- A CLOSER LOOK: HOMEBOX GENES AND THE CONTROL OF BODY FORM 803

- HEALTH WATCH: THE PLACENTA PROVIDES ONLY PARTIAL PROTECTION 804

- Development Culminates in Birth 806

- Review Section 806

UNIT VI ANIMAL BEHAVIOR 809

Chapter 41 The Foundations of Animal Behavior 810

The Genetic Basis of Behavior 811

Innate Behavior 812

- Kineses Are Changes in the Rate of Random Movements 812
- Taxes Are Movements toward or away from a Stimulus 812
- A Reflex Is an Instinctive Movement of Part of the Body 813
- SCIENTIFIC INQUIRY: ROBOT CRICKET FINDS HER MATE 814
- Fixed Action Patterns Are Complex Innate Behaviors 815
- Innate Behaviors Are Usually Adaptive 817

Learning 818

- Imprinting Is a Genetically Programmed Form of Learning 818
- Habituation Is a Decline in Response to a Repeated Harmless Stimulus 818
- Classical and Operant Conditioning Are More Complex Forms of Learning 818
- Trial-and-Error Learning Occurs through Experience 819
- Insight or Reasoning Is the Most Sophisticated Form of Learning 820

The Instinct to Learn and the Learning of Instincts 820

- EVOLUTIONARY CONNECTIONS: WHY DO ANIMALS PLAY? 822

- Review Section 823

Chapter 42 The Social Behavior of Animals 826

Communication 828

- Visual Communication Includes Active and Passive Signals 828
- Communication by Sound Has Many Advantages 828
- Chemical Communication Uses Pheromones 829
- Communication by Touch Helps Establish Social Bonds 830

Social Behavior 830

- Competition for Resources Underlies Many Forms of Social Behavior 830
- Sexual Reproduction Requires Social Interactions between Mates 834

Social Behavior within Animal Societies Requires Cooperative Interactions 836

Human Ethology 840

Newborn Infants Exhibit Some Innate Behaviors 840
 Innate Tendencies Can Be Revealed by Exaggerating Human Releasers 841
 Simple Behaviors Shared by Diverse Cultures May Be Innate 842
 Do People Respond to Pheromones? 842
 Comparisons of Identical and Fraternal Twins Reveal Genetic Components of Behavior 843
EVOLUTIONARY CONNECTIONS: ALTRUISM, KIN SELECTION, AND THE SELFISH GENE 843
 Review Section 844

UNIT VII ECOLOGY 847

Chapter 43 Population Growth and Regulation 848

Introduction to Ecology 849
How Populations Grow 850
 The Biotic Potential of a Population Produces Exponential Growth If Not Restrained 851
 Exponential Growth Sometimes Leads to "Boom and Bust" Cycles 853
A CLOSER LOOK: CYCLES IN PREDATOR AND PREY POPULATIONS 854
 Environmental Resistance Limits Population Growth 855
Population Patterns in Space and Time 859
 Populations Distribute Themselves in Different Ways 859
 Populations Show Characteristic Patterns of Survivorship 860
The Human Population 861
 The Human Population Is Growing Exponentially 861
 The Age Structure of a Population Predicts Its Future Growth 862
 The Population of the United States Is Growing Rapidly 863
EARTH WATCH: HAS THE HUMAN POPULATION EXCEEDED EARTH'S CARRYING CAPACITY? 864
 Review Section 867

Chapter 44 Community Interactions 870

The Ecological Niche 872
Competition between Species 872
 Interspecific Competition Helps Control Population Size 873
Predators and Their Prey 874
 Predator-Prey Interactions Shape Evolutionary Adaptations 874
 Keystone Predators Influence Community Structure 878
Symbiosis 878
 Parasitism Harms, But Does Not Immediately Kill, the Host 878
 Commensalism Benefits One Species without Affecting the Other 879
 In Mutualistic Interactions, Both Species Benefit 880
Succession: Community Changes over Time 880
SCIENTIFIC INQUIRY: DECIPHERING THE RELATIONSHIP BETWEEN ANTS AND ACACIAS 881
 There Are Two Major Forms of Succession: Primary and Secondary 883
EARTH WATCH: INTRODUCED SPECIES DISRUPT COMMUNITY INTERACTIONS 884
 Succession Also Occurs in Ponds and Lakes 885
 Succession Culminates in the Climax Community 886
 Review Section 887

Chapter 45 How Ecosystems Work 890

The Flow of Energy 891
 The Energy Captured by Photosynthetic Organisms Is Called Primary Productivity 891
 Organisms Occupy Different Trophic Levels Based on How They Acquire Energy 893
 Food Chains and Food Webs Describe the Feeding Relationships within Ecosystems 893
 Energy Flows through Trophic Levels 894
 Biological Magnification Occurs As Toxic Substances Are Passed through Trophic Levels 899
The Cycling of Nutrients 900
 The Carbon Cycle Is an Atmospheric Cycle 900
 The Nitrogen Cycle Is an Atmospheric Cycle 902
 The Phosphorus Cycle Is a Sedimentary Cycle 902
 Most Water Remains Chemically Unchanged during the Water Cycle 902
Human Intervention in Energy Flow and Nutrient Cycling 903
 Acid Rain Is Caused by Overloading the Nitrogen and Sulfur Cycles 905
 Interference with the Carbon Cycle Is Causing the Greenhouse Effect 908
Biodiversity and Ecosystem Stability 910
 Review Section 911

Chapter 46 Earth's Diverse Ecosystems 914

Climate 915
 Both Climate and Weather Are Driven by the Sun 916
 Many Physical Factors Also Influence Climate 916
The Requirements of Life 918
Life on Land 918
 Terrestrial Biomes Support Characteristic Plant Communities 918
EARTH WATCH: THE OZONE LAYER-WE HAVE PUNCTURED OUR PROTECTIVE SHIELD 920
 Rainfall, Temperature, and Vegetation 933
Life in Water 934
 Freshwater Lakes Have Distinct Regions of Life and Temperature 935
 Freshwater Lakes Are Classified According to Their Nutrient Content 936
 Marine Ecosystems Cover Much of Earth 937
EARTH WATCH: HUMANS AND ECOSYSTEMS 942
 Review Section 944
Answers to Multiple-Choice Questions 948
Glossary G-1
