1 Why am I reading this book?	1
Book and Chapter Aims	1
1.1 My lecturer is a sadist!	1
1.2 Doing science: the big picture	3
1.2.1 Descriptive questions	3
1.2.2 Questions answered using a research hypothesis	4
Stage 1: developing research hypotheses	4
Stage 2: generating predictions	5
Stage 3: testing predictions	6
1.3 The process in practice	6
1.4 Essential skills for doing science	7
Analysing data	7
Developing hypotheses and predictions	7
Experimental design	8
Taking measurements	8
Critical evaluation	8
Health, safety, and ethical assessment	9
1.5 Types of data analysis	9
Checklist of key points	10
Self-help questions	11
2 Getting to grips with the basics	12
Chapter Aims	12
2.1 Populations and samples	12
2.1.1 The sampling process	13
Sample size	14
Replication and pseudoreplication	14
Random sampling and bias	15
2.1.2 Sample error	15
2.2 Variation and variables	17
2.2.1 Identifying variables	18
2.2.2 Dependent and independent variables	18
2.2.3 Relationships and differences	19
2.2.4 Manipulated versus natural variation in independent variables	20
2.2.5 Lack of independence between variables	21

2.3 Understanding data	21
2.3.1 Differences: related and unrelated data	22
2.3.2 Levels of measurement	24
Nominal (categories)	24
Ordinal (ranks)	24
Scale (counts and measures)	25
2.4 Demystifying formulae	26
2.4.1 Squiggles, lines, and letters	26
2.4.2 Doing things in order	27
Checklist of key points	28
Self-help questions	29
3 Describing a single sample	30
Chapter Aims	30
3.1 The single sample	30
3.2 Descriptive statistics	31
3.2.1 Central tendency	31
Mean ($\bar{y}$)	31
Median	32
Mode	33
3.2.2 Variability	33
Range	33
Interquartile range	34
Variance (s^2)	34
Standard deviation (s)	37
3.3 Frequency distributions	37
3.3.1 For nominal, ordinal, and discrete scale data	38
3.3.2 For continuous scale data	39
3.4 The normal, and other, theoretical distributions	41
3.4.1 Characteristics of the normal distribution	42
3.4.2 Other distributions: binomial and Poisson	43
3.5 Pies, boxes, and errors	43
3.5.1 Pie charts as alternatives to frequency-distribution charts	43
3.5.2 Understanding boxplots	44
3.5.3 Introducing error bars	44
3.6 Example data: ranger patrol tusk records	46
3.7 Worked example: using SPSS	47
3.7.1 Descriptive statistics and frequency distributions	47
For nominal, ordinal, and discrete scale data	48
For continuous scale data	49
3.7.2 Pie charts	53
3.7.3 Boxplots	55
Checklist of key points	57
Self-help questions	58

4	Inferring and estimating	59
	Chapter Aims	59
4.1	Overview of inferential statistics	59
4.1.1	Why we need inferential statistics—a reminder	59
4.1.2	Uncertainty and probability	60
4.2	Inferring through estimation	61
4.2.1	Standard error (of the mean, $S_{\bar{y}}$)	62
4.2.2	Confidence intervals (of the mean)	63
4.2.3	Error bars revisited	64
4.2.4	Comparing samples	65
4.3	Example data: ground squirrels	66
4.4	Worked example: using SPSS	67
4.4.2	Errorplots	68
	Checklist of key points	71
	Self-help questions	72
5	Choosing the right test and graph	73
	Chapter Aims	73
5.1	Using graphs	74
5.2	NHST and other options	76
5.3	Which NHST?	78
5.3.1	Tests of frequencies	79
5.3.2	Tests of relationship	80
5.3.3	Tests of difference	80
5.4	Worked examples: graphs with two variables using SPSS	81
5.4.1	Frequency distributions	82
5.4.2	Pie charts	83
5.4.3	Scatterplots	85
5.4.4	Boxplots	86
	Related samples	87
	Unrelated samples	88
5.4.5	Errorplots	90
	Related samples	90
	Unrelated samples	91
	Checklist of key points	93
	Self-help questions	93
6	Overview of null hypothesis significance testing	95
	Chapter Aims	95
6.1	Four steps of null hypothesis significance testing	95
6.1.1	Step 1: construct a (statistical) null hypothesis (H_0)	96
6.1.2	Step 2: decide on a critical significance level (α)	97
6.1.3	Step 3: calculate your statistic	97
6.1.4	Step 4: reject or accept the null hypothesis	98

