

BRIEF CONTENTS

Preface xiii

Teaching and Learning with

Genetics: Genes, Genomes, and Evolution xviii

Support Package xxi

About the Authors of *Genetics: Genes, Genomes, and Evolution* xxii

Manuscript reviewers xxiii

Prologue 1

- 1 Evolution, Genomes, and Genetics 13
- 2 The Central Dogma of Molecular Biology 28
- 3 Genome Structure, Organization, and Variation 72
- 4 Descent with Modification: Continuity and Variation in the Genome 129
- 5 The Inheritance of Single-gene Traits 189
- 6 The Cellular Basis for Mendelian Genetics 219
- 7 X-linked Genes and Sex Chromosomes 264
- 8 The Inheritance of Multiple Genes 308
- 9 The Locations of Genes on Chromosomes: Linkage and Genetic Maps 341
- 10 Human Genetic Mapping, Genome-wide Association Studies, and Complex Traits 383
- 11 Exchange and Evolution 419
- 12 Transcription: Reading and Expressing Genes 464
- 13 Translation: From Nucleic Acids to Amino Acids 517
- 14 Networks of Gene Regulation 555
- 15 Genetic Analysis of Cellular Processes 597
- 16 The Genetics of Populations 642
- 17 Metagenomes: Genome Analysis of Communities 698

Genetics: Genes, Genomes, and Evolution xviii

Support Package xxi

**About the Authors of Genetics: Genes, Genomes,
and Evolution** xxii

Manuscript reviewers xxiii

Prologue 1

TOOL BOX P.1 Model organisms 9

1 Evolution, Genomes, and Genetics 13

1.1 Darwin's finches: evolution, a story written in the genome and performed by the genes 13

1.2 Genome analysis of Darwin's finches 16

1.3 Connecting genome variation to beak variation 20

1.4 Summary: Darwin's finches and the Great Ideas of Biology 23

COMMUNICATING GENETICS 1.1 How do we represent gene and protein names? 22

2 The Central Dogma of Molecular Biology 28

2.1 Overview: the Central Dogma and the nature of the gene 28

2.2 The structure of DNA 29

2.3 DNA and the Central Dogma 42

2.4 The structure and function of genes: gene regulation 55

2.5 Transcription profiles 62

2.6 Summary: the Central Dogma 65

COMMUNICATING GENETICS 2.1 Sequence shorthand 39

TOOL BOX 2.1 The importance of the DNA backbone: separating DNA molecules by size 32

TOOL BOX 2.2 Making DNA visible: DNA stains and labels 34

TOOL BOX 2.3 The importance of the base pair: hybridization 40

TOOL BOX 2.4 cDNA 43

3 Genome Structure, Organization, and Variation 72

3.1 Overview: genomes, variation, and evolution 72

3.2 Genome size and organization 87

3.3 Genes and composition of the genome 98

3.4 Genetic change, redundancy, and robustness 100

3.5 Which genes are found in the genome? 103

3.6 Genetic changes and morphological differences 106

3.7	Summary: genome structure and variation	122
	TOOL BOX 3.1 Identifying natural variation	73
	TOOL BOX 3.2 DNA sequencing	78
	TOOL BOX 3.3 Genome assembly and annotation	84
	BOX 3.1 <i>Going Deeper</i> How are sequences added to genomes?	88
	BOX 3.2 <i>Going Deeper</i> Hox genes as an example of genome and morphological differences	113
	BOX 3.3 <i>Going Deeper</i> The origins of novel genes	120
4	Descent with Modification: Continuity and Variation in the Genome	129
4.1	Overview: evolution, replication, and repair	129
4.2	Continuity from templates	131
4.3	The initiation, polarity, and direction of replication	144
4.4	Errors, repair, and variation	153
4.5	Types of mutations	159
4.6	The fate and future of sequence changes	163
4.7	Inferring evolutionary history from sequence changes	168
4.8	Summary: descent with modification	183
	TOOL BOX 4.1 Polymerase chain reaction	138
	TOOL BOX 4.2 The application of the enzymes involved in replication in molecular cloning	148
	TOOL BOX 4.3 Building phylogenetic trees using DNA sequence data: some examples	176
	BOX 4.1 <i>An Historical Perspective</i> The Meselson–Stahl experiment and semi-conservative replication	133
	BOX 4.2 <i>A Human Angle</i> Telomeres	151
	BOX 4.3 <i>Quantitative Toolkit</i> The Luria–Delbrück fluctuation test	165
	BOX 4.4 <i>A Human Angle</i> Analyzing the Black Death by phylogenetics	172
5	The Inheritance of Single-gene Traits	189
5.1	Overview: genes and inheritance	189
5.2	Mendel: a man and his garden	190
5.3	Predicting the outcome of crosses	197
5.4	Probability methods for calculating the expected ratios	201
5.5	Using pedigrees	207
5.6	How do phenotypes arise from genotypes?	211
5.7	Summary: Mendel and his peas	212
	COMMUNICATING GENETICS 5.1 Genetic notation for genes and alleles	193
	COMMUNICATING GENETICS 5.2 The language of genetics	196
	BOX 5.1 <i>Going Deeper</i> Recessive and dominant alleles	195
	BOX 5.2 <i>An Historical Perspective</i> Did Mendel cheat?	199
	BOX 5.3 <i>Quantitative Toolkit</i> The chi-square test	205
6	The Cellular Basis for Mendelian Genetics	219
6.1	Overview of Mendel's contributions	219
6.2	Mitosis preserves chromosome number during somatic cell division	220

