Part I Physiological Responses

1

1 Effects of salinity as a stressor to aquatic invertebrates

3

Chris Hauton

- 1.1 Introduction 3
- 1.2 An overview of the mechanisms for osmotic control 4
- 1.3 The cellular stress response (CSR) to salinity perturbation 6
- 1.4 The cellular homeostatic response (CHR) and maintenance of cell volume 8
- 1.5 The energetic and metabolic requirements of osmotic control and the consequences for organism fitness 10
- 1.6 Physiological and endocrine responses to salinity stress 12
- 1.7 Impacts of salinity exposure on ontogeny, larval settlement, and growth 13
- 1.8 Impacts of salinity stress on immune function, the incidence of disease, and tissue pathology 15
- 1.9 Summary 18

2 Respiratory responses of marine animals to environmental hypoxia

25

John I. Spicer

- 2.1 Introduction 25
- 2.2 Oxyregulators and oxyconformers 25
- 2.3 Potential respiratory responses to environmental hypoxia 27
- 2.4 Perspectives 33

3 Physiological effects of ocean acidification on animal calcifiers

36

Inna M. Sokolova, Omera B. Matoo, Gary H. Dickinson, and Elia Beniash

- 3.1 Introduction 36
- 3.2 Corals 37
- 3.3 Molluscs 39
- 3.4 Crustaceans 41
- 3.5 Echinoderms 44
- 3.6 Conclusions and perspectives 46

4 Physiological responses of marine invertebrates to thermal stress	56
Nia M. Whiteley and Clara L. Mackenzie	
4.1 Introduction	56
4.2 Thermal dependency of physiological responses: underlying principles and concepts	57
4.3 Repair mechanisms during short-term thermal challenges	58
4.3.1 Protection against protein denaturation	58
4.3.2 Protection against oxidative stress	59
4.4 Variation in physiological responses to thermal stress across marine environments	60
4.4.1 Physiological variations with latitude	60
4.4.2 Physiological variations with vertical zonation	63
4.5 Future threats: physiological responses to multiple stressors	64
4.5.1 Physiological responses to warming and ocean acidification	65
4.5.2 Physiological responses to warming and hypoxia	65
4.5.3 Physiological responses to warming and salinity stress	66
4.6 Conclusions	66
5 Physiological impacts of chemical pollutants in marine animals	73
Ceri Lewis and Eduarda M. Santos	
5.1 Introduction	73
5.2 Oxidative stress	74
5.3 Genotoxicity in marine organisms	75
5.4 Immunotoxicity in marine organisms	77
5.5 Endocrine disruption	78
5.6 Spermiotoxicity	82
5.7 Mechanical harm—marine plastics	83
5.8 Combined effects of multiple stressors	84
5.8.1 Ocean acidification and contaminant interactions	85
5.8.2 Hypoxia and chemical stress	85
5.9 Conclusion	87
6 Nitrogen stress in the marine environment: from scarcity to surfeit	93
Erica B. Young and John A. Berges	
6.1 Introduction	93
6.1.1 Nitrogen forms that need to be considered	94
6.1.2 The spectrum of nitrogen stress	94
6.1.3 Some important concepts and definitions	95
6.1.4 Our approach and major paradigms	97
6.2 Nitrogen stress in photoautotrophs	97
6.2.1 Microalgae	97
6.2.2 Marine macroalgae	99
6.2.3 Marine angiosperms—saltmarsh grasses, seagrasses, and mangroves	100
6.3 Nitrogen stress in animals	103
6.3.1 Low-N stress in animals	103
6.3.2 High-N stress in animals	105

6.4 Nitrogen stress in symbioses, associations, and mixotrophy	106
6.4.1 Coral-zooxanthellae symbioses	106
6.4.2 Nitrogen-fixing associations	107
6.4.3 Mixotrophy	107
6.5 Research challenges	107
6.5.1 Physiology versus ecology	107
6.5.2 Interactions among nitrogen stress and other factors	108
6.5.3 Complex feedbacks and interactions among individuals and populations	108
6.6 Recent and emerging approaches	109
7 The cellular responses of marine algae and invertebrates to ultraviolet radiation, alone and in combination with other common abiotic stressors	117
David J. Burritt and Miles D. Lamare	
7.1 Introduction	117
7.2 Key physiological responses to UV-B	118
7.2.1 DNA damage	118
7.2.2 Direct damage to proteins	118
7.2.3 Oxidative stress	118
7.2.4 Decreased photosynthesis	120
7.2.5 Apoptosis and cell-cycle genes	120
7.3 Spectral irradiances and biological weighting functions	120
7.4 Interactive effects of UV-R with other common environmental stressors	122
7.4.1 Interactions between UV-R and temperature	122
7.4.2 Interactions between UV-R, $p\text{CO}_2$, and ocean acidification	125
7.4.3 Interactions between UV-R and pollution	127
7.4.4 Interactions between UV-B and salinity	128
7.5 UV-B and climate change (multiple-stressor interactions)	129
7.6 Possible sites for interaction in marine organisms exposed to UV-R and other stressors	130
7.7 Conclusions	130
8 Physiological effects of noise on aquatic animals	135
Natacha Aguilar de Soto and Caitlin Kight	
8.1 Introduction	135
8.2 Effects of noise on the hearing system	138
8.2.1 Invertebrates	139
8.2.2 Fish	140
8.2.3 Turtles	141
8.2.4 Marine mammals	141
8.2.5 Seabirds	142
8.3 Mechanical stress and barotrauma	142
8.3.1 Invertebrates	143
8.3.2 Fish	144
8.3.3 Marine turtles	145
8.3.4 Marine mammals	145
8.3.5 Seabirds	146

