Part I Overall Considerations

1. Diversity of Freshwater Ecosystems and Global Distributions 3

G. Randy Milton and C. Max Finlayson

1.1 Introduction	3
1.2 Distribution and extent	4
1.3 Freshwater hydrology	5
1.4 Freshwater ecosystem diversity	7
1.4.1 Rivers	7
1.4.2 Lakes and reservoirs	8
1.4.3 Marshes and swamps	9
1.4.4 Peatlands—mires	10
1.4.5 Freshwater karst systems	12
1.5 Summary statement	14
References	15

2. Approaches to Freshwater Ecology and Conservation 20

*Rebecca E. Tharme, David Tickner, Jocelyne M.R. Hughes, John Conallin,
and Lauren Zielinski*

2.1 Introduction	20
2.1.1 The situation—freshwater ecosystems, conservation status, and trends	20
2.1.2 The human factor in freshwater conservation and management	21
2.2 Framing freshwater conservation challenges	22
2.2.1 Scoping, objective setting, and guiding principles	22
2.2.2 Working with stakeholders from the inception	24
2.2.3 Sources of data, information, and knowledge	26
2.2.4 The importance of scale	27
2.3 Finding an approach appropriate for the context	28
2.3.1 Selecting from among the different types of approach	28
2.3.2 Illustrations of the diversity of approaches	30
2.3.3 Monitoring and evaluation, including a role for citizen science	32
2.4 Emerging approaches, sectors, and research arenas in freshwater ecology and conservation	35
2.4.1 Emerging technologies to collect ecological data at different scales	36

2.4.2 Private sector water stewardship as a growing area for ecosystem conservation	37
2.5 Concluding remarks	38
References	40
3. Sampling Strategies and Protocols for Freshwater Ecology and Conservation	48
<i>Leon A. Barmuta</i>	
3.1 Introduction	48
3.1.1 Objectives, research questions, developing and testing hypotheses	48
3.2 Sampling for ecology and sampling for conservation	50
3.2.1 Classes of sampling types	52
3.2.2 Logistic constraints	54
3.3 Habitat-centric strategies	55
3.4 Organism-centric strategies	56
3.5 Temporal considerations	58
3.6 Conclusion	58
References	58
 Part II Measuring the Component Parts	
4. Water Quantity and Hydrology	67
<i>Matthew McCartney</i>	
4.1 Introduction	67
4.2 Hydrological monitoring	68
4.2.1 Data collection	68
4.2.2 Monitoring networks	78
4.3 Data analyses	80
4.3.1 Residence time	80
4.3.2 Areal rainfall	80
4.3.3 Hydrological modelling	81
4.3.4 Environmental flows	81
4.4 Case study: hydrological assessment for wetland conservation at Wicken Fen	83
4.5 Conclusion	85
References	85
5. Chemical Determinands of Freshwater Ecosystem Functioning	89
<i>Nic Pacini, Libor Pechar, and David M. Harper</i>	
5.1 The influence of geology, morphology, climate, and land use	89

5.2 pH and dissolved oxygen	90
5.2.1 Acidity	90
5.2.2 pH measurement	91
5.2.3 Oxygen measurement	93
5.2.4 Significance of pH ranges	93
5.2.5 Acidity/alkalinity buffering	94
5.3 Inorganic carbon, major ions, and conductivity	95
5.3.1 Inorganic carbon	95
5.3.2 Carbon measurement	95
5.3.3 Major ions and conductivity	96
5.4 Organic carbon and nutrients	97
5.4.1 Organic carbon	97
5.4.2 Nutrients	98
5.5 Heavy metals and xenobiotic compounds	100
5.6 Chemical analysis	101
References	103

6. Physical Variables in Freshwater Ecosystems **106**

Curt Lamberth and Jocelyne M.R. Hughes

6.1 Introduction	106
6.2 Approaches to collecting physical variables	107
6.2.1 Habitat and sampling considerations	107
6.2.2 Battery considerations	107
6.3 Catchment setting	109
6.3.1 Bathymetry, topography, area, and length	109
6.3.2 Water depths and levels	110
6.3.3 Geology	112
6.4 In and near to the water	113
6.4.1 Temperature and humidity	113
6.4.2 Colour, clarity, turbidity, and suspended sediment	116
6.4.3 Solar radiation and PAR	117
6.4.4 Evaporation and evapotranspiration	118
6.5 Substrate	120
6.5.1 Sampling	120
6.5.2 Type of substrate and soil characterisation	121
6.5.3 Sedimentation, accretion, and erosion	123
6.5.4 Texture, particle size, porosity, penetrability, and soil moisture	123
6.6 Examples	124
References	126

