Glossary	xvii
Table of abbreviations	xx
1 A functional approach to biological diversity	1
1.1 Diversity or diversities?	1
1.2 Plants and functions	2
1.3 Functional diversity and comparative plant ecology	4
1.4 Questions addressed by a functional approach to diversity	5
1.5 Key points	6
1.6 References	7
2 Trait-based ecology: definitions, methods, and a conceptual framework	9
2.1 Introduction	9
2.2 Traits: definitions and protocols	10
2.3 Traits and the comparative approach in ecology	15
2.4 Conceptual framework: organisms, communities, ecosystems	19
2.5 Conclusions	21
2.6 Key points	21
2.7 References	22
3 The functional characterization of plants	26
3.1 Introduction	26
3.2 Traits representative of the three major axes of ecological variation	26
3.3 Beyond the three major axes of variation	43
3.4 Traits and phylogeny	53
3.5 Conclusions	55
3.6 Key points	55
3.7 References	56
4 Gradients, response traits, and ecological strategies	64
4.1 Introduction	64
4.2 Environmental gradients	64
4.3 Environmental factors and trait intraspecific variability	67
4.4 Responses of traits to different environmental gradients: species and community levels	74

4.5 Ecological strategies	81
4.6 Conclusions	87
4.7 Key points	87
4.8 References	88
5 A functional approach to plant community structure	94
5.1 Introduction	94
5.2 Community assembly rules and environmental filters	94
5.3 Characterizing the functional structure of a community	98
5.4 Factors controlling community functional structure	103
5.5 Conclusions	112
5.6 Key points	112
5.7 References	113
6 Plant traits and ecosystem properties	119
6.1 Introduction	119
6.2 Plant communities and ecosystem properties	119
6.3 Functional bases for trait-ecosystem properties relationships and the dominance hypothesis	121
6.4 The complementarity hypothesis	136
6.5 Testing simultaneously the dominance and complementarity hypotheses	138
6.6 Dominance and complementarity effects: too early for conclusions	144
6.7 A new perspective: ecosystem allometry	145
6.8 Conclusions	146
6.9 Key points	147
6.10 References	147
7 Functional diversity and ecosystem services	154
7.1 Introduction	154
7.2 Types of ecosystem services	155
7.3 A functional approach to services	156
7.4 The quantification of services	160
7.5 Conclusions	165
7.6 Key points	165
7.7 References	166
8 Functional diversity in agriculture: grasslands and crop weeds as case studies	169
8.1 Introduction	169
8.2 Managed permanent grasslands	170
8.3 Crop weeds	184
8.4 How do these examples help us develop innovative agricultural systems?	182
8.5 Conclusions	183
8.6 Key points	183
8.7 References	184

9 Managing functional diversity data	202
9.1 Introduction	202
9.2 Availability of trait data	202
9.3 Ecoinformatics and plant functional diversity	204
9.4 Conclusions	214
9.5 Key points	215
9.6 References	215
10 Perspectives for functional diversity research	219
10.1 Introduction	219
10.2 Basis and theory of the trait-based approach to diversity	219
10.3 Functional diversity and intraspecific variability	220
10.4 Traits, functioning of organisms, and environmental factors	221
10.5 Community functional structure, ecosystem properties, and services	222
10.6 Perspectives in the field of agriculture	222
10.7 Data management	223
10.8 Conclusions	224
10.9 Key points	224
10.10 References	225
Index	229