Step 4: Using critical value tables	98
Step 4: Using <i>P</i> values on computer output	98
6.2 Parametric and nonparametric	100
6.2.1 Comparison of parametric and nonparametric	100
6.2.2 Checking criteria for parametric tests using the normal distribution	101
6.2.3 Choosing between parametric and nonparametric	101
6.2.4 Transformation	102
6.3 One- and two-tailed tests	102
6.4 Effect sizes and their confidence intervals	103
6.4.1 Uses of effect size	103
6.4.2 Ways of measuring effect size	104
6.5 Error and power	105
6.5.1 Type I and type II error	105
6.5.2 Statistical power	106
6.5.3 Power analyses: <i>a priori</i> and <i>post hoc</i>	106
6.5.4 Implications for interpreting your results	107
6.6 Criticism of NHST	108
<i>Checklist of key points</i>	109
<i>Self-help questions</i>	110
7 Tests on frequencies	111
Chapter Aims	111
Notes on symbols	111
7.1 Introduction to chi-square tests	111
7.1.1 Only use frequency data	112
7.1.2 Types of chi-square test	112
7.1.3 Sample size considerations	114
7.1.4 When to use chi-square with caution	114
7.1.5 Alternatives to chi-square tests	115
7.2 Example data	116
7.2.1 One-way: Mendel's peas	116
7.2.2 Two-way: Mikumi's elephants	117
7.3 One-way chi-square test	119
7.3.1 When to use	119
7.3.2 Four steps	120
Using critical value tables	120
Using <i>P</i> values on computer output	120
7.3.3 Worked example: by hand	121
With expected according to a 1:1:1:1 Mendelian ratio (test of homogeneity)	121
With expected according to a 9:3:3:1 Mendelian ratio	122
7.3.4 Worked example: using SPSS	123
With expected according to a 1:1:1:1 Mendelian ratio (test of homogeneity)	125
With expected according to a 9:3:3:1 Mendelian ratio	127
7.3.5 Literature link: weary lettuces	129

7.4 Two-way chi-square test	130
7.4.1 When to use	130
7.4.2 Four steps	131
Using critical value tables	132
Using P values on computer output	132
7.4.3 Worked example: by hand	132
7.4.4 Worked example: using SPSS	134
7.4.5 Literature link: treatment alliance	137
Checklist of key points	140
Self-help questions	141
8 Tests of difference: two unrelated samples	143
Chapter Aims	143
8.1 Introduction to the t- and Mann-Whitney U tests	143
8.1.1 Variables and levels of measurement needed	143
8.1.2 Comparison of t- and Mann-Whitney U tests	144
8.1.3 The t-test and the parametric criteria	144
8.1.4 Sample size considerations	145
8.1.5 Alternatives to t- and Mann-Whitney U tests	146
8.2 Example data: dem-bones	146
8.3 t-Test	148
8.3.1 When to use	148
8.3.2 Four steps of a t-test	149
Using critical value tables	149
Using P values on computer output	150
8.3.3 Worked example: by hand	150
8.3.4 Worked example: using SPSS	152
8.3.5 Literature link: silicon and sorghum	154
8.4 Mann-Whitney U test	155
8.4.1 When to use	155
8.4.2 Four steps of a Mann-Whitney U test	156
Using critical value tables	156
Using P values on computer output	157
8.4.3 Worked example: by hand	157
8.4.4 Worked example: using SPSS	158
8.4.5 Literature link: Alzheimer's disease	162
Checklist of key points	163
Self-help questions	164
9 Tests of difference: two related samples	166
Chapter Aims	166
9.1 Introduction to paired t- and Wilcoxon signed-rank tests	166
9.1.1 Variables and levels of measurement needed	167
9.1.2 Comparison of paired t- and Wilcoxon signed-rank tests	167
9.1.3 The paired t-test and the parametric criteria	168

