Preface	xvii
1 Parasites and humans	1
1.1 Mission impossible	1
1.2 Some lessons provided by yellow fever	3
1.2.1 The parasite life-cycle can be complex	4
1.2.2 Not all host and parasite strains are the same	4
1.2.3 Complex physiological and molecular mechanisms underlie the infection	4
1.2.4 Parasites and hosts are populations	5
1.2.5 Parasites can be controlled when we understand them	5
1.3 Parasites in our times	6
Summary	8
2 The study of evolutionary parasitology	9
2.1 The evolutionary process	9
2.2 Questions about host-parasite interactions	12
2.3 Selection and units that evolve	13
2.4 Life history	14
2.5 Studying adaptation: optimality and evolutionarily stable strategies (ESS)	14
2.5.1 Optimality	15
2.5.2 Evolutionarily stable strategies (ESS)	16
2.6 Comparative studies	16
Summary	17
3 The diversity and natural history of parasites	18
3.1 The ubiquity of parasites	18
3.2 A systematic overview of parasites	20
3.2.1 Viruses	20

3.2.2	Prokaryotes	21
3.2.2.1	Archaea	22
3.2.2.2	Bacteria	22
3.2.3	The basal Eukaryotes	24
3.2.4	Protozoa	24
3.2.4.1	Mastigophora	25
3.2.4.2	Sarcodina	25
3.2.4.3	Sporozoa	26
3.2.4.4	Ciliophora	26
3.2.5	Fungi	27
3.2.6	Nematodes (roundworms)	28
3.2.7	Flatworms	29
3.2.8	Acanthocephala	30
3.2.9	Annelida	30
3.2.10	Crustacea	31
3.2.10.1	Pentastomida	31
3.2.10.2	Copepods	31
3.2.10.3	Isopods	31
3.2.10.4	Branchiura (fish lice)	31
3.2.10.5	Other groups	31
3.2.11	Mites (Acari), ticks, lice (Mallophaga, Anoplura)	32
3.2.12	Parasitic insects (parasitoids)	33
3.3	The evolution of parasitism	33
3.3.1	Evolution of parasitism in nematodes	34
3.3.2	Evolution of parasitism in trypanosomes	35
3.4	The diversity and evolution of parasite life-cycles	38
3.4.1	Steps in a parasite's life-cycle	38
3.4.1.1	Step 1: finding a host	38
3.4.1.1.1	Passive dispersion	39
3.4.1.1.2	Active host-finding	39
3.4.1.2	Step 2: infecting and establishment in the host	39
3.4.1.3	Step 3: growth, multiplication	40
3.4.1.4	Step 4: reproduction	40
3.4.1.5	Step 5: transmission	40
3.4.2	Modes of transmission	40
3.4.2.1	Direct transmission	40
3.4.2.2	Transmission with paratenic hosts	40
3.4.2.3	Vector transmission	42
3.4.3	Trematode life-cycles	42
3.4.4	The evolution of complex parasite life-cycles	46
	Summary	51
4	The natural history of defences	52
4.1	The defence sequence	52
4.1.1	Pre-infection defences	52
4.1.1.1	Spatial avoidance	52
4.1.1.2	Temporal avoidance	53

