Section 1 Evolutionary Origins and Transitions in Developmental Mode	1
1 Origin and Diversity of Marine Larvae	3
Claus Nielsen	
1.1 Introduction—Defining a Larva	3
1.2 Origin of Larvae	6
1.3 Variation in Larval Types	7
1.4 An Overview of the Diversity of Marine Larvae	8
1.4.1 Spiralia (Lophotrochozoa)	9
1.4.2 Ecdysozoa	10
1.4.3 Ambulacraria	10
1.4.4 Chordata	13
1.5 Summary	13
References	13
2 Evolutionary Development of Marine Larvae	16
Heather Marlow	
2.1 Introduction	16
2.2 Homologous Larval Features	17
2.3 History of the Debate for Ancestrality of Larval and Adult Forms	18
2.4 Molecular Approaches to Comparing Larval Features	18
2.5 Distinguishing Larval Features and Adult Features: Body Plan and Innovations in Gene Regulation	20
2.6 Comparison of Cell Types	22
2.7 Comparison of Global Transcriptional Signals—Assessing Homology of Ontogenetic Process	23
2.8 Developmental Networks and the Modularity of Gene Expression: Integrating Global and Cell-Type Specific Transcriptional Programs	24
2.9 A Case Study in Heterochrony: Modularity Gives Rise to Heterochronic Shifts in Feeding Structures	26
2.10 Pelago-benthic Metamorphosis is an Ancestral Metazoan Feature	27
2.11 Summary	29
References	29

3 Evolutionary Ecology of Parental Investment and Larval Diversity	34
Dustin Marshall, Justin S. McAlister, and Adam M. Reitzel	
3.1 Introduction	34
3.2 The Biogeography of Parental Investment in the Sea	35
3.3 Theory of Parental Investment in Marine Organisms	36
3.4 Parental Investment, Egg Size, and the Size-Number Trade-Off	37
3.4.1 Does Offspring Size Reflect Energy Content?	38
3.4.2 Does Energy Content or Size Reflect Total Per-Offspring Investment?	39
3.4.3 Does Energy Content Reflect the Proximal Constraints on Maternal Investment?	39
3.5 Offspring Size-Fitness Functions	39
3.5.1 Offspring Size and Fertilization Success	40
3.5.2 Offspring Size and the Planktonic Period	40
3.5.3 Offspring Size Effects on Post-metamorphic Performance	41
3.6 Eco-evolutionary Dynamics of Parental Investment	43
3.6.1 Ecological Importance of Offspring Size	43
3.6.2 Drivers of Among-Environment Variation in Offspring Size	43
3.6.3 Environmental Dependent Variation in Offspring Quality Other than Size	44
3.6.4 Within-Brood Variation	45
3.7 Future Directions	45
3.8 Summary	46
Acknowledgments	47
References	47
4 Evolutionary Transitions in Mode of Development	50
Rachel Collin and Amy Moran	
4.1 Introduction	50
4.2 The Analytical Approach	51
4.3 Limitations of the Long View	54
4.4 Future Directions and Unanswered Questions for Analytical Approaches	56
4.5 A Closer View	58
4.6 Summary	62
Acknowledgments	63
References	63
5 Asexual Reproduction of Marine Invertebrate Embryos and Larvae	67
Jonathan D. Allen, Adam M. Reitzel, and William Jaeckle	
5.1 Introduction	67
5.2 Types of Asexual Reproduction of and by Embryos and Larvae	68
5.2.1 Embryo	68
5.2.2 Larva	68
5.3 Asexual Reproduction by Feeding Larvae of Echinoderms	69
5.3.1 Class-level Distribution of Larval Cloning in Echinoderms	69
5.4 Modes of Asexual Reproduction in Echinoderms	69
5.4.1 Asexual Reproduction by Budding	69
5.4.2 Asexual Reproduction by Paratomy	70
5.4.3 Asexual Reproduction by Autotomy	71

