

Contents

List of contributors	xvii
Abbreviations	xix
1. Types of growth factor activity: detection and characterization of new growth factor activities	1
<i>I. A. McKay</i>	
1. Introduction	1
2. Types of growth factor activity	1
Nature of the activity	1
Modes of factor action	2
3. Known growth factors	4
4. Choice of source material containing putative factors	4
Whole organism, organ, tissue, or cell preparations	4
Conditioned medium from cultured cells	5
Other sources	5
5. Identification of new factors	6
Choice of assays of factor activity	6
Purification of the factor	9
cDNA cloning and sequencing	9
6. What to do with a new factor	10
Acknowledgements	11
References	11
2. Detection of polypeptide growth factors: application of specific bio-assays and PCR technology	13
<i>E. J. J. Van Zoelen, B. Delaey, B. Van der Burg, and D. Huylebroeck</i>	
1. Introduction	13
2. The concept of growth factor-dependence	14
Growth factor-dependence of cellular proliferation	14
Growth factor-dependence of human MCF-7 breast cancer cells	17

Contents

3. Polypeptide growth factors of the insulin-like growth factor family	18
4. Biological assay for the detection of IGF activity	22
5. Application of PCR technology for detection of growth factor gene expression	26
Introduction	26
Important parameters for the PCR approach	27
6. Example: RT-PCR on human keratinocyte RNA	32
Acknowledgement	33
References	33
 3. Induction of DNA synthesis and cell division in quiescent cells in response to small peptide growth factors	 35
<i>Anthony N. Corps and Kenneth D. Brown</i>	
1. Introduction	35
Solubilization and storage of small peptide mitogens	36
2. Induction of quiescence in Swiss 3T3 cells	37
3. Stimulation and measurement of DNA synthesis in quiescent Swiss 3T3 cells	38
4. Signalling pathways in mitogenic stimulation	43
Synergy between growth factors	43
Direct and indirect assays of signalling pathways	45
Intervention in signalling pathways	51
The involvement of other signalling pathways	53
References	53
 4. Novel gene transcription in response to growth factors: gene isolation by differential plaque hybridization	 55
<i>P. Sanjeeva Reddy and Brent H. Cochran</i>	
1. Introduction	55
2. Constructing the cDNA library	57
3. Screening the library	67
Acknowledgements	71
References	71

5. Embryological assays for growth factors	73
<i>J. M. W. Slack</i>	
1. Introduction	73
2. Embryonic development of <i>Xenopus laevis</i>	74
Mesoderm induction	75
3. Working with <i>Xenopus</i> embryos	75
MIF assays	79
Isolated cell assays	81
4. Scope of embryological assays	83
References	83
 6. The role of TGF-β in bone growth and bone repair	 85
<i>R. T. Ballock and A. B. Roberts</i>	
1. Introduction to bone synthesis and repair	85
Intramembranous ossification	85
Endochondral ossification	86
Bone repair	86
Bone remodelling	88
2. TGF- β is present during bone formation and repair <i>in vivo</i>	88
Studies of TGF- β immunolocalization	91
3. Models used to study bone cell biology <i>in vitro</i>	92
Primary osteoblast cultures	93
Osteoblast cell lines	94
Primary osteoblasts versus osteoblastic cell lines	95
4. Normal and transformed osteoblasts synthesize and respond to TGF- β	96
Osteoblasts synthesize TGF- β <i>in vitro</i>	96
Practical tips on storage and handling of TGF- β	98
TGF- β synthesis by osteoblasts is modulated by systemic hormones	100
Biological effects of TGF- β on cultured osteoblasts	100
TGF- β may couple bone formation to bone resorption	103
5. TGF- β initiates ossification <i>in vivo</i> by both pathways of bone formation	104
6. Summary	105
Acknowledgements	106
References	106

7. Localization of growth factor mRNA in tissue sections by in situ hybridization	109
<i>Rosemary J. Akhurst</i>	
1. Introduction	109
2. Selection of experimental parameters	110
Choice of probe	110
Choice of labelling system	111
3. In situ hybridization procedure using ³⁵ S-labelled riboprobes	112
Precautionary measures	112
Preparation of tissue sections	112
Preparation of ³⁵ S-labelled riboprobes	115
Pre-hybridization treatment of tissue sections	120
Hybridization and washing conditions	121
Autoradiography	124
Staining and photomicrography of sections	126
4. Interpretation of results and artefacts	128
5. Problem solving	130
Acknowledgements	131
References	131
 8. Detection and characterization of growth inhibitory factors: epidermal inhibitory pentapeptide (EIP)	 133
<i>Philip Robinson, Paul Whitehead, and William Hume</i>	
1. Introduction	133
2. Characterization of EIP activity in vivo and in vitro	133
In vivo studies	133
In vitro studies	142
3. Identification and characterization of a serum associated EIPase activity	145
4. Generation of antisera to EIP and their use to detect the parent protein	147
5. Discussion	153
Acknowledgements	153
References	154

9. Expression of growth factors in microbial systems	157
<i>Timothy J. Dudgeon, John M. Clements, and Michael G. Hunter</i>	
1. Introduction	157
2. Gene design	157
<i>De novo</i> gene synthesis	158
Engineering of cDNAs	161
3. Choice of expression route	163
<i>E. coli</i> expression	164
Yeast expression	167
Analysis	167
4. Expression of EGF and TGF- α	168
As an intracellular fusion protein in <i>E. coli</i>	168
As a secreted product from <i>E. coli</i>	170
As a secreted product from <i>Bacillus brevis</i>	170
As a secreted product from yeast	171
5. Expression of PDGF by secretion from yeast	171
Construction of the expression plasmid	171
Expression studies	172
Purification	175
Acknowledgements	177
References	177
 10. Immunoassays for growth factors	 181
<i>Stephen J. Capper</i>	
1. Introduction	181
2. Choice of label	184
3. Labelling of growth factors and antibodies	186
Iodination	186
Enzymatic labelling of antibodies	189
Evaluation of enzyme labelled conjugates and development of an ELISA	190
4. Examples of immunoassays for growth factors	191
5. Interpretation of data	193
6. Receptor binding assays using scintillation proximity assay (SPA)	194
Acknowledgements	198
References	198

11. Determination of growth factor receptor distribution by immunocytochemistry or autoradiography, and quantitation by ligand binding or FACS analysis	201
<i>Claire Linge and Martin R. Green</i>	
1. Introduction	201
Safe handling of radioactive materials	202
2. Autoradiography to detect growth factor receptors	202
Introduction	202
Planning experiments	203
Autoradiography methods	206
Calculation of the specific activity of ^{125}I -labelled EGF	207
Interpretation of images	211
Failure to detect specific image	211
3. Immunohistochemical detection of growth factor receptors	212
Introduction	212
Tissue preparations	213
Storage and dilution of antibodies	214
Detection methods	215
Controls	215
Buffers, subbing, fixative, and substrate solutions	216
Problem solving	219
4. Determination of receptor affinity and number by ligand binding	220
General considerations	220
Binding studies	221
Scatchard analysis	222
Single-point saturation analysis	223
5. FACS assays	224
Background	224
Sample preparation	225
Selection of antibodies and ligands	226
Dilution of antibody or ligand	227
Non-specific binding	227
Collection of data—initial technical considerations	229
Analysis of data	230
Quantification of receptors	232
Estimating cell size and receptor density	233
Separation of cells according to receptor number or density	234
6. Interpretation of results	234
References	236

Appendices

A1	Growth factors	237
A2	Sources of cell strains and cell lines	244
A3	Amino acid abbreviations	245
A4	Names and addresses of suppliers	246