4.1.1.3	Avoiding certain diets	53
4.1.1.4	The selfish herd	55
4.1.1.5	Mating behaviour and mate choice	55
4.1.1.6	Self-medication	55
4.1.1.7	Anticipatory defences	55
4.1.1.8	Genetic defences	55
4.1.2	Post-infection defences	55
4.1.2.1	Behavioural changes	56
4.1.2.2	Grooming	56
4.1.2.3	Fever and chilling	57
4.1.3	Social immunity	57
4.2	Defence by the immune system	59
4.3	Basic elements of the immune defence	60
4.3.1	Humoral and cellular defences	60
4.3.1.1	Phagocytosis	62
4.3.1.2	Melanization, encapsulation	64
4.3.1.3	Clotting, nodule formation	64
4.3.1.4	Inflammation	65
4.3.2	Innate and adaptive (acquired) immunity	65
4.3.2.1	Innate immune defence	65
4.3.2.2	Adaptive (acquired) immunity	65
4.3.3	Signalling cascades	66
4.3.3.1	Plants	68
4.3.3.2	Insects	68
4.3.3.3	Mammals	68
4.3.4	Proteolytic cascades	71
4.3.5	The deployment of effectors	73
4.4	Immune defence protein families	73
4.4.1	Immunoglobulin-superfamily (IgSF)	73
4.4.2	Leucine-rich repeats (LRRs)	73
4.4.2.1	Toll and Toll-like receptors (TLRs)	74
4.4.3	Lectins	74
4.4.4	Other important families	74
4.4.4.1	Tumour necrosis factor family (TNF)	74
4.4.4.2	Cytokine receptor families	75
4.4.4.3	Chemokine receptor family	75
4.4.4.4	PGRP, GGBP	75
4.4.4.5	NOD and other intra-cellular sensors	75
4.4.4.6	Scavenger receptors (SRCR)	75
4.4.4.7	Down syndrome cell adhesion molecules (Dscam)	75
4.4.4.8	Fibrinogen-related protein (FREP)	76
4.4.4.9	Variable domain chitin-binding proteins (VCBPs)	76
4.4.4.10	Anti-microbial peptides (AMPs)	76
4.5	The generation of diversity in recognition	78
4.5.1	Polymorphism in the germ line	78
4.5.2	Somatic generation of diversity	80
4.5.2.1	Alternative splicing	80
4.5.2.2	Somatic rearrangement, copy choice	82
4.5.2.3	Somatic (hyper-) mutation, gene conversion	82

4.5.3	The structure of immunoglobulins of B- and T-cells	83
4.5.3.1	B-cells	83
4.5.3.2	T-cells	87
4.6	The diversity of immune defences	88
4.6.1	Defence in prokaryotes	88
4.6.2	Defence in plants	88
4.6.3	Defence in invertebrates	89
4.6.3.1	Nematodes	89
4.6.3.2	Molluscs	89
4.6.3.3	Insects	89
4.6.3.4	Sea urchins	89
4.6.4	Early vertebrates	90
4.6.4.1	Cephalochordates	90
4.6.4.2	Urochordates (tunicates)	90
4.6.4.3	Jawless vertebrates	90
4.6.5	The jawed (higher) vertebrates	90
4.7	Evolution of the immune system	94
4.7.1	Recognition of non-self	94
4.7.2	The evolution of adaptive immunity	94
	Summary	97
5	Ecological immunology	98
5.1	Variation in parasitism	98
5.1.1	Variation in parasite load	98
5.1.2	Variation in susceptibility and immune response	102
5.2	Ecological immunology: the costs of defence	105
5.2.1	General principles	105
5.2.2	Defence costs related to life history and behaviour	107
5.2.3	Cost of evolving immune defences	109
5.2.3.1	Genetic costs associated with the evolution of immune defences	109
5.2.3.2	Physiological costs associated with the evolution (maintenance) of immune defences	110
5.2.4	Cost of using immune defences	113
5.2.4.1	Genetic costs associated with the deployment of immune defences	113
5.2.4.2	Physiological costs associated with the deployment of immune defences	113
5.2.4.3	Costs due to self-reactivity	116
5.3	The nature of defence costs	117
5.3.1	What is the limiting resource?	118
5.3.1.1	Energy	118
5.3.1.2	Food and nutrients	120
5.3.2	Regulation of allocation	121
5.3.2.1	Hormones as mediators	121
5.4	'Immunocompetence' and the benefits of defence	123