8.4	Stress responses	146
8.4.1	Invertebrates	146
8.4.2	Fish	147
8.4.3	Turtles	148
8.4.4	Marine mammals	148
8.4.5	Seabirds	150
8.5	Conclusions	151
Part II Ecological Responses		159
9	Effects of changing salinity on the ecology of the marine environment	161
Katie Smyth and Mike Elliott		
9.1	Salinity as a driver affecting marine ecology	161
9.1.1	A brief introduction to salinity	161
9.1.2	The importance of salinity to aquatic organisms	161
9.1.3	Osmo-/ionoregulation effects	161
9.1.4	The effects of salinity coupled with temperature	163
9.1.5	pH effects	163
9.1.6	Effects on ecosystem function	164
9.2	Salinity change as an environmental problem	164
9.2.1	Ice melt/formation in polar regions	164
9.2.2	Dilution in estuarine and coastal environments	164
9.2.3	Naturally hypersaline areas	167
9.2.4	Anthropogenic causes of environmental salinity change	169
9.3	Summary	170
10	The ecological consequences of marine hypoxia: from behavioural to ecosystem responses	175
Bettina Riedel, Robert Diaz, Rutger Rosenberg, and Michael Stachowitsch		
10.1	Welcome to the Anthropocene!	175
10.2	Coastal hypoxia and anoxia: turning 'normal' into 'extreme' habitats	175
10.2.1	Hypoxia: occurrence, development, and crux of the matter	176
10.2.2	Definitions and thresholds: we can agree to disagree	179
10.3	Impact of hypoxia in coastal environments: the ecological implications	180
10.3.1	Individual- and population-level effects	180
10.3.2	Community-level effects	183
10.3.3	Ecosystem-level effects	186
10.4	Interplay and synergy of multiple stressors	188
10.5	Conclusions	189
11	Ecological effects of ocean acidification	195
M. Débora Iglesias-Rodriguez, Katharina E. Fabricius, and Paul McElhany		
11.1	Introduction	195
11.2	Biochemical and organism responses to increased CO ₂	196
11.2.1	Photosynthesis	196
11.2.2	Calcification	197

11.2.3	Other physiological and neurological effects of increased $p\text{CO}_2$	198
11.2.4	Variability in the vulnerability within and across taxa	198
11.2.5	Susceptibility of different life stages to ocean acidification	199
11.3	Tools and strategies to predict the ecological effects of ocean acidification	200
11.4	State of knowledge about ecological responses to ocean acidification	201
11.4.1	Polar regions	201
11.4.2	Temperate and tropical regions	202
11.4.3	Ocean acidification and multiple stressors	204
11.5	Ecosystem models of ocean acidification effects	204
11.6	Conclusions	206
12	Effects of temperature stress on ecological processes	213
	Elizabeth A. Morgan, Alastair Brown, Benjamin J. Ciotti, and Anouska Pantou	
12.1	Summary	213
12.2	Global spatial trends in mean temperature and temperature variability	213
12.2.1	Recent temperature observations	215
12.2.2	Temperature projections	215
12.3	Influences of thermal stress on ecological processes	216
12.3.1	Organism-level influences	216
12.3.2	Influences on biotic interactions	217
12.3.3	Influences on species distributions	217
12.4	Community responses to temperature stress	221
12.4.1	Phytoplankton and the microbial loop	221
12.4.2	Habitat complexity	222
12.4.3	Community structure	223
12.5	Interactions of temperature with other stressors	223
12.6	Conclusion	224
13	Chemical pollutants in the marine environment: causes, effects, and challenges	228
	Catriona K. Macleod, Ruth S. Eriksen, Zanna Chase, and Sabine E. Apitz	
13.1	Introduction	228
13.2	Types of pollutant	228
13.2.1	Nutrients	228
13.2.2	Pharmaceuticals and personal care products	228
13.2.3	Agricultural chemicals (pesticides and fertilizers)	230
13.2.4	Antifoulants	231
13.2.5	Disinfectants	232
13.2.6	Hydrocarbons/oil spills	232
13.2.7	Plastics (macro and micro)	233
13.2.8	Radioactive substances	234
13.2.9	Metals	234
13.2.10	Freshwater (environmental flows)	235
13.2.11	Dredging waste/sediment (as a source and sink)	236
13.2.12	Emerging contaminants	236
13.3	Pollutant effects	236

