List of protocols page xi

Abbreviations xv

1 Enzyme activities 1

Keith F. Tipton

1 Introduction 1

2 Enzyme specificity and nomenclature 1

3 Determination of enzyme activity 1

Reaction progress curves 2

The effects of enzyme concentration and expression of activities 3

Conditions for activity measurements 4

4 The effects of substrate concentration 5

The Michaelis-Menten relationship 5

Failure to obey the Michaelis-Menten equation 5

5 Enzyme inhibitors 9

Reversible inhibitors 9

Tight-binding inhibitors 26

Irreversible inhibitors 29

6 Behaviour *in vivo* 40

Recovery from irreversible inhibition 40

Effects of cellular processes 41

Inhibitor specificity 43

References 44

2 Gene expression 47

Luis Parada, Cem Elbi, Miroslav Dundr, and Tom Misteli

1 Introduction 47

2 Indirect immunofluorescence 48

3 GFP in fixed or living cells 51

4 Nuclear matrix preparation 53

5 Visualization of transcription sites 55

6 Fluorescence *in situ* hybridization 59

7 Chromosome preparation and staining 67

8 Fluorescent chromosome painting 70

References 76

3 Regulation of the cell cycle 79

Diana M. Gitig and Andrew Koff

- 1 Introduction 79
- 2 Cell biology: detection of cell cycle arrests 79
- 3 Genetics: knockout and transgenic mice 83
- 4 Biochemistry 85
 - In vitro*: recombinant proteins 85
 - In vivo*: extract reconstitution assays 86
- 5 Conclusions 91
- Acknowledgements 91
- References 91

4 Cellular bioenergetics 95

David G. Nicholls and Manus W. Ward

- 1 Introduction 95
- 2 Mitochondrial membrane potential 95
 - Monitoring dynamic changes in mitochondrial membrane potential with TMRM⁺ or rhodamine 123 97
 - Interpretation of dynamic whole cell fluorescence traces obtained with TMRM⁺ or rhodamine 123 99
 - Equilibrium monitoring of mitochondrial membrane potential 99
 - Cytoplasmic free Ca²⁺ concentration with fura-2 101
 - Simultaneous monitoring with TMRM⁺ or rhodamine 123 of dynamic changes in $\Delta\psi_m$ and cytoplasmic free calcium concentration 101
- 3 Monitoring mitochondrial superoxide generation 103
- 4 Monitoring hydrogen peroxide generation 104
- 5 ATP/ADP ratios in cultured neurons 104
- References 105

5 Targeting of nuclear-encoded proteins into and across the thylakoid membrane: isolation and analysis of intact chloroplasts and thylakoids from plants 107

Colin Robinson and Alexandra Mant

- 1 Introduction 107
 - Choice of plants 108
 - Growth conditions 108
- 2 Isolation of intact chloroplasts 108
- 3 *In vitro* synthesis of nuclear-encoded chloroplast proteins 113
- 4 Import of proteins into isolated chloroplasts 114
- 5 Import of proteins into isolated thylakoid membranes 118
 - The import pathway for thylakoid lumen proteins 118
 - The basic import assay 119
 - Some variations on the basic assay 120
 - Analysis of nuclear-encoded thylakoid membrane proteins 121
- References 125

6 Transport into and out of the nucleus 127

Patrizia Fanara, Adam C. Berger, Deanna M. Green, Henry Hagan, Michelle T. Harreman,
Kavita A. Marfatia, B. Booth Quimby, Maureen A. Powers, and Anita H. Corbett

- 1 Introduction 127
- 2 Nuclear transport assays 128
 - In vitro* protein import in permeabilized cells 128
 - In vivo* NLS-GFP protein import assay 132
 - Single nuclear pore transport assay 134
 - In vivo* transport studies using microinjection into *Xenopus* oocytes 134
 - In vivo* RNA localization using fluorescence *in situ* hybridization (FISH) 136
- 3 Nucleocytoplasmic protein shuttling assays 139
 - Heterokaryon assays 139
 - nup49 nuclear protein export assay in *S. cerevisiae* 141
 - Antibody injection to detect protein shuttling 142
- 4 Regulated nuclear transport: protein-protein interactions 143
 - Ligand binding studies using overlay assays 143
 - Fluorescence-based applications to map protein-protein interactions 147
- 5 Genetic approaches to studying nuclear transport 148
- References 149

7 Transport across the membrane of the endoplasmic reticulum 151

Karin Römisch

- 1 Introduction 151
- 2 Translocation into the ER and monitoring import 151
- 3 Interaction with chaperones and protein folding 158
- 4 Export of misfolded proteins from the ER to the cytosol for degradation 160
- References 162

8 *In vitro* reconstitution of early to late endosome transport: biogenesis and subsequent fusion of transport intermediates 165

Feng Gu and Jean Gruenberg

- 1 Introduction 165
- 2 Baby hamster kidney (BHK21) cell culture 167
- 3 Labelling of the different endosomal compartments in BHK cells 168
- 4 Homogenization and subcellular fractionation of BHK 170
- 5 *In vitro* reconstitution of the ECV/MVB formation from early endosomes 172
- 6 *In vitro* fusion of the ECV/MVBs with late endosomes 176
- 7 Conclusion 179
- References 179

9 Receptor biology 181

Mercedes Dosil, Pamela Montesana, and James B. Konopka

- 1 Introduction 181

CONTENTS

- 2 Ligand binding assays 181
 - General considerations 181
 - Assaying ligand binding to membrane preparations 182
 - Assaying ligand binding with whole cells 184
 - Data analysis 185
- 3 Epitope tags and fusion proteins 186
 - Protein detection tags 186
 - Chimeric receptors and GPCR-Gα fusion proteins 187
- 4 Receptor modifications and receptor structure 188
 - Post-translational modifications 188
 - Receptor structure 189
- 5 Receptor trafficking 190
 - Visualization of receptor trafficking and analysis of receptor loss from the plasma membrane 191
 - Membrane fractionation 191
- 6 Heterologous expression of receptors in yeast 194
 - Background 194
 - General considerations 194
 - Growth and transformation of yeast 195
 - Analysis of receptor expression and activation 196
- References 197

10 Measurement of signal transduction machinery 199

Matthew Hodgkin, Michael Wakelam, and Carolyn Armour

- 1 Introduction 199
- 2 Quantification of phospholipase C (PLC) signalling in cells 199
 - Measurement of PLC signal transduction pathway activity 200
 - Protein kinase C assay 205
 - Fluorescent quantification of changes in intracellular calcium concentration 207
- 3 Quantification of phospholipase D (PLD) activity in cells 208
 - Measurement of DAG and ceramide mass 209
- 4 Phosphatidylinositol 3-kinase (PI 3-kinase) signalling in cells 211
 - Measurement of PI 3-kinase downstream targets 212
 - Quantification of 3-phosphorylated lipids in cells 213
- 5 Measurement of small G protein function in cells 214
 - Additional notes on the measurement of SMG protein activation 216
- 6 Measurement of MAP kinase activation 217
 - ERK kinase activity 217
- 7 cAMP signalling in cells 219
- 8 Changes in cellular localization during signalling 220
 - Changes in cytoskeletal architecture 222
 - Visualization of signal transduction events in living cells 223
- References 223