5.4.1	Correlating immune response and fitness	123
5.4.2	Phenotype, immunocompetence, and fitness	124
5.5	Strategies of immune defence	124
5.5.1	Optimal defence to increase recovery rate	129
5.5.2	Specific vs. general defence	130
5.5.3	Constitutive vs. induced defence	130
5.5.4	Optimal memory	132
5.5.5	Robust defence	132
5.5.6	Optimal defence and host lifespan	135
5.6	Tolerance as defence element	136
5.6.1	Measuring tolerance	137
5.6.2	The evolutionary consequences of tolerance	139
	Summary	140
6	Parasites, immunity, and sexual selection	141
6.1	Differences between the sexes	141
6.1.1	Males are generally more prone to parasites	141
6.1.2	The role of sex hormones in vertebrates	144
6.2	Parasites and sexual selection	145
6.2.1	Female mate choice, immunity, and parasitism	147
6.2.2	Males indicate quality of resisting parasites	148
6.2.2.1	<i>The Hamilton-Zuk hypothesis</i>	148
6.2.2.2	<i>Symmetry as an indicator of male quality</i>	151
6.2.2.3	<i>The immunocompetence handicap hypothesis</i>	152
6.2.2.4	<i>Immunosuppression to avoid self-damage</i>	153
6.2.3	Male genotype and female self-reference	155
6.2.3.1	<i>Heterozygosity advantage</i>	155
6.2.3.2	<i>Dissimilar genes</i>	155
6.3	Sexual selection and immunity in invertebrates	159
	Summary	164
7	Specificity	165
7.1	Measuring specificity and host range	165
7.1.1	List of observed hosts	165
7.1.2	Screening with genetic tools	166
7.1.3	Experimental infections	166
7.2	Host-specificity of parasites	170
7.3	Evolution of the host range	170
7.3.1	Host range and ecological specialization	170
7.3.2	Factors affecting host range	173
7.3.2.1	<i>Host range is limited by phylogenetic constraints</i>	173
7.3.2.2	<i>Host range depends on the phylogenetic age of the parasite group</i>	173
7.3.2.3	<i>Host range depends on transmission mode</i>	173
7.3.2.4	<i>Host range depends on the complexity of the life-cycle</i>	174

7.3.2.5	Host range depends on the stages of the parasite's life-cycle	174
7.3.2.6	Host range depends on the virulence of the parasite	174
7.3.2.7	Host range depends on the variation in host availability	175
7.3.2.8	Host range depends on parasite geographic distribution	175
7.3.2.9	Host range depends on immune defences	175
7.4	Specific defences of the host	177
7.4.1	Specificity beyond the immune system	177
7.4.1.1	Behavioural defences	177
7.4.1.2	Physical and chemical barriers	177
7.4.2	Specificity of the adaptive immune system	177
7.4.3	Specificity of the innate immune system	179
7.5	Memory, immune priming, and trans-generational transfer	179
7.5.1	Individual immune memory	180
7.5.2	Trans-generational protection	180
7.6	Adaptive diversity and cross-reactivity	184
	Summary	186
8	Parasite immune evasion and manipulation of host phenotype	187
8.1	Parasites manipulate their hosts	187
8.2	The diversity of immune-evasion mechanisms	190
8.2.1	Passive evasion	190
8.2.1.1	Hide away	190
8.2.1.2	Becoming 'invisible'	190
8.2.1.3	Changing identity	190
8.2.1.4	Population escape by mutation	190
8.2.1.5	Molecular mimicry	191
8.2.1.6	Quiescence	191
8.2.1.7	Capsule formation	191
8.2.2	Active evasion	191
8.2.3	Targets of immune evasion	193
8.2.3.1	Escape recognition	196
8.2.3.2	Avoid complement attack	196
8.2.3.3	Avoid being killed by polymorphonuclear cells (PMNs)	196
8.2.3.4	Avoid being killed by macrophages and phagocytes	196
8.2.3.5	Manipulate the signalling network	197
8.2.3.6	Interference with the antigen presentation and processing pathways	197
8.2.3.7	Avoid being killed by the effectors	197
8.3	Manipulation of the host phenotype to increase transmission	198
8.3.1	Manipulation of host behaviour	198
8.3.1.1	Site of transmission in space and time	198
8.3.1.2	Transmission from host to vector	203
8.3.1.3	Time of transmission	203
8.3.2	Change of host morphology	204
8.3.3	Affecting transmission routes	204
8.3.4	Affecting social behaviour	207
8.4	Manipulation of the host phenotype to increase infection lifetime	207

