xxi

Part 1 Concepts in cell biology and examples of multiscale studies in biology	1
1 Introduction to cell biology	
Franz BRUCKERT	3
1.1 Levels of organization in cells	5
1.2 Protein localization within cells	13
1.3 Protein activation in cells	16
1.4 Practical conclusions	22
References	24
2 A small leak will sink a great ship: HIV–host interactions	
Nikolas HEROLD, Hans-Georg KRÄUSSLICH, and Barbara MÜLLER	25
2.1 Introduction	27
2.2 HIV assembly and release	29
2.3 HIV maturation	31
2.4 HIV entry	33
2.5 Future of integrative HIV research	38
Acknowledgement	39
References	39
3 Floral development: an integrated view	
Hicham CHAHTANE, Grégoire DENAY, Julia ENGELHORN, Marie MONNIAUX, Edwige MOYROUD, Fanny MOREAU, Cristel CARLES, Gabrielle TICHITSKY, Chloe ZUBIETA, and François PARCY	43
3.1 Description of floral development	47
3.2 Genetic control of floral development in Arabidopsis	54
3.3 Transcription and chromatin dynamics in the “seq” era	61
3.4 Modeling TF–DNA binding to predict transcriptional regulation	82
3.5 Layers of chromatin regulation and their actors	86
3.6 Floral transcription factors: a structural view	94
References	100

8 Forces in plant development	
Olivier HAMANT	209
8.1 Overview	211
8.2 Understanding the role of forces at the tissue scale	221
8.3 Understanding the role of forces at the cell scale	236
8.4 Conclusion	242
References	243
9 An introduction to modeling the initiation of the floral primordium	
Christophe GODIN, Eugenio AZPEITIA, and Etienne FARCOT	247
9.1 Introduction	250
9.2 Specifying growth points on meristem domes	251
9.3 Modeling the regulation of floral initiation	265
9.4 Conclusion	277
References	278
Part 4 Forces in biology: reshaping membranes	285
10 Membrane remodeling: theoretical principles, structures of protein scaffolds and forces involved	
Michael M. KOZLOV, Winfried WEISSENHORN, and Patricia BASSEREAU	287
10.1 Introduction	290
10.2 Theoretical principles of membrane remodeling	291
10.3 Structural basis for membrane remodeling by a protein scaffold	304
10.4 Forces involved in remodeling biological membranes	314
Acknowledgments	331
References	331
Part 5 Conformational changes and their implications in diseases	351
11 Protein conformational changes	
Yves GAUDIN	353
11.1 Protein conformational changes	355
11.2 Conformational changes in viral fusion proteins	364
11.3 From conformational diseases to cell memory	377
References	388
Part 6 Membrane transporters: from structure to function	397
12 The dos and don'ts of handling membrane proteins for structural studies	
Christine ZIEGLER	399
12.1 Introduction	401
12.2 Membrane proteins—Fragile! Handle with care!	401

12.3 Determining the structure of a membrane protein: difficult but not impossible	408
References	411
13 Molecular simulation: a virtual microscope in the toolbox of integrated structural biology	
François DEHEZ	413
13.1 Introduction	415
13.2 Modeling forces in molecular simulation: the force field	417
13.3 Modeling the time evolution of biological systems using molecular dynamics	421
13.4 Integrating molecular simulations with structural biology	426
13.5 Conclusion	432
References	433