5.5 Induction of Asexual Reproduction	72
5.5.1 Abiotic	72
5.5.2 Biotic	73
5.6 Other Taxa	74
5.7 Is Larval Cloning Adaptive?	74
5.8 Open Questions for Future Research	76
5.9 Summary	78
Acknowledgment	78
References	78
6 Section 1 Summary—Evolutionary Origins and Transitions in Developmental Mode	82
Section 2 Functional Morphology and Ecology of Larval Forms	85
7 Larval Feeding: Mechanisms, Rates, and Performance in Nature	87
Bruno Pernet	
7.1 Introduction	87
7.2 How Do Marine Invertebrate Larvae Feed?	88
7.2.1 The Limited Palette of Physical Processes of Particle Encounter and Capture	88
7.2.2 The Diverse Array of Larval Forms and Feeding Mechanisms	89
7.3 Predicting Larval Feeding Performance from Form and Feeding Mechanism	94
7.3.1 Predicting Maximum Clearance Rate	95
7.3.2 Predicting the Size Spectrum of Catchable Particles	96
7.4 Inferences on Larval Feeding Performance in Nature	98
7.5 Summary	99
Acknowledgments	99
References	99
8 Phenotypic Plasticity of Feeding Structures in Marine Invertebrate Larvae	103
Justin S. McAlister and Benjamin G. Miner	
8.1 Phenotypic Plasticity	103
8.2 Feeding Larvae of Marine Invertebrates	105
8.3 Plasticity of Feeding Structures in Planktotrophic Larvae	106
8.3.1 Food Limitation, Resource Acquisition, and Energetic Trade-offs	106
8.3.2 Patterns of Expression and Environmental Cues	111
8.3.3 Developmental Mechanisms of Feeding-Structure Plasticity	114
8.3.4 Experimental Designs and Analyses	116
8.4 Summary	118
Acknowledgments	119
References	119
9 Physiology of Larval Feeding	124
William Jaekle	
9.1 Introduction	124
9.2 Physiology of Invertebrate Larvae: The Challenge	124

9.3 Acquisition of Materials	125
9.4 Material Movement	126
9.5 Ventilation of the Digestive System	127
9.6 Digestion and Absorption	129
9.7 Extraction Efficiency	130
9.8 Internal Transport Systems	131
9.9 Alternative Sources of Organic Materials—Dissolved Organic Materials	133
9.10 An Example of Physiological Responses to Environmental Change—Ocean Acidification	135
9.11 Summary	136
Acknowledgments	136
References	136

10 Section 2 Summary—Functional Morphology and Ecology of Larval Forms 142

Section 3 Larval Transport, Settlement, and Metamorphosis 143

11 Larval Transport in the Coastal Zone: Biological and Physical Processes 145

Jesús Pineda and Nathalie Reyns

11.1 Introduction	145
11.2 Scales of Larval Transport	146
11.3 Components of Larval Transport and Other Relevant Phenomena	147
11.3.1 Larval Behavior	147
11.3.2 Physical Transport Mechanisms and Hydrodynamic Variability	148
11.4 Advective Physical Mechanisms in the Coastal Ocean Associated with Larval Transport	149
11.5 Other First-order Phenomena and Processes Relevant to Larval Transport	151
11.5.1 Swimming Proficiency and Size	151
11.5.2 Larval Duration	151
11.5.3 Accumulation	151
11.5.4 Patchiness and Episodic Transport	153
11.5.5 Spatial Variability in Larval Abundance	153
11.6 Challenges and Recent Approaches to Understanding and Measuring Larval Transport	153
11.6.1 Challenges	153
11.6.2 Recent Approaches	155
11.7 Conclusion and Next Steps	158
11.8 Summary	158
Acknowledgments	159
References	159

12 Genetic Analysis of Larval Dispersal, Gene Flow, and Connectivity 164

Peter B. Marko and Michael W. Hart

12.1 Introduction	164
12.2 Genetic Approaches to the Study of Larval Dispersal	165

12.3	How to Estimate Larval Dispersal from Genetics	166
12.3.1	Population-Based Methods	166
12.3.2	Individual-Based Methods	170
12.4	Improved Understanding of Larval Dispersal and Gene Flow	173
12.4.1	Biological Correlates of Larval Dispersal: Planktonic Larval Duration	173
12.4.2	Estimates of Dispersal Distances	176
12.5	Consequences of Larval Dispersal: Genetic Connectivity vs. Demographic Connectivity	180
12.6	Conclusion	182
12.7	Summary	182
	Acknowledgments	183
	References	183
13	I Feel That! Fluid Dynamics and Sensory Aspects of Larval Settlement Across Scales	190
	Jason Hodin, Matthew C. Ferner, Andreas Heyland, and Brian Gaylord	
13.1	Introduction	190
13.2	What Does It Feel Like to be a Larva?	191
13.2.1	What Can a Larva Sense in Its Fluid Environment and How Does It Do So?	194
13.3	How Larvae Find Their Way Home: Scales of Flow and Larval Behavior	199
13.3.1	The Macro Scale: ~1–100 Kilometers	200
13.3.2	The Meso Scale: < 0.1–1 Kilometers	201
13.3.3	The Local Scale: 10s of Centimeters–10s of Meters	202
13.3.4	The Larval Scale: < 1 Millimeter–a Few Centimeters	202
13.4	Conclusion	203
13.5	Summary	204
	Acknowledgments	204
	References	204
14	Latent Effects: Surprising Consequences of Embryonic and Larval Experience on Life after Metamorphosis	208
	Jan A. Pechenik	
14.1	Introduction and Definitions	208
14.2	Latent Effects of Exposure to Toxicants	210
14.3	Latent Effects Following Hypoxia	211
14.4	Latent Effects from Food and Nutrient Limitation	212
14.5	Latent Impact of Salinity Stress	213
14.6	Latent Effects of Delayed Metamorphosis	214
14.7	Latent Effects of Ocean Acidification	215
14.8	Latent Impact of Thermal Stress	215
14.9	Caution in Interpreting Latent Effects	216
14.10	Consequences of Larval Stress are Not Always Negative	216
14.11	Mechanisms Accounting for Latent Effects	217
14.12	Impact and Implications	219
14.13	Summary	220
	Acknowledgments	221
	References	221

