1 Introduction	1
<i>Angela R. McLean and Robert M. May</i>	
2 How populations cohere: five rules for cooperation	7
<i>Martin A. Nowak and Karl Sigmund</i>	
3 Single-species dynamics	17
<i>Tim Coulson and H. Charles J. Godfray</i>	
4 Metapopulations and their spatial dynamics	35
<i>Sean Nee</i>	
5 Predator-prey interactions	46
<i>Michael B. Bonsall and Michael P. Hassell</i>	
6 Plant population dynamics	62
<i>Michael J. Crawley</i>	
7 Interspecific competition and multispecies coexistence	84
<i>David Tilman</i>	
8 Diversity and stability in ecological communities	98
<i>Anthony R. Ives</i>	
9 Communities: patterns	111
<i>Robert M. May, Michael J. Crawley, and George Sugihara</i>	
10 Dynamics of infectious disease	132
<i>Bryan Grenfell and Matthew Keeling</i>	
11 Fisheries	148
<i>John R. Beddington and Geoffrey P. Kirkwood</i>	
12 A doubly Green Revolution: ecology and food production	158
<i>Gordon Conway</i>	
13 Conservation biology: unsolved problems and their policy implications	172
<i>Andy Dobson, Will R. Turner, and David S. Wilcove</i>	

14 Climate change and conservation biology	190
<i>Jeremy T. Kerr and Heather M. Kharouba</i>	
15 Unanswered questions and why they matter	205
<i>Robert M. May</i>
