Preface	v
List of headings	ix
Text acknowledgments	xv
Figure acknowledgments	xvi
 Chapter 1: History and Basic Concepts	 1–22
The origins of developmental biology.	3
A conceptual tool kit.	9
 Chapter 2: Model Systems	 23–60
Model organisms: vertebrates.	25
Model organisms: invertebrates.	43
Model systems: plants.	49
Identifying developmental genes.	52
 Chapter 3: Patterning the Vertebrate Body Plan I: Axes and Germ Layers	 61–96
Setting up the body axes.	63
The origin and specification of the germ layers.	75
 Chapter 4: Patterning the Vertebrate Body Plan II: The Mesoderm and Early Nervous System	 97–124
Somite formation and patterning.	98
The role of the organizer region and neural induction.	110
 Chapter 5: Development of the <i>Drosophila</i> Body Plan	 125–170
Maternal genes set up the body axes.	127
Polarization of the body axes during oogenesis.	136
Zygotic genes pattern the early embryo.	139
Segmentation: activation of the pair-rule genes.	146
Segment polarity genes and compartments.	150
Segmentation: selector and homeotic genes.	161
 Chapter 6: Development of Invertebrates, Ascidians, and Slime Molds	 171–202
Nematodes.	173
Molluscs.	180
Annelids.	183
Echinoderms.	186
Ascidians.	193
Cellular slime molds.	196
 Chapter 7: Plant Development	 203–230
Embryonic development.	204
Meristems.	213
Flower development.	221

Chapter 8: Morphogenesis: Change in Form in the Early Embryo	231–268
Cell adhesion.	232
Cleavage and formation of the blastula.	235
Gastrulation.	242
Neural tube formation.	254
Cell migration.	256
Directed dilation.	262
Chapter 9: Cell Differentiation	269–302
The reversibility and inheritance of patterns of gene activity.	271
Control of specific gene expression.	281
Models of cell differentiation.	287
Chapter 10: Organogenesis	303–338
The development of the chick limb.	304
Insect imaginal discs.	320
The insect compound eye.	328
The nematode vulva.	332
Development of the kidney.	334
Chapter 11: Development of the Nervous System	339–370
Specification of cell identity in the nervous system.	340
Axonal guidance.	352
Neuronal survival, synapse formation, and refinement.	360
Chapter 12: Germ Cells and Sex	371–398
Determination of the sexual phenotype.	372
The development of germ cells.	382
Fertilization.	390
Chapter 13: Regeneration	399–416
Morphallaxis.	401
Epimorphosis.	405
Chapter 14: Growth and Post-Embryonic Development	417–442
Growth.	418
Molting and metamorphosis.	432
Aging and senescence.	437
Chapter 15: Evolution and Development	443–462
Modification of development in evolution.	444
Changes in the timing of developmental processes during evolution.	456
Glossary	463–470
Index	471–485
