1 The high altitude environment	1
1.1 Introduction	1
1.2 Global distribution of high altitude areas	5
1.3 The climatic setting	7
1.3.1 Temperature	8
1.3.2 Atmospheric pressure and humidity	9
1.3.3 Solar radiation	10
1.3.4 Precipitation, water balance, and wind	11
1.4 The palaeo-environmental perspective	15
1.5 The surrounding terrestrial ecosystems	16
1.5.1 Treelines	16
1.5.2 Alpine vegetation	17
1.5.3 Landscape forming and soil types	17
2 The waterscape at high altitudes	21
2.1 Introduction	21
2.2 Geographical distribution patterns	22
2.3 Running waters	26
2.3.1 Longitudinal patterns and stream sizes within catchments	26
2.3.2 Channel form and habitat types	27
2.4 Lakes	30
2.4.1 The origin and dynamics of lakes at high altitudes	30
2.4.2 Glacial lakes	32
2.4.3 Volcanic, tectonic, and landslide lakes	35
2.5 Wetlands and ponds	36
2.5.1 Distribution and ecological role	36
2.5.2 Wetland types, structure, water sources, and dynamics	37
3 Living conditions in high altitude waters	40
3.1 Introduction	40
3.2 Temperature and oxygen	42
3.2.1 Water temperature and altitude	42
3.2.2 Dissolved oxygen in relation to altitude	44
3.2.3 Temporal dynamics in temperature and oxygen	44
3.2.4 Water sources and environmental stability	48
3.2.5 Lake stratification and mixing	50

3.3 Inorganic water chemical properties	51
3.3.1 Conductivity	53
3.3.2 Inorganic carbon, alkalinity, and pH	54
3.4 Inorganic suspended solids	55
3.5 Dissolved organic matter	57
3.6 Nitrogen, phosphorus, and chlorophyll	57
3.7 Light, ultraviolet radiation, and transparencies	61
4 Organisms and diversity patterns at high altitudes	66
4.1 Introduction	66
4.2 Richness, speciation, and biogeography at high altitudes	66
4.2.1 Species richness decreases at high altitudes, but why?	66
4.2.2 What patterns in endemism tell us	68
4.2.3 Biogeographical aspects	69
4.3 Birds, reptiles, and amphibians	70
4.3.1 Birdy high places	70
4.3.2 Herpetofauna: a few species here, there, and everywhere	70
4.3.3 Enigmatic and emblematic endemics	71
4.4 Fishes	72
4.4.1 An overwhelming altitude effect	72
4.4.2 Diversification on high plateaus	73
4.5 Macroinvertebrates	74
4.5.1 The ubiquitous assemblages	74
4.5.2 Worldwide similarities reflecting the environment	80
4.6 The zooplankton	81
4.6.1 The main groups	81
4.6.2 The diverse crustacean plankton in Andean waters	82
4.7 Vascular plants and bryophytes	84
4.7.1 Reaching astonishing altitudes	84
4.7.2 Broad ranges and few endemics	86
4.8 Bacteria, algae and other microbes	87
4.8.1 The benthic consortium	87
4.8.2 The pelagic communities	89
5 Strategies and adaptations to aquatic life at high altitude	92
5.1 Introduction	92
5.2 High ultraviolet radiation: effects and protection	92
5.2.1 Ultraviolet effects at multiple levels	92
5.2.2 Avoiding and coping with ultraviolet radiation	93
5.3 Coping with low temperatures	98
5.3.1 Multiple strategies in aquatic insects	98
5.3.2 Maintaining metabolism and growth at low temperature	102
5.4 Low oxygen pressure at high altitudes	104
5.4.1 Signs of oxygen deficit effects on communities	104
5.4.2 Adaptations to low oxygen availability	104
5.5 Scarceness of inorganic carbon: aquatic plants	108

