
Contents

1 The senses	1
Early studies of the anatomy of the sense organs	2
The physiology of sensation	2
Cracking the problem: molecular physiology	7
The revolution of molecular biology	9
Piezo proteins: channels mediating touch	13
The code deciphered: sensory transduction	15
2 Mechanisms of sensation	18
Sensory membrane	19
Organization of membrane and sensory protein	21
Membrane renewal	22
External specializations	26
Detection of the stimulus	29
Primary and secondary receptor cells	31
Sensitivity of transduction	32
Noise	34
Sex pheromone detection in the male moth	34
Summary	36
3 Channels and electrical signals	37
Structure and function of ion channels	37
Structure of the pore	38
Gating	40
Ionotropic receptor molecules	42
Membrane potentials	44
The Nernst equation	45
Ion homeostasis	47
The Goldman voltage equation	48
Driving force and voltage change	48
The voltage response of hair cells	49
The technique of voltage clamping	51
Voltage clamp of the hair cell	52
Voltage-clamped response of the hair cell	54
Ion selectivity	55
Summary	56

4 Metabotropic signal transduction	57
G-protein-coupled receptors	60
Heterotrimeric G proteins	61
Effector molecules	62
Second messengers	64
Measuring cell calcium	67
Channels gated by second messengers	68
Mechanism of gating by cyclic nucleotides	70
A metabotropic sensory receptor	73
Summary	73
5 Mechanoreceptors and touch	76
Mechanoreception in <i>Paramecium</i>	76
Transduction of touch in the round worm <i>C. elegans</i>	78
Crayfish stretch receptor	81
Insect mechanoreceptors	85
Mechanoreceptors and touch in mammals	91
Hairy skin	93
Merkel cells	94
Summary	97
6 Hearing and hair cells	99
Insect hearing: tympanal organs	99
Insect hearing: Johnston's organ	101
Hair cells	104
Tip links	106
Hair cell transduction proteins	109
The channels	109
Gating and bundle stiffness	112
Adaptation of hair cells	114
Organs of the lateral line	116
The vestibular system	116
The cochlea	121
Endolymph and endocochlear potential	122
Outer hair cells and tuning	124
Electrical resonance	127
Summary	130
7 Chemoreception and the sense of smell	132
Chemotaxis	132
Olfaction in insects	135
Insect receptor proteins	138
Coding of olfaction in insects	140
Olfaction in vertebrates: the primary olfactory epithelium	142
Olfactory receptor proteins	143
The mechanism of transduction	144
Desensitization and adaptation	148

Coding in the principal olfactory epithelium	149
The olfactory bulb	151
The accessory olfactory system and vomeronasal organ	154
Summary	156
8 Taste	159
Gustation in insects	160
Mammals: taste buds and the tongue	164
Taste transduction: metabotropic receptors	164
Bitter	165
Sweet	166
Umami	166
Transduction cascade	166
Taste transduction: ionotropic detection	168
Salty	168
Sour	172
The coding of taste	174
Summary	175
9 Photoreception	178
Photopigment activation	179
Phototransduction	181
The photoreceptors of arthropods	183
Transduction in arthropods	185
Photoreceptor channels in arthropods	189
The role of Ca^{2+} in the regulation of gain and turnoff	192
Vertebrate rods and cones	195
Transduction in vertebrate photoreceptors	197
Ion channels of rods and cones	198
The photocurrent	200
Shutting down the light response	204
Light adaptation	209
Pigment renewal and the recovery of sensitivity after bright light	211
Intrinsically photosensitive retinal ganglion cells	213
Summary	215
10 Extra sensory receptors	217
Thermoreception	217
Seeing in the dark: heat receptors as detectors of infrared	221
Electroreception	224
Tuberous receptors and electrolocation	230
Magnetoreception	233
Magnetoreception in migrating birds	235
Summary	238
References	241
Index	273
