

Contents

- List of illustrations xi
- Preface xiii
- 1 What are stem cells? 1
 - 2 Embryonic stem cells 19
 - 3 Personalized pluripotent stem cells 34
 - 4 Potential therapies using pluripotent stem cells 50
 - 5 Tissue-specific stem cells 70
 - 6 Current therapy with tissue-specific stem cells 87
 - 7 Realistic and unrealistic expectations 103
- Glossary 114
- Further reading 122
- Index 125
- 1 A colony of human ES cells 34
Mediated from Fig. 3.1, Chapt. 3, M. W. Slack, *Developmental Biology*, 2nd edn (Garland Science, New York 2005)
- 2 An example of a procedure used to control differentiation of human ES cells 36
Reproduced from Fig. 3.2, Chapt. 3, M. W. Slack, *Developmental Biology*, 2nd edn (Garland Science, New York 2005)
- 3 Procedure used for cloning of whole mouse 36
Reproduced from Fig. 3.3, Chapt. 3, M. W. Slack, *Developmental Biology*, 2nd edn (Garland Science, New York 2005)
- 4 Procedure for making induced pluripotent stem (iPS) cells 42
Reproduced from Fig. 4.1, Chapt. 4, M. W. Slack, *Developmental Biology*, 2nd edn (Garland Science, New York 2005)
- 5 A colony of human iPS cells 45
Courtesy of Liang Guo, University of Massachusetts Stem Cell Institute
- 6 A colony of human iPS cells 45
Courtesy of Liang Guo, University of Massachusetts Stem Cell Institute
- 7 Locational stem cells 73
Reproduced from Fig. 4.2, P. Poole, *Quanta: The Tropic and the Hair Skin-Cycling Cells in the Stem Cell Niche*, Cell 125, 527-9