9.1.4	Sample size considerations	168
9.1.5	Alternatives to and extensions of the paired <i>t</i> - and Wilcoxon signed-rank tests	169
9.2	Example data: bighorn ewes	169
9.3	Paired <i>t</i> -test	172
9.3.1	When to use	172
9.3.2	Four steps of a paired <i>t</i> -test	172
	Using critical value tables	173
	Using <i>P</i> values on computer output	173
9.3.3	Worked example: by hand	173
9.3.4	Worked example: using SPSS	176
9.3.5	Literature link: slug slime	177
9.4	Wilcoxon signed-rank test	179
9.4.1	When to use	179
9.4.2	Four steps of a Wilcoxon signed-rank test	180
	Using critical value tables	181
	Using <i>P</i> values on computer output	181
9.4.3	Worked example: by hand	182
9.4.4	Worked example: using SPSS	183
9.4.5	Literature link: head injuries	185
	Checklist of key points	187
	Self-help questions	187
10	Tests of difference: more than two samples	189
	Chapter Aims	189
10.1	Introduction to one-way and Kruskal–Wallis tests	189
10.1.1	Variables and levels of measurement needed	190
10.1.2	Comparison of one-way and Kruskal–Wallis tests	191
10.1.3	One-way Anova and the parametric criteria	191
10.1.4	Sample size considerations	192
10.1.5	Alternatives to and extensions of one-way and Kruskal–Wallis tests	193
10.1.6	The language of Anova	193
10.1.7	Multiple comparisons	194
10.2	Example data: nitrogen levels in reeds	194
10.3	One-way Anova test	196
10.3.1	When to use	197
10.3.2	Four steps of a one-way Anova	197
	Using critical value tables	199
	Using <i>P</i> values on computer output	199
10.3.3	Worked example: using SPSS	199
10.3.4	Literature link: running rats	201
10.4	Kruskal–Wallis test	202
10.4.1	When to use	203
10.4.2	Four steps of a Kruskal–Wallis test	203
	Using critical value tables	204
	Using <i>P</i> values on computer output	204

10.4.3	Worked example: using SPSS	205
10.4.4	Literature link: cooperating long-tailed tits	207
10.5	Model I and model II Anova	208
	<i>Checklist of key points</i>	208
	<i>Self-help questions</i>	209
11	Tests of relationship: regression	211
	Chapter Aims	211
11.1	Introduction to bivariate linear regression	211
11.1.1	Variables and levels of measurement needed	212
11.1.2	Linear model: scary—not!	213
11.1.3	The three regression questions	214
11.1.4	Added extras: how much is explained, and prediction	214
11.1.5	Regression and the parametric criteria	215
11.1.6	Sample size considerations	216
11.1.7	Alternatives to and extensions of bivariate linear regression and Anova	216
11.2	Example data: species richness	217
11.3	Regression test	218
11.3.1	When to use	219
11.3.2	Four steps of a regression test	219
	Using critical value tables	220
	Using P values on computer output	220
11.3.3	Worked example: using SPSS for a regression test	221
11.3.4	Worked example: using SPSS to get the added extras	223
11.3.5	Reporting bivariate linear regression results	225
11.3.6	Literature link: nodules	226
11.4	Model I and model II regression	227
	<i>Checklist of key points</i>	228
	<i>Self-help questions</i>	229
12	Tests of relationship: correlation	231
	Chapter Aims	231
12.1	Introduction to the Pearson and Spearman correlation tests	231
12.1.1	Variables and levels of measurement needed	232
12.1.2	Comparison of Pearson's and Spearman's tests	234
12.1.3	Pearson and the parametric criteria	235
12.1.4	Sample size considerations	235
12.1.5	The correlation coefficient	236
12.1.6	Partial, multiple, and multivariate correlation	236
12.2	Example data: eyeballs	237
12.3	Pearson correlation test	238
12.3.1	When to use	238
12.3.2	Four steps of a Pearson correlation test	240
	Using critical value tables	241