13.4 Challenges for management and research	237
13.4.1 Monitoring	239
13.5 Recommendations for the future	239
14 Importance of species interactions in moderating altered levels of reactive nitrogen	247
Martin Solan	
14.1 Introduction	247
14.2 A brief summary of the nitrogen cycle	249
14.3 Effects of reactive nitrogen on biodiversity and biological interactions	251
14.3.1 Alteration of food-web structure and biodiversity	251
14.3.2 Herbivory	252
14.3.3 Predation	253
14.3.4 Facilitation and competition	254
14.3.5 Anthropogenic nitrogen and other stressors	254
14.4 A comment on future research directions	255
15 Ecological impacts of ultraviolet-B radiation on marine ecosystems	261
Sébastien Moreau, Francesca Vidussi, Gustavo Ferreyra, and Behzad Mostajir	
15.1 Introduction	261
15.1.1 UVBR penetration through the atmosphere: the role of stratospheric ozone	261
15.1.2 PAR and UVR penetration in the water column	264
15.1.3 UVBR effects at the cell/organism levels	264
15.2 UVBR effects on the food webs of different marine ecosystems	265
15.2.1 Effects of UVBR on the food web components of the polar oceans	265
15.2.2 UVBR effects on the food web components of meso- to eutrophic coastal waters, fronts, and upwellings	268
15.2.3 UVBR effects on the food web components of oligotrophic systems such as oceanic gyres	269
15.2.4 Effects of UVBR on benthic and coral reefs food web components	269
15.3 UVBR impacts and other major global change processes	271
15.3.1 Simultaneous effects of UVBR and rising temperatures on marine ecosystems	271
15.3.2 Simultaneous effects of enhanced UVBR and CO ₂ on marine ecosystems	273
15.4 Conclusion and perspectives	273
16 Ecological impacts of anthropogenic underwater noise	282
Jenni A. Stanley and Andrew G. Jeffs	
16.1 Introduction	282
16.2 A primer on underwater sound	283
16.3 The importance of sound for marine organisms	283
16.4 Sources of anthropogenic noise in the ocean	285
16.4.1 Vessels	286
16.4.2 Sonar	287
16.4.3 Seismic seabed profiling	288
16.4.4 Other activities	288

16.5	Ecological impacts of underwater noise on marine systems	289
16.5.1	Extent of evidence for ecological impacts	289
16.5.2	Swimming behavioural responses	290
16.5.3	Vocalization behavioural responses	290
16.5.4	Reproductive behavioural responses	291
16.5.5	Antipredator behavioural responses	291
16.5.6	Physiological responses	291
16.5.7	Masking of acoustic communication	291
16.5.8	Anthropogenic sound as additional stressor	292
16.6	Conclusion	292

Part III Societal Implications **299**

17 Managing complex systems to enhance sustainability **301**

Simon Willcock, Sarwar Hossain, and Guy M. Poppy

17.1	Introduction	301
17.2	The planetary boundaries concept	301
17.3	Linking planetary boundaries with social systems	302
17.4	Tipping points	303
17.5	Policy support oriented research frameworks	305
17.6	Research frameworks translated into interdisciplinary models	307
17.7	Managing risk in spite of uncertainty	309
17.8	Conclusions	311

18 Using the Ecosystem Approach to manage multiple stressors in marine environments **313**

Zoë Austin and Piran C.L. White

18.1	Introduction	313
18.1.1	The Ecosystem Approach	313
18.2	Ecosystem services	314
18.2.1	Ecosystem services from the marine environment	315
18.3	Stressors to the marine environment and the impacts on ecosystem services	316
18.3.1	The impact of human-induced stressors on marine ecosystem services	317
18.3.2	Cumulative impacts and interactions associated with multiple stressors	319
18.4	Using an ecosystem services approach to managing multiple stressors: a framework	319
18.4.1	Engage stakeholders in a participatory process	319
18.4.2	Set clear goals and outcomes	320
18.4.3	Incorporate interactions and trade-offs	320
18.4.4	Use ecosystem service mapping	321
18.4.5	Manage for biodiversity and resilience	321
18.4.6	Plan for emerging ecosystem services	321
18.4.7	Establish continuous evaluation and assessment	321

18.5 Framework tools	322
18.5.1 Stakeholder engagement tools	322
18.5.2 Tools for investigating ecosystem service trade-offs	323
18.5.3 Tools for mapping ecosystem services	323
18.6 Challenges for the future	324
18.6.1 Challenges of marine systems	324
18.6.2 Framework-specific challenges	324
18.7 Conclusion	325
19 Quantifying the economic consequences of multiple stressors on the marine environment	329
Nick Hanley	
19.1 Introduction	329
19.2 Valuing changes in ecosystem services and in biodiversity	329
19.3 Some case studies	332
19.3.1 Valuing the deep sea	333
19.3.2 Values from reducing pathogen levels in coastal waters	334
19.3.3 Values from reductions in nutrient pollution in the Baltic Sea	336
19.3.4 Galway Bay	337
19.4 Conclusions	340
Subject Index	343