7. Microorganisms 1: Phytoplankton, attached algae, and biofilms **133**

David C. Sigeo

7.1 Introduction	133
------------------	-----

7.2	Diversity of freshwater algae	134
7.2.1	Algal size	136
7.2.2	Taxonomy	136
7.3	Standing (lentic) and flowing (lotic) waters	136
7.3.1	The balance between planktonic and benthic algae	136
7.4	Phytoplankton sampling and assessment	137
7.4.1	Phytoplankton sampling	138
7.4.2	Phytoplankton assessment	140
7.4.3	Non-standard procedures for monitoring phytoplankton	142
7.5	Substratum-associated algae: from biofilm to benthic communities	144
7.5.1	Biofilms	144
7.5.2	Benthic algae	147
7.6	Assessment of eutrophication and control of nuisance algae in standing waters	148
7.6.1	Variation in natural systems	148
7.6.2	Effects of human activities	149
7.6.3	Monitoring environmental change	150
7.6.4	Practical measures to control eutrophication and the growth of nuisance algae	151
7.7	General overview	154
	References	154

8. Microorganisms 2: Viruses, prokaryotes, fungi, protozoans, and microscopic metazoans 157

Julia Reiss

8.1	Introduction	157
8.2	Biodiversity	158
8.2.1	Size ranges	158
8.2.2	Non-taxonomic groupings	159
8.2.3	Taxonomy—operational taxonomic units	160
8.2.4	Taxonomy—species identification via microscopy	160
8.3	Freshwater environments	162
8.4	Sampling and assessment	163
8.4.1	Sampling viruses and bacteria	163
8.4.2	Sampling protozoans, metazoans, and fungi	164
8.4.3	Conversions and calculations: population characteristics such as production	164
8.5	Bioindicators	165
8.6	Case studies	166
8.6.1	Ashdown Forest streams	166
8.6.2	Lake Constance	168

8.6.3 Římov reservoir	168
8.7 Conclusion	169
References	169
9. Wetland Plants and Aquatic Macrophytes	173
<i>Jocelyne M.R. Hughes, Beverley R. Clarkson, Ana T. Castro-Castellon, and Laura L. Hess</i>	
9.1 Introduction—Why survey vegetation in freshwaters?	173
9.2 Planning a survey	174
9.2.1 Approaches to freshwater plant surveys	174
9.2.2 Survey impacts on plants	175
9.3 Techniques and equipment specific to freshwater plant surveys	175
9.3.1 Equipment—grab and grapnel	176
9.3.2 Observation—bathyscope, snorkelling, and underwater camera	177
9.3.3 Detection—hydroacoustics and eDNA	177
9.4 Sampling strategies for freshwater plant surveys	178
9.4.1 Sampling approaches	178
9.4.2 Plot shape and size	179
9.4.3 Sample size	180
9.5 Survey methods and approaches used in freshwater plant ecology and conservation	182
9.5.1 Field surveys	182
9.5.2 Experimental approaches	187
9.5.3 Remote sensing approaches	190
9.6 Remote sensing methods	190
9.6.1 Sensor types and platforms	190
9.6.2 Steps in carrying out a remote sensing study	195
9.7 What questions can these methods answer?	197
9.7.1 <i>Sphagnum</i> bog	197
9.7.2 Restiad bog	197
9.7.3 Fen	198
9.7.4 Sub-tropical river floodplain	198
9.7.5 Biomass estimation	198
9.7.6 Wetland delineation	199
9.7.7 Mapping aquatic vegetation	199
9.7.8 Mapping riparian vegetation	200
9.7.9 National and regional wetland inventories	200
9.7.10 Monitoring	200
9.7.11 Experimental meso- and macrocosms	201
9.7.12 Floodplain forest structure and inundation period	201
References	202

