Preface	vii
Acknowledgements	ix
Introduction—a biology lesson from the bats	xi
1. Evolution and diversity	1
Evolution	1
Classification and the distribution and diversity of bats	18
Yinpterochiroptera	20
Yangochiroptera	26
Adaptive radiation—why are the Phyllostomidae so numerous and so diverse?	35
2. Flight	37
Some basic aerodynamics: aerofoils and flapping flight	37
The evolution of flight	43
The advantages of flight and the demands on the flyer: physiological and biomechanical aspects of flight	46
The wing and what it does in flight	50
Ecological aspects of flight	51
3. Echolocation and other senses	61
What is echolocation?	61
Sound generation and perception in echolocating bats	63
Echolocation calls	64
How do bats avoid being confused by other bats' sonar?	80
Auditory adaptations and the neural basis of echolocation	80
Echolocation and behavioural studies in the wild	82
The cost of echolocation and its consequences	86
Other senses	88
The ecology of echolocation: interactions between flight, food, and foraging habits	90
Evolution of echolocation.....	92
4. Torpor and hibernation	97
Energy balance.....	97
Concepts: ectothermy, endothermy, and heterothermy	97
Concepts: torpor and hibernation	99
The cost of staying warm—the importance of body size	99
The physiology of torpor	102

The ecology of torpor and hibernation	104
Biological clocks	109
Evolution of torpor and hibernation	111
5. Reproduction and development	113
Reproductive cycles	113
Gestation	118
Birth, development, and survival	119
Infant-mother communication and maternal care	124
Roost selection and maternal foraging patterns	125
Mating behaviour	126
6. Roosting and feeding ecology	137
Roosting ecology	137
Feeding ecology	154
Information transfer	163
Interactions between habitat, food, foraging, social structure, and behaviour	165
7. Migration, social structure, and population structure	175
Migration	175
Navigation	179
Social and population structure	180
8. Biogeography, macroecology, community ecology, and the interactions between bats and other organisms	195
Biogeography and macroecology	195
Community ecology	211
Predators and prey	220
9. Conservation	239
Why conserve bats?	239
An overview of current status	239
Identifying and predicting conservation needs	241
Threats to bats	243
From the negative to the positive: how to conserve bats	266
Bat conservation organizations	284
References	285
Index	319