12.3.2	Using P values on computer output	241
12.3.3	Worked example: using SPSS	241
12.3.4	Literature link: male sacrifice	243
12.4	Spearman correlation test	244
12.4.1	When to use	245
12.4.2	Four steps of a Spearman correlation test	245
	Using critical value tables	246
	Using P values on computer output	246
12.4.3	Worked example: using SPSS	246
12.4.4	Literature link: defoliating ryegrass	248
12.5	Comparison of correlation and regression	249
	Checklist of key points	250
	Self-help questions	251
13	Introducing the generalized linear model: general linear model	253
	Chapter Aims	253
	Notes on terminology	253
13.1	Introduction to the general linear model	254
13.1.1	Variables and levels of measurement	255
13.1.2	The linear model revisited	256
13.1.3	The language of GLMs	259
13.1.4	Questions and extras	259
13.1.5	Types of sums of squares	260
13.1.6	Model assumptions and the parametric criteria	261
	Normality of error	261
	Homogeneity of variance	261
	Linearity	261
13.2	Example data: watered willows	263
13.3	General linear model	265
13.3.1	When to use	265
13.3.2	GLM and the four steps	266
13.3.3	Worked example: using SPSS	267
	Looking at the model overall (answering question 2a, Section 13.1.4)	267
	Looking at individual explanatory variables (answering question 2b, Section 13.1.4)	269
	Looking at R^2 (answering question 3, Section 13.1.4)	271
	Using coefficients (answering question 1, Section 13.1.4)	272
	Using coefficients (making predictions)	274
	Checking model assumptions	274
13.3.4	Reporting results from GLM	275
13.3.5	Literature link: brains and booze	278
13.4	Interaction	279
13.4.1	Worked example: using SPSS, interaction	281

13.5 Random factors and mixed models	282
13.6 The multiple-model approach	283
13.6.1 Finding the best model	284
13.6.2 Reporting results from multiple models	284
13.7 The general and generalized linear models compared	285
Checklist of key points	285
Self-help questions	288
14 More on the generalized linear model: logistic and loglinear models	290
Chapter Aims	290
14.1 Introduction to the logistic and loglinear models	290
14.1.1 Variables and levels of measurement	291
14.1.2 Link functions revisited	292
14.1.3 Questions and extras	293
14.1.4 Model assumptions and overdispersion	293
14.2 Example data: urban birds	294
14.3 The binary logistic model	295
14.3.1 When to use	295
14.3.2 Binary logistic models and the four steps	296
14.3.3 Worked example: using SPSS	296
Answering question 3: How good is the model?	302
Answering question 2a: Is the model significant overall?	302
Answering question 2b: Are individual explanatory variables significant?	303
Answering question 1: What is the model?	304
Effect size	305
Checking for overdispersion	306
14.3.4 Literature link: death by AMI	306
14.4 The loglinear model	307
14.4.1 When to use	307
14.4.2 Loglinear models and the four steps	308
14.4.3 Worked example: using SPSS	308
Answering question 3: How good is the model?	313
Answering question 2a: Is the model significant overall?	313
Answering question 2b: Are individual explanatory variables significant?	314
Answering question 1: What is the model?	315
Effect size	316
Checking for overdispersion	317
14.4.4 Literature link: sea cows	317
14.5 The general, binary logistic, and loglinear models compared	318
14.6 Alternatives and extensions	318
Checklist of key points	320
Self-help questions	321

Answers to self-help questions	322
Chapter 1	322
Chapter 2	322
Chapter 3	322
Chapter 4	323
Chapter 5	323
Chapter 6	324
Chapter 7	324
Chapter 8	324
Chapter 9	325
Chapter 10	325
Chapter 11	325
Chapter 12	325
Chapter 13	325
Chapter 14	326
Appendix I How to enter data into SPSS	327
Name	327
Type, width, and decimals	327
Label	327
Values	327
Missing	328
Columns	328
Align	328
Measure	328
Role	329
Appendix II Statistical tables of critical values	330
χ^2	330
t	331
U	332
T	334
F	336
H	337
r	338
r_s	339
Appendix III Summary guidance on reporting statistical results	340
Descriptive statistics	340
Confidence intervals	340

Statistical tests	340
Effect size	342
Appendix IV Statistics and experimental design	343
Designs with control groups	343
Balanced and unbalanced design	343
Completely randomized designs	343
One-way or one-factor designs	343
Multi-way or multi-factor designs	344
Fully crossed designs	344
Incomplete designs	344
Blocking	344
Paired design	344
Covariate	344
Within-subject designs	345
Split-plot designs	345