10. Freshwater Vertebrates: An overview of survey design and key methodological considerations	208
<i>Stephen E.W. Green, Rosie D. Salazar, Gillian Gilbert, Andrew S. Buxton, Danielle L. Gilroy, Thierry Oberdorff, and Lauren A. Harrington</i>	
10.1 Introduction	208
10.1.1 Diversity of freshwater vertebrates	208
10.1.2 Why survey freshwater vertebrates?	208
10.1.3 Threats facing freshwater vertebrates	209
10.1.4 Aim and structure of this chapter	210
10.2 Setting clear aims and objectives	210
10.3 Direct visual and audio encounter surveys	212
10.3.1 Amazonian river surveys in Peru	213
10.3.2 Acoustic surveys of bittern booms	216
10.4 Indirect detection surveys	218
10.4.1 Sign surveys	218
10.4.2 Freshwater species detection using environmental DNA	219
10.5 Capture methods	221
10.5.1 Amphibians	221
10.5.2 Snakes	222
10.5.3 Freshwater turtles	222
10.5.4 Crocodilians	223
10.5.5 Fish	223
10.5.6 Mammals	223
10.5.7 Birds	224
10.6 Individual recognition and marking techniques	225
10.6.1 Photo identification	225
10.6.2 Marking method considerations	225
10.6.3 Marking fish	226
10.6.4 Marking amphibians and reptiles	227
10.6.5 Marking mammals	227
10.6.6 Marking birds	228
10.7 Genetic studies of freshwater vertebrates	229
10.7.1 Applications	229
10.7.2 Monitoring chytrid prevalence in Cusuco National Park, Honduras	230
10.8 Dietary studies of freshwater vertebrates	231
10.9 Biosecurity	232
10.10 Concluding remarks	232
References	232
11. Aquatic Macroinvertebrates	240
<i>Richard Marchant and Catherine M. Yule</i>	
11.1 Introduction	240
11.2 General considerations	240

11.3	Field sampling techniques	241
11.3.1	Qualitative methods	242
11.3.2	Quantitative methods	244
11.3.3	Removal sampling	246
11.4	Laboratory processing of samples	248
11.4.1	Flotation	248
11.4.2	Subsampling	248
11.4.3	Extraction of specimens	250
11.5	Some analytical considerations of data from invertebrate samples	250
	References	251

Part III Ecosystem Dynamics, Conservation, and Management

12. Freshwater Populations, Interactions, and Networks 257

David M. Harper and Nic Pacini

12.1	Introduction	257
12.2	Species and populations	258
12.2.1	Population sizes, ranges, distributions, and dynamics	258
12.2.2	Measuring life-cycle fluctuations and life-history patterns	261
12.2.3	Population–environment associations, functional feeding groups, and stressors in aquatic habitats	262
12.3	Communities and ecosystems	264
12.3.1	Species richness, diversity, rarity, and eDNA	264
12.3.2	Food chains and webs	270
12.3.3	Energy flows—quantifying food webs in lakes, streams, wetlands	271
12.4	Landscape freshwater ecology	272
	References	274

13. Changes Over Time 283

Peter A. Gell, Marie-Elodie Perga, and C. Max Finlayson

13.1	Introduction	283
13.2	Change in freshwater systems	284
13.2.1	Cyclical change and variability	284
13.2.2	Accounting for variability to understand change	286
13.2.3	Understanding directional change	288
13.3	Long-term ecological change	289
13.4	Detecting ecological response to disturbance	292
13.4.1	Limnological response over time	292
13.4.2	Ecosystem recovery	293
13.4.3	Regime shifts	293

