List of symbols	xv
I Themes	I
1.1 Introduction	1
1.2 Selection	2
1.3 Constraint	4
1.4 Scaling	7
1.5 Phylogeny	9
1.6 Form and function in flight	9
1.7 Adaptation in avian wing design	10
1.8 Trade-offs: selection, phylogeny, and constraint	11
1.9 Conclusion	12
2 Selection	13
2.1 Introduction	13
2.2 Fisher's Fundamental Theorem of natural selection	15
2.2.1 Derivation of the Fundamental Theorem	16
2.2.2 Meaning of the Fundamental Theorem	22
2.2.3 Naming of the Fundamental Theorem	25
2.3 Fisher's quasi-conservation law of population mean fitness	26
2.4 Optimization and evolution	26
2.4.1 Redefining the adaptive landscape	27
2.4.2 Drowning Mount Improbable	28
2.5 Conclusions	29
3 Constraint	31
3.1 Introduction	31
3.2 Dimensional analysis	32
3.3 Swinging gaits	35
3.3.1 Theoretical constraints upon pendular brachiation	35
3.3.2 Empirical constraints upon brachiation	37

3.4 Walking gaits	39
3.4.1 Theoretical constraints upon walking	39
3.4.2 Empirical constraints upon walking	44
3.5 Running gaits	46
3.5.1 Theoretical constraints upon running	46
3.5.2 Empirical constraints upon running	49
3.6 Conclusions	51
4 Scaling	53
4.1 Introduction	53
4.2 Some terminological baggage	54
4.3 Physical models of scaling relationships	55
4.3.1 The West-Brown-Enquist model	56
4.3.2 Metabolic scaling	59
4.4 Statistical models of scaling relationships	61
4.4.1 Equation error models	62
4.4.2 Regression models	63
4.4.3 Errors-in-variables models	66
4.4.4 Logarithmic transformation	68
4.5 Conclusions	70
5 Phylogeny	73
5.1 Introduction	73
5.2 Comparative data and their pitfalls	74
5.3 On the origin of phylogenetic non-independence	76
5.3.1 Equation error in comparative data	76
5.3.2 Evolutionary models and equation error	78
5.4 The comparative method in theory	79
5.4.1 Independent contrasts	80
5.4.2 Generalized least squares	81
5.4.3 Specifying the error covariance structure	83
5.5 The comparative method in practice	85
5.6 Conclusions	89
6 Form and function in flight	91
6.1 Introduction	91
6.2 Scale effects in bird flight	92
6.3 Form and function in bird flight	94
6.3.1 Selection for large transient forces	95
6.3.2 Selection for high glide speed	95
6.3.3 Selection for low sink rate	97
6.3.4 Selection for low power requirements	98

6.3.5 Selection for high aerodynamic efficiency	99
6.4 Classical wing theory	101
6.5 Conclusions	102
7 Adaptation in avian wing design	105
7.1 Introduction	105
7.2 History	106
7.3 Ecological predictors	107
7.4 Flight morphology	113
7.5 Analyses	113
7.6 Results	116
7.7 Conclusions	121
8 Trade-offs: selection, phylogeny, and constraint	123
8.1 Introduction	123
8.2 The adaptive landscape revisited	124
8.3 Multi-objective optimization	125
8.4 Trade-offs in soaring flight	126
8.4.1 Performance objectives in soaring flight	126
8.4.2 Flight performance of soaring birds	129
8.4.3 Pareto optimality in soaring birds	132
8.5 Conclusions	135