6 Community dynamics in highland watersheds	111
6.1 Introduction	111
6.2 High altitude watersheds: a model to explore metacommunity dynamics	111
6.2.1 Some basics of community ecology in high altitude freshwater systems	111
6.2.2 Multi-scale, hierarchical, heterogeneous watersheds	113
6.3 Dispersal: a central process in high altitude watersheds	118
6.3.1 Dispersal at various scales	118
6.3.2 Dispersal: a species-specific process	119
6.3.3 Species turnover	119
6.4 Metacommunity assembly: from microbes to birds	120
6.4.1 Microbes	120
6.4.2 Plankton	121
6.4.3 Macroinvertebrates	122
6.4.4 Vertebrates	126
6.5 In search of refinements for dispersal research	127
6.5.1 Windy mountains: accounting for symmetric directional spatial processes	127
6.5.2 Watershed genetics	129
6.6 Dynamical metacommunities	129
6.6.1 What theory says	129
6.6.2 Synchrony and asynchrony in natural communities	130
 7 Energy flow and species interactions at the edge	 133
7.1 Introduction	133
7.2 Material cycling: the landscape-continuum model	133
7.2.1 Intertwined land and water habitats	133
7.2.2 The importance of the vegetation gradient	134
7.3 Energetic pathways in high altitude watersheds	135
7.3.1 Lake life in mountaintops	135
7.3.2 Lakes and ponds in the greener belt	135
7.3.3 What about lake seasonality?	136
7.3.4 Glacier-fed streams in the proglacial zone	136
7.3.5 Unshaded streams in grasslands	137
7.3.6 Key effects of forests on stream metabolism	138
7.3.7 Drivers of energetic pathways	139
7.4 Three food webs in the heights	140
7.4.1 Defining food web characteristics	140
7.4.2 Andean altiplanic lakes: salt, fish, and flamingos	140
7.4.3 Rocky Mountain ponds: freeze-up and salamanders	142
7.4.4 Glacier-fed streams: macroinvertebrates in the diet	142
7.5 Feeding strategies in harsh environments	144
7.5.1 Specialists, omnivores, . . . and cannibals	144
7.5.2 Trophic interactions with the riparian zone	146
7.6 Species interactions and harshness gradients	146
7.6.1 Niche construction and engineering species	147
7.6.2 Positive interactions at elevated stress levels	147

7.6.3	Species coexistence in stressed environments	150
7.6.4	The functional role of species diversity	152
7.6.5	Species interactions, ecosystem shifts, and feedback loops	154
8	High altitude waters in the face of climate change	155
8.1	Introduction	155
8.2	High altitude waters: an ideal model to study climate change	156
8.2.1	A region where climate changes are most severe	156
8.2.2	Climate change sentinels in the heights	159
8.3	Abiotic impacts of climate change on waterscapes	160
8.3.1	Changes in water temperature	160
8.3.2	Changes in the water cycle	161
8.3.3	Other abiotic changes	163
8.4	Ecosystem responses to climate change	164
8.4.1	Terrestrial vegetation: key player in warming waterscapes	164
8.4.2	Material cycles	164
8.5	High altitude aquatic life in a warming world	165
8.5.1	A short primer of physiological challenges in warming waters	165
8.5.2	Adapt, migrate, or perish . . .	168
8.5.3	Thresholds and ecological states	171
8.6	Study case: Glacial-fed streams in the face of global warming	173
8.6.1	The vanishing worldwide glaciers	173
8.6.2	Flow change consequences on biota	175
8.6.3	The glacier-heterogeneity-biodiversity paradigm	175
8.6.4	Uncovering the dynamics of ecological changes	178
9	A growing human footprint in the highlands	180
9.1	Introduction	180
9.2	Population and contamination	183
9.2.1	Crowded tropical highlands	183
9.2.2	Mountains and glaciers as pollutant concentrators	184
9.3	Water contamination	185
9.3.1	Persistent organic pollutants and polycyclic aromatic hydrocarbons	185
9.3.2	Mining and metals	186
9.3.3	Nutrient enrichment	189
9.4	The use and abuse of water flows	191
9.4.1	Dam building	191
9.4.2	Water abstraction and diversion	192
9.5	Land use changes	194
9.5.1	The advancing agricultural frontier	194
9.5.2	Fire events	197
9.5.3	'Cowspiracy' in the heights	198
9.6	Introduced species	199
9.6.1	Permeable and sensitive highland waterscapes	199
9.6.2	The ecology of fish introduction	201

10 Conserving sustainable ecosystem services	204
10.1 Introduction	204
10.2 The challenges of high altitude water conservation	204
10.2.1 Sustainable development of local livelihoods	204
10.2.2 Ecosystem services: a key concept for conservation research	205
10.3 Some crucial ecosystem services	207
10.3.1 Provisioning services: water, food, and much more	207
10.3.2 Regulating services: water flow and carbon storage	209
10.3.3 Cultural services: spirits and tourists	209
10.3.4 Valuation of ecosystem services	210
10.4 Indicators and scenarios	212
10.4.1 Monitoring programmes for conservation	212
10.4.2 Ecological indicators to change	212
10.4.3 Wanted! E-flows	213
10.4.4 Building models and scenarios for complex socio-ecological systems	214
10.5 Conservation strategies	215
10.5.1 Protected areas	215
10.5.2 Species-centred protection	220
10.5.3 Water funds	221
10.5.4 Promoting local support for waterscape conservation	223
10.5.5 Mitigation and restoration	223
10.5.6 A few more recommendations for policy-makers	224
