
Contents

1	Setting the scene	1
1.1	Background	1
1.2	A history of invasion science	1
1.2.1	Preparing the stage	1
1.2.2	Charles Elton to 1980	3
1.2.3	1980–2010	6
1.2.4	Since 2010	9
1.3	The scope of the book	12
	References	14

Part I	Spread	19
---------------	---------------	-----------

2	The dynamics of spread	21
2.1	Introduction	21
2.2	Exponential and sigmoidal expansion	22
2.3	Linear expansion	26
2.4	Biphasic expansion	28
2.5	Acceleration	33
2.6	Lag phase	34
2.7	Boom and bust	37
2.8	Concordance and discordance	39
	References	42

3	Modelling spatial dynamics	48
3.1	Introduction	48
3.2	Modelling core	49
3.2.1	Movement and dispersal	49
3.2.2	Reaction and diffusion	51
3.2.3	Integrodifference equations and dispersal kernels	53
3.3	Modelling context	54
3.3.1	Environmental heterogeneity	54
3.3.2	Other contextual factors	57

3.4 Modelling methods	58
3.4.1 Individual-based models	58
3.4.2 Cellular automata and lattice models	60
3.4.3 Gravity, network, and metapopulation models	62
3.5 Conclusions	63
References	64
4 From dispersal to boosted range expansion	70
4.1 Boosted range expansion	70
4.1.1 Boosted invasion dynamics	71
4.1.2 Reid's paradox	72
4.2 Rapid evolution at the range front	73
4.2.1 Dispersal syndrome	73
4.2.2 Spatial sorting and selection	74
4.3 Augmented dispersal	77
4.3.1 Dispersal and its kernels	77
4.3.2 Long-distance dispersal	78
4.3.3 Human-mediated dispersal	81
4.4 Skellam's formula revised	86
References	88
5 Non-equilibrium dynamics	96
5.1 Balance of nature	96
5.2 Positive density dependence: the Allee effect	101
5.3 Negative density dependence	104
5.4 Niche shifts	106
5.5 Spatial synchrony	110
5.6 Space-for-time substitution	113
5.7 Spatial autoregressive models	114
References	117
Part II Impact	127
6 Biotic interactions	129
6.1 Pairwise interactions	129
6.1.1 A simple model	129
6.1.2 Antagonism	130
6.1.3 Mutualism	132
6.1.4 Competition	134
6.2 Mediated interactions	136
6.3 Interaction strength	139
6.4 Spatial interactions	145
6.5 Interaction promiscuity and switching	148
6.6 Novel eco-evolutionary experiences	151
References	157

7 Regime shifts	169
7.1 Regime and bifurcation	169
7.2 System reshuffling	172
7.3 Evolutionary regimes	173
7.4 Early warning signals	174
7.4.1 Critical slowing down	174
7.4.2 Other early warning signals	177
7.5 Minnow-bass bistability	178
7.6 Reinforcing feedbacks during invasion	181
References	185
8 Community assembly and succession	191
8.1 Ecological community invaded	191
8.2 Species coexistence	192
8.3 Assembly succession via invasion	196
8.3.1 Community succession	196
8.3.2 Local-scale succession	198
8.3.3 Regional-scale succession	200
8.4 Diversity signature	202
8.4.1 Invasion paradox	202
8.4.2 Species turnover	207
8.5 Large-scale assembly patterns	210
8.5.1 Alien island biogeography	210
8.5.2 Alien biomes	211
References	216
9 Monitoring and management	222
9.1 Introduction	222
9.2 Essential variables for monitoring	222
9.3 Monitoring strategies	227
9.4 Impact and risk metrics	231
9.5 Prioritization	233
9.6 Invasion debt	236
9.7 Political will	238
9.8 Bioeconomics of optimal control	239
9.9 Economic valuation	243
9.10 Dynamic programming	246
9.11 Spatial optimization	250
References	254

Part III Synthesis **265**

10 Complex adaptive networks	267
10.1 Ecological networks under invasion	267
10.2 Ecological network architecture	269

10.3 Network emergence via interaction switching	270
10.4 Invasibility of ecological networks	275
10.5 Network architecture and stability	279
10.6 Co-evolving networks under invasion	282
10.7 Profiling an invader	284
10.8 Evolving towards marginal stability	286
References	287

11 Managing biological invasions in the Anthropocene 294

11.1 Background	294
11.2 Biological invasions and social-ecological systems	300
11.3 The driver, pressure, state, impact, response (DPSIR) framework	301
11.4 Biological invasions as a wicked problem	303
11.5 Biological invasions and 'novel ecosystems'	304
11.6 Invasion science 2050	306
References	307

Glossary	309
Taxonomic index	317
General index	319
