1 Introduction	1
1.1 Overview of this Book	1
1.2 The Ecological Importance of Insects	2
1.3 Insects as Models for the Study of Ecological Responses	3
1.4 Insect Evolutionary History and Phylogenetic Diversity	5
1.5 Themes of this Book	8
2 Basic Insect Functional Anatomy and Physiological Principles	16
2.1 Insect Lifecycles	16
2.2 The Cuticle	17
2.3 Insect Muscles	23
2.4 Insect Respiratory Systems	31
2.5 Insect Circulatory Systems	39
2.6 Metabolic Systems in Active and Resting Insects, and in Diapause	47
2.7 Insect Feeding and Digestive Systems	50
2.8 Insect Renal Systems	56
2.9 Insect Nervous System	57
2.10 Energizing Nutrient and Water Transport across Insect Epithelia	62
3 Temperature	64
3.1 Defining the Problem	64
3.2 Sensing Temperature and Control	72
3.3 Heat Balance and Mechanisms of Thermoregulation	76
3.4 Thermotolerance Mechanisms	88
3.5 Evolution of Thermoregulation and Thermotolerance	97
4 Water	102
4.1 Defining the Problem	102
4.2 Whole-Insect Water Balance	103
4.3 Evolution of Desiccation Resistance in <i>Drosophila</i>	113
4.4 Hormonal Control of Water Balance	117
4.5 Controlling Where Water Goes: Aquaporins	122

4.6	Insects Living in Water	128
4.7	Why are There No Marine Insects?	137
5	Nutrition, Growth, and Size	140
5.1	Defining the Problem	140
5.2	Behavioral Responses to Food	161
5.3	Post-ingestive Responses of Individual Insects to Food	169
5.4	Thermal Effects on the Rate and Efficiency of Feeding and Growth	180
5.5	Adaptations of Feeding and Digestive Systems in Populations and Species	183
5.6	Regulation of Growth and Development	198
5.7	Body Size	210
6	Oxygen	216
6.1	Defining the Problem	216
6.2	Responses to Hypoxia	233
6.3	Sensing and Responding to Hypoxia	247
6.4	Living at High Altitudes	251
6.5	Living in Water	256
7	Techniques and Applications	263
7.1	Insect Molecular Biology	263
7.2	Working with Insects—Behavior and Physiology	264
7.3	Metabolism, Gas Exchange, Internal Gases, Air Flow	268
7.4	Water, Ions, Transport	274
7.5	Temperature	278
7.6	Cardiac Physiology	280
7.7	Issues with Using the Comparative Method in Insects	282
8	Conclusions and Future Directions	283
8.1	Insects and Anthropogenic Perturbation of the Environment	283
8.2	Lifecycle Approach	284
8.3	Interactions of Behavior, Plasticity, and Evolution	284
8.4	Environmental Physiology of Insects from the Field	285
8.5	Paleophysiology	287
8.6	Fundamental Principles of Scaling	288
8.7	Remote monitoring of Insect Physiology, Behavior, and Environment	288
8.8	High-end Imaging	289
8.9	Internationalization of Environmental and Ecological Insect Physiology	290
	Bibliography	291
	Index	367
