<i>Preface</i>	vii
<i>Acknowledgements</i>	ix
Introduction	1
I. Science	
1. The Miracle of Monism	21
2. What's the Fuss about Social Constructivism?	40
3. The Inseparability of Science and Values	55
II. Biology	
4. The Constituents of Life 1: Species, Microbes, and Genes	69
5. The Constituents of Life 2: Organisms and Systems	85
6. Understanding Contemporary Genomics	101
7. The Polygenomic Organism	116
8. It is not Possible to Reduce Biological Explanations to Explanations in Chemistry and/or Physics	128
9. Postgenomic Darwinism	143
III. Microbes	
10. Size Doesn't Matter: Towards a More Inclusive Philosophy of Biology <i>With Maureen A. O'Malley</i>	163
11. Metagenomics and Biological Ontology <i>With Maureen A. O'Malley</i>	188
12. Varieties of Living Things: Life at the Intersection of Lineage and Metabolism <i>With Maureen O'Malley</i>	206
13. Emerging Sciences and New Conceptions of Disease: Or, Beyond the Monogenomic Differentiated Cell Lineage	230

IV. Humans

14. Against Maladaptationism: Or, What's Wrong with Evolutionary Psychology	245
15. What Genes Are, and Why There Are No 'Genes for Race'	261
16. Causality and Human Nature in the Social Sciences	275
<i>Bibliography</i>	295
<i>Index</i>	331