13.5	Recent anthropogenic change	294
13.6	Understanding change for managing freshwater systems	295
13.6.1	Understanding change in Ramsar wetlands	296
13.6.2	The novel ecosystem	297
13.7	Final remarks	299
	References	299
14.	Secondary Data: Taking advantage of existing data and improving data availability for supporting freshwater ecology research and biodiversity conservation	306
	<i>Aaike De Wever, Astrid Schmidt-Kloiber, Vanessa Bremerich, and Joerg Freyhof</i>	
14.1	Introduction	306
14.2	Importance of secondary data	307
14.3	Open data in environmental sciences	310
14.3.1	Metadata	310
14.3.2	Open data, licences, and the '5-stars of Open Data'	310
14.3.3	FAIR data	311
14.3.4	Data repositories and (community) standards	311
14.3.5	Data papers and the role of journal publishers	311
14.3.6	Citizen science and crowdsourcing	312
14.4	Obtaining data relevant to freshwater ecology and conservation	312
14.4.1	Types of data	312
14.4.2	Freshwater relevant taxonomic data	313
14.4.3	Molecular and genetic data	314
14.4.4	Observation and distribution data	314
14.4.5	Other information sources for data retrieval	315
14.5	Understanding secondary data	317
	References	319
15.	Freshwater Ecosystem Services and Functions	321
	<i>C. Max Finlayson, Rudolph S. de Groot, Francine M.R. Hughes, and Caroline A. Sullivan</i>	
15.1	Introduction	321
15.2	Measuring ecosystem services and functions	323
15.2.1	Background	323
15.2.2	Function analysis: inventory of wetland services	323
15.2.3	Identification and selection of wetland services	324
15.2.4	Quantification of the capacity of wetlands to provide ecosystem services on a sustainable basis	324
15.2.5	Valuing wetland ecosystem services	325
15.3	Approaches and toolkits for measuring ecosystem services	327
15.4	Awareness of ecosystem services	332
15.4.1	Richmond catchment, Australia	332

15.4.2 Colombian wetland ecosystem service assessment	333
Acknowledgements	334

16. Invasive Aquatic Species 338

*Julie A. Coetzee, Martin P. Hill, Andreas Hussner, Ana L. Nunes,
and Olaf L.F. Weyl*

16.1 Introduction	338
16.2 Fish	339
16.2.1 Introduction	339
16.2.2 Impacts	340
16.2.3 Control	341
16.3 Invertebrates	341
16.3.1 Introduction	341
16.3.2 Impacts	343
16.3.3 Control	344
16.4 Floating aquatic macrophytes	345
16.4.1 Introduction	345
16.4.2 Impacts	346
16.4.3 Control	346
16.5 Submerged aquatic macrophytes	349
16.5.1 Introduction	349
16.5.2 Impacts	350
16.5.3 Control	350
16.6 Discussion	351
References	355

17. Freshwater Ecosystem Security and Climate Change 359

Jamie Pittock, C. Max Finlayson, and Simon Linke

17.1 Introduction	359
17.2 Modelling impacts of climate change on freshwater ecosystems	360
17.2.1 Introduction to modelling	360
17.2.2 Models for climate, hydrology, species distribution, and prioritisation	361
17.2.3 A values-based approach to selecting conservation options	364
17.3 Different approaches for managing risks to freshwater ecosystems and resources	365
17.4 Climate change adaptation for freshwater ecosystems	367
17.5 Managing the impacts of climate change responses in other sectors on freshwater ecosystems	369
17.6 Conclusion	371
References	372

18. Restoration of Freshwaters: Principles and practice	378
<i>Carl Sayer, Helen Bennion, Angela Gurnell, Emma Goodyer, Donovan Kotze, and Richard Lindsay</i>	
18.1 Introduction	378
18.2 Restoration targets	379
18.3 Diagnosing and tackling the problem	384
18.4 Good restoration encourages the natural repair of degraded systems	387
18.5 Recognise the importance of landscape-scale influences and processes	393
18.6 Importance of monitoring restoration	395
18.7 Working with stakeholders	396
18.8 Conclusions	397
References	398
 19. Wetland Landscapes and Catchment Management	 404
<i>Caroline A. Sullivan, C. Max Finlayson, Elizabeth Heagney, Marie-Chantale Pelletier, Mike C. Acreman, and Jocelyne M.R. Hughes</i>	
19.1 Evolving world views	404
19.2 Freshwater governance	405
19.2.1 Challenges of management at the catchment scale	406
19.2.2 Beyond the catchment—challenges in transboundary basins	407
19.3 Ecosystem services	408
19.3.1 Benefits from ecosystem services	408
19.3.2 Disbenefits and trade-offs of wetland services	409
19.4 Valuing wetlands	410
19.5 Tools and techniques for conserving wetland landscapes	411
19.5.1 Market-based instruments for water and wetlands	411
19.5.2 Payment for ecosystem services	411
19.5.3 Biodiversity (and ecosystem service) offsetting	411
19.5.4 Water-quality trading schemes	412
19.5.5 How wetland values can be used to support regional development	413
19.6 Wetland law and policy	414
19.7 Challenges and solutions in urban wetlands	415
19.8 The urgency of inaction	416
19.8.1 Reversing the decline	416
19.9 Concluding remarks	416
Acknowledgements	417
References	417