8.4.1	Fecundity reduction	207
8.4.2	Changes of the social context	209
8.5	Mechanisms of host phenotype manipulation	210
8.6	Strategies of manipulation	213
8.6.1	What manipulation effort?	213
8.6.2	Multiple infections	214
8.7	Ecological significance of manipulation	217
	Summary	217
9	Infection and pathogenesis	219
9.1	Infection and dose	219
9.1.1	Analysing infective dose	223
9.1.1.1	<i>Individual effective dose (threshold model)</i>	223
9.1.1.2	<i>Independent action model</i>	223
9.1.2	The manipulation hypothesis	228
9.2	Similar parasites cause different pathologies	229
9.2.1	The common cold	229
9.2.2	Influenza	229
9.3	Pathogenesis: the mechanisms of virulence	230
9.3.1	Impairing host capacities	232
9.3.2	Destruction of tissue	232
9.3.3	Virulence factors	232
9.3.3.1	<i>Adhesion factors (adhesins)</i>	233
9.3.3.2	<i>Colonization factors</i>	233
9.3.3.3	<i>Invasion factors (invasins)</i>	233
9.3.3.4	<i>Immune evasion factors</i>	233
9.3.3.5	<i>Toxins</i>	233
9.3.4	Toxins	234
9.3.5	Proteases	236
9.3.6	Pathogenesis by opportunistic infections	237
9.4	Immunopathology	237
9.4.1	Immunopathology associated with cytokines	238
9.4.2	Immunopathology caused by immune-evasion mechanisms	238
9.5	The genetics of pathogenesis	241
	Summary	243
10	Host-parasite genetics	244
10.1	The genetic architecture of host resistance	244
10.1.1	Number and location of host resistance genes	244
10.1.1.1	<i>QTL-mapping</i>	244
10.1.1.2	<i>Genomic sequences</i>	245
10.1.1.3	<i>Comparative genetic studies</i>	245
10.1.1.4	<i>Resistance in plants and animals</i>	246
10.1.2	Genetics of parasite virulence	250

	10.1.2.1	Genetics of virulence in bacteria	250
	10.1.2.2	Example: genetics of virulence in <i>Salmonella</i>	253
	10.1.3	Variation in gene expression	256
10.2		Evolutionary genetics of host-parasite interactions	259
	10.2.1	Interaction between genotypes	259
	10.2.2	Models of genotypic interactions	263
	10.2.2.1	Gene-for-gene interaction (GFG)	263
	10.2.2.2	Matching specificities (matching alleles)	266
	10.2.3	Epistasis	267
	10.2.4	Inbreeding and heterozygosity	268
	10.2.4.1	Genetically variable populations	268
	10.2.4.2	Individual heterozygosity	272
10.3		Signatures of selection	272
	10.3.1	Selection drives populations genetically apart	274
	10.3.1.1	Phylogeny of haplotypes	274
	10.3.1.2	Testing for genetic divergence	274
	10.3.2	Selection affects non-synonymous mutations	275
	10.3.3	Selective sweeps leave traces of linkage along the genome	275
10.4		Genetic structure of protozoan parasites	276
		Summary	278
11		Epidemiology	279
11.1		Population biology of host-parasitoid systems	279
11.2		Epidemiology of infectious diseases: microparasites	282
	11.2.1	The SIR-model	285
	11.2.2	Vaccination	288
	11.2.3	Stochastic epidemiology	293
	11.2.4	Spatial heterogeneity	295
11.3		Endemic infections and periodic outbreaks	295
11.4		Epidemiology of vectored microparasites	296
11.5		Epidemiology of macroparasites	297
	11.5.1	The distribution of macroparasites among hosts	298
	11.5.2	Population dynamics and models for macroparasites	299
11.6		Immuno-epidemiology	299
	11.6.1	Effects of immune response on parasites	302
	11.6.2	Effects of acquired immunity on epidemiological patterns	303
	11.6.3	Effects of immunity on population dynamics	305
11.7		Epidemiology with evolutionary change	305
11.8		Within-host epidemiology	307
	11.8.1	Within-host dynamics of parasites	308
	11.8.2	Within-host competition between parasite strains	309
		Summary	311