6.3	Meiosis reduces chromosome number during germ cell division	229
6.4	Spermatogenesis and oogenesis	246
6.5	Meiotic errors	251
6.6	Evolutionary origins of mitosis and meiosis	256
6.7	Summary: Mendel, meiosis, and molecules—putting things together	257
	TOOL BOX 6.1 Tetrads and tetrad analysis	243
	BOX 6.1 <i>Going Deeper</i> Sister chromatid cohesion and the cohesin complex	225
	BOX 6.2 <i>Going Deeper</i> Molecular mechanisms of crossing over	236
	BOX 6.3 <i>Going Deeper</i> Meiosis in polyploids	248
7	X-linked Genes and Sex Chromosomes	264
7.1	Overview: sex linkage and sex determination	264
7.2	Inheritance of the X chromosome and X-linked genes	265
7.3	X chromosome meiotic errors	274
7.4	Mechanisms of sex determination	277
7.5	Dosage compensation and X chromosomes	292
7.6	Summary: X-linked genes and sex determination	299
	COMMUNICATING GENETICS 7.1 Gene names	267
	COMMUNICATING GENETICS 7.2 Pedigree analysis for X-linked genes	272
	BOX 7.1 <i>Going Deeper</i> Sex-limited and sex-influenced traits	273
	BOX 7.2 <i>Going Deeper</i> How do organisms count X chromosomes?	278
	BOX 7.3 <i>A Human Angle</i> Sry, testis-determining factor, and sex determination in mammals	283
	BOX 7.4 <i>Going Deeper</i> The evolution of sex chromosomes	288
	BOX 7.5 <i>Going Deeper</i> DMRT and evolutionary tinkering with sex determination	291
	BOX 7.6 <i>A Human Angle</i> X chromosome inactivation and Xist	295
8	The Inheritance of Multiple Genes	308
8.1	Introduction: Mendel expanded and extended	308
8.2	Two genes on different chromosomes	309
8.3	Unexpected phenotypic ratios arising from a single gene	311
8.4	Unexpected phenotypic ratios arising from gene interactions	321
8.5	A functional definition of a gene: the complementation test	326
8.6	More complicated interactions between genes and the environment	329
8.7	Summary: the inheritance and phenotypes of two separate genes	333
	TOOL BOX 8.1 The use of epistasis to construct genetic pathways	323
	BOX 8.1 <i>A Human Angle</i> ABO blood types	314
	BOX 8.2 <i>Going Deeper</i> Pleiotropy and the genome	319
9	The Locations of Genes on Chromosomes: Linkage and Genetic Maps	341
9.1	Overview of linked and unlinked genes	341

9.2	Linked inheritance of genes on the same chromosome	342
9.3	Genetic maps	359
9.4	Other types of maps	370
9.5	Summary: genetic maps, genomes, and evolution	376
	COMMUNICATING GENETICS 9.1 Gametes, phenotypes, and test crosses in mapping	344
	TOOL BOX 9.1 Crossover suppression by balancer chromosomes	351
	BOX 9.1 <i>An Historical Perspective</i> Why didn't Mendel encounter linkage?	349
	BOX 9.2 <i>A Human Angle</i> Red-green color blindness	357
	BOX 9.3 <i>Going Deeper</i> Sex differences in recombination rate	364
	BOX 9.4 <i>Quantitative Toolkit</i> Three-factor crosses	366
10	Human Genetic Mapping, Genome-wide Association Studies, and Complex Traits	383
10.1	Overview of human gene mapping and complex traits	383
10.2	Linkage and genome-wide associations	385
10.3	Microarrays and polymorphisms	389
10.4	Haplotypes and human history	396
10.5	Complex traits	401
10.6	Complex traits and genome-wide association studies	410
10.7	Limitations of genome-wide association studies	411
10.8	Summary: genome-wide association studies combine evolution, genomes, and genetics	413
	COMMUNICATING GENETICS 10.1 Displaying haplotypes as pie charts	398
	BOX 10.1 <i>Going Deeper</i> Linkage disequilibrium	387
	BOX 10.2 <i>A Human Angle</i> Exome sequencing and direct searches for causative mutations	390
	BOX 10.3 <i>Quantitative Toolkit</i> Heritability	405
11	Exchange and Evolution	419
11.1	Overview: vertical and horizontal transmission of DNA	419
11.2	Transformation	422
11.3	Conjugation	426
11.4	Transduction by viruses	432
11.5	Transposable elements	441
11.6	Barriers to horizontal gene acquisition	445
11.7	Horizontal gene transfer and genome evolution	451
11.8	Summary: exchange and evolution by horizontal and vertical gene transfer	459
	TOOL BOX 11.1 Transformation with plasmid vectors	424
	TOOL BOX 11.2 Applications of site-specific recombination	438
	TOOL BOX 11.3 CRISPR applications: <i>in vivo</i> DNA editing and more	449
	BOX 11.1 <i>Going Deeper</i> Integrative conjugative elements	428
12	Transcription: Reading and Expressing Genes	464
12.1	Overview of gene expression and its regulation	464
12.2	Initiating transcription	467