15 Section 3 Summary—Larval Transport, Settlement, and Metamorphosis 226

Section 4 Larval Ecology at the Extremes 227

16 Ecology and Evolution of Larval Dispersal in the Deep Sea 229

Craig M. Young, Shawn M. Arellano, Jean-François Hamel, and Annie Mercier

- 16.1 Introduction 229
- 16.2 Why Deep-Sea Dispersal Matters 229
- 16.3 Is Dispersal Advantageous to Deep-Sea Species? 230
- 16.4 How Common is Brooding in the Deep Sea? 232
- 16.5 Do Deep-Sea Larvae Demonstrate Distinctive Developmental Strategies that Either Enhance or Reduce Dispersal Distance? 233
 - 16.5.1 Increasing Dispersal Through Parental Investment 233
 - 16.5.2 Increasing Dispersal Through Arrested Development 234
 - 16.5.3 Controlling Dispersal Depth with Egg Density 234
 - 16.5.4 Increasing Dispersal through Slow Development and Long Planktonic Larval Durations 235
 - 16.5.5 Does Release from Predation Permit Long Dispersal Times in the Deep Sea? 237
- 16.6 Ontogenetic Vertical Migration and Its Evolutionary Significance 238
 - 16.6.1 Ontogenetic Vertical Migration May Be a Phylogenetically Constrained Character 240
 - 16.6.2 Planktotrophic Larvae of Deep-Sea Animals May Require Migration to Reach Productive Surface Waters 240
 - 16.6.3 Ontogenetic Vertical Migrations Impact Biogeography by Mediating Transport or Retention of Larvae 242
 - 16.6.4 Demersal Drift May Either Retain Larvae or Increase Encounter Rates for Isolated Substrata 243
- 16.7 Summary 244
- References 245

17 Larval Ecology in the Face of Changing Climate—Impacts of Ocean Warming and Ocean Acidification 251

Maria Byrne, Pauline M. Ross, Symon A. Dworjanyn, and Laura Parker

- 17.1 Introduction 251
- 17.2 Global Warming—Larvae on the Move 253
- 17.3 Ocean Acidification—Multiple Drivers 256
- 17.4 Multistressor Effects—Interactive Effects of Ocean Warming and Acidification on Larvae 262
- 17.5 Adaptation and Acclimation of Marine Larval Stages in a Changing Climate 263
- 17.6 Conclusion 264
- 17.7 Summary 265
- Acknowledgments 265
- References 265

18 Ecotoxicology in Marine Environments: The Protective Role of ABC Transporters in Sea Urchin Embryos and Larvae	273
Ilaria Corsi and Luis Fernando Marques-Santos	
18.1 Introduction	273
18.2 Sea Urchin Development	274
18.3 ABC Transporters: Brief History and General Overview	277
18.4 ABC Transporters in Sea Urchin Embryos and Larvae	279
18.5 ABC Transporters, Echinoderms, and Ecotoxicology	281
18.6 ABC Transporters and Bioassays	283
18.7 Current Knowledge and Future Gaps	284
18.8 Summary	285
References	285
19 An -Omics Perspective on Marine Invertebrate Larvae	288
Elizabeth A. Williams and Tyler J. Carrier	
19.1 Introduction	288
19.2 Role of -Omics Approaches in Deciphering Molecular Mechanisms of Larval Development and Life History Evolution	291
19.3 -Omics Approaches for Measuring Larval Response to Environmental Change and Challenges	293
19.4 Marine Invertebrate Larvae and Their Microbiome	294
19.5 -Omics Approaches to Further Understanding of Larval Physiology: Growth, Feeding, and Nutrition	296
19.6 Connectomics: An -Omics Approach to Shed Light on Larval Behavior	297
19.7 A Future Perspective	299
19.8 Summary	300
Acknowledgments	301
References	301
20 Section 4 Summary—Larval Ecology at the Extremes	305
21 Marine Invertebrate Larvae: Model Life Histories for Development, Ecology, and Evolution	306
Alan C. Love and Richard R. Strathmann	
21.1 Introduction	306
21.2 Model Life Histories	307
21.3 Evolution: Diversity, Origins, and Adaptation	310
21.4 Ecology: Dispersal, Feeding, and Metamorphosis	313
21.5 Emerging Issues: Environmental Hazards and Extreme Environments	316
21.6 Summary	318
Acknowledgments	318
References	319