12	Virulence	312
12.1	Virulence	312
12.1.1	Different meanings of virulence	312
12.1.2	Virulence as a non-adaptive phenomenon	312
12.1.2.1	<i>Virulence as a side-effect</i>	313
12.1.2.2	<i>Short-sighted evolution</i>	314
12.1.2.3	<i>Virulence a negligible effect for the parasite</i>	315
12.1.3	Virulence as an evolved trait	315
12.2	The evolution of virulence	319
12.2.1	Avirulence theory	319
12.2.2	Virulence as an adaptive trait	319
12.3	Concepts of virulence evolution	322
12.3.1	Basic principles of evolutionary theory	322
12.3.2	The recovery-virulence trade-off	323
12.3.3	The transmission-virulence trade-off	323
12.3.4	Horizontal vs. vertical transmission	327
12.3.5	Host density and background mortality	330
12.3.6	Host population size affected by parasitism	330
12.4	Within-host evolution	331
12.4.1	Within-host replication and clearance of the infection	331
12.4.2	Multiple infections	331
12.4.3	Kinship among co-infecting parasites	334
12.4.4	Medical intervention and virulence	339
12.4.5	Obligate killers	344
12.4.6	Immunopathology and virulence	344
12.5	Life history of infection events	344
12.5.1	The timing of benefits and costs	344
12.5.2	A generalized theory: the sensitivity framework	346
12.6	Within- vs. between-host selection	348
12.7	Host population structure	350
12.7.1	Spatial structure	350
12.7.2	Variation in host types	350
12.7.3	Social structure	351
12.8	Non-equilibrium virulence	351
	Summary	352
13	Host-parasite (co-)evolution	354
13.1	Macro-evolution	354
13.2	Micro-evolution	359
13.2.1	Evolution of antibiotic resistance	360
13.2.2	Costs of antibiotic resistance	362

13.3	Micro-evolution: the maintenance of diversity	364
13.3.1	Antagonistic host-parasite co-evolution	364
13.3.2	Time-lagged negative frequency-dependent selection	365
13.3.3	Local adaptation	369
13.4	Antagonistic co-evolution, sex, and recombination	374
13.4.1	Sexual reproduction	374
13.4.2	Meiotic recombination	374
13.5	The evolution of sex and recombination under parasitism	375
13.5.1	The evolution of sex	376
13.5.2	The evolution of meiotic recombination	376
13.5.3	Empirical evidence: advantage for sex	379
13.5.4	Empirical evidence: advantage for recombination	383
13.6	Selective sweeps	386
	Summary	389
14	Ecology	390
14.1	Parasites and host life-history	390
14.1.1	Changes in reproductive patterns	390
14.1.2	Gigantism	391
14.1.3	Group living	393
14.2	Host populations	395
14.2.1	Population regulation by parasites	397
14.2.2	Population decline and extinction	399
14.3	Host ecological communities	401
14.3.1	Parasite effects on host competition	401
14.3.2	Communities of hosts	401
14.3.3	Food webs	405
14.4	Parasite ecology	406
14.4.1	Geographical patterns	406
14.4.1.1	<i>Species-area relationship</i>	406
14.4.1.2	<i>Species-isolation relationship</i>	406
14.4.1.3	<i>Latitudinal gradients</i>	407
14.4.2	Parasite community assembly	409
14.5	Invasions	410
14.5.1	Host invasions	410
14.5.1.1	<i>Escape from parasites</i>	411
14.5.1.2	<i>Characteristics of parasites</i>	411

14.5.2	Invasion by parasites (disease emergence)	411
14.5.2.1	Biological processes	411
14.5.2.2	Abiotic correlates of parasite invasion success	413
14.5.2.3	Global patterns	413
14.5.3	Climate change and disease emergence	414
	Summary	415
	 Glossary	417
	List of Immunological Acronyms	429
	References	435
	Subject Index	499
	Taxonomic Index	506