12.3	Regulating the initiation of transcription	472
12.4	Chromatin and pre-initiation	490
12.5	Completing the transcript	495
12.6	From transcript to function	503
	COMMUNICATING GENETICS 12.1 Drawing genes	469
	TOOL BOX 12.1 Reporter genes for the analysis of gene expression	479
	TOOL BOX 12.2 microRNAs as an experimental tool: RNAi	508
	BOX 12.1 <i>A Human Angle</i> How toadstools affect transcription	497
13	Translation: From Nucleic Acids to Amino Acids	517
13.1	Translation from nucleic acids to polypeptides	517
13.2	The process of translation	519
13.3	Translational control	527
13.4	The intricate beauty of the genetic code	532
13.5	Post-translational regulation	544
13.6	Summary: gene expression and its regulation	547
	TOOL BOX 13.1 Evolution, genes, and genomes: sequence comparisons	539
	BOX 13.1 <i>Going Deeper</i> Nonsense suppressors	525
	BOX 13.2 <i>Going Deeper</i> The role of translational regulation in patterning the anterior–posterior axis of <i>Drosophila melanogaster</i>	530
14	Networks of Gene Regulation	555
14.1	Overview: networks of gene regulation	555
14.2	Operons in bacteria	558
14.3	Principles of gene regulatory networks	576
14.4	Summary: transcription networks	590
	TOOL BOX 14.1 Chromatin immunoprecipitation (ChIP)	581
	BOX 14.1 <i>Going Deeper</i> Attenuation and the <i>trp</i> operon	562
	BOX 14.2 <i>Quantitative Toolkit</i> Bacterial growth curves: a quantitative perspective	566
	BOX 14.3 <i>Going Deeper</i> Genetic polarity in bacteria	574
15	Genetic Analysis of Cellular Processes	597
15.1	Overview: the power of genetic screens	597
15.2	True in the elephant? A model for gene regulation from genetic screens of lactose utilization in bacteria	606
15.3	A foot in the door: <i>Drosophila</i> embryonic development	614
15.4	Ordering genes into pathways	623
15.5	Summary: genetic analysis	635
	TOOL BOX 15.1 Genome-wide mutant screens	604
	TOOL BOX 15.2 No <i>lac</i> of reagents	608
	BOX 15.1 <i>An Historical Perspective</i> Archibald Garrod and inborn errors of metabolism	599
	BOX 15.2 <i>Quantitative Toolkit</i> Estimating the number of genes: saturation in genetic screens	620
16	The Genetics of Populations	642
16.1	Overview of population genetics	642

16.2	Allele frequencies and populations at equilibrium	645
16.3	Changes in genotype frequencies: non-random mating	652
16.4	Factors affecting allele frequencies	657
16.5	Selection and differential reproductive ability	670
16.6	Population genetics of bacteria and other asexually reproducing organisms	687
16.7	Summary: the genetic structure of populations	691
	COMMUNICATING GENETICS 16.1 Depicting haplotype frequencies	649
	COMMUNICATING GENETICS 16.2 Muller plots	688
	BOX 16.1 <i>Quantitative Toolkit</i> Quantitative concepts in population genetics	658
	BOX 16.2 <i>Going Deeper</i> Speciation	663
	BOX 16.3 <i>A Human Angle</i> Tracking migration with mitochondrial and Y chromosome DNA	665
	BOX 16.4 <i>An Historical Perspective</i> Selection and adaptation	672
	BOX 16.5 <i>Going Deeper</i> Types of selection	675
	BOX 16.6 <i>A Human Angle</i> The sickle-cell trait heterozygote advantage	678
17	Metagenomes: Genome Analysis of Communities	698
17.1	What is a metagenome?	698
17.2	The composition of metagenomes and microbiomes	702
17.3	Selection at the level of the holobiont	709
17.4	Connecting metagenome composition and structure to metabolism and community function	716
17.5	Metagenomes in action	720
17.6	Summary: metagenomes, evolution, genomes, and genetics	722
	COMMUNICATING GENETICS 17.1 Is "microbiome" a "biome" word or an "omics" word?	699
	TOOL BOX 17.1 Culture barriers in bacteria	703
	BOX 17.1 <i>Going Deeper</i> How should we define bacterial species?	707
	BOX 17.2 <i>A Human Angle</i> Transplanting microbiomes	712
	BOX 17.3 <i>A Human Angle</i> Ancient metagenomes	717
	Glossary	728
	Index	745
