

Contents

Four steps to exam success *viii*

Using this guide *ix*

Acknowledgements *xiii*

Chapter 1

Molecules *1*

- 1.1 Bonds *1*
- 1.2 Proteins *4*
- 1.3 Lipids *10*
- 1.4 Carbohydrates *14*
- 1.5 DNA *19*
- 1.6 RNA *26*

Chapter 2

Cellular components *31*

- 2.1 Membranes *31*
- 2.2 Cytoskeleton *36*
- 2.3 Nucleoskeleton *41*
- 2.4 Cytosol *43*
- 2.5 Organelles *44*

Chapter 3

Enzymes *57*

- 3.1 Common features of enzymes *57*
- 3.2 Enzyme kinetics *58*
- 3.3 Enzyme inhibition *62*
- 3.4 Enzyme mechanisms *65*
- 3.5 Enzyme regulation *69*
- 3.6 Multienzyme complexes *72*

Chapter 4

Genome stability and gene expression *77*

- 4.1 DNA replication *78*

Contents

- 4.2 RNA synthesis (transcription) 88
- 4.3 Protein synthesis (translation) 101
- 4.4 DNA repair 112
- 4.5 DNA recombination 121
- 4.6 DNA exchange in bacteria 123

Chapter 5

Mammalian metabolic pathways 127

- 5.1 Anabolism and catabolism 127
- 5.2 Glucose breakdown and synthesis 131
- 5.3 Tricarboxylic acid (TCA) cycle 137
- 5.4 Oxidative phosphorylation 140
- 5.5 Glycogen breakdown and synthesis 143
- 5.6 Lipid breakdown and synthesis 147
- 5.7 Ketone body breakdown and synthesis 154
- 5.8 Amino acid breakdown and synthesis 156
- 5.9 Pentose phosphate pathway 162
- 5.10 Lactate and ethanol metabolism 164

Chapter 6

Integration in mammalian metabolism 167

- 6.1 Key organs in metabolic integration 168
- 6.2 Key metabolites in metabolic integration 172
- 6.3 Key aspects of fuel utilization 175
- 6.4 Key hormones in metabolic integration 178
- 6.5 Principles of hormone signalling in metabolism 183

Chapter 7

Metabolism of structural components 189

- 7.1 Nucleotides 189
- 7.2 Structural lipids 194
- 7.3 Glycoproteins 198
- 7.4 Vitamins 199

Chapter 8

Microbial and plant metabolism 201

- 8.1 Photosynthesis 202
- 8.2 Ancillary reactions of photosynthesis 208
- 8.3 Nitrogen assimilation 215
- 8.4 Ethanol production 218

Chapter 9

Biochemical techniques 219

- 9.1 DNA manipulation and analysis 220
- 9.2 cDNA, vectors, and libraries 231
- 9.3 Methods for cloning genes 236
- 9.4 Genome sequencing 239
- 9.5 Getting DNA into cells 240
- 9.6 Gene therapy 242
- 9.7 GM crops 243
- 9.8 RNA manipulation and analysis 243
- 9.9 Protein purification 248
- 9.10 Protein analysis 252
- 9.11 Immunological techniques 254
- 9.12 Biophysical techniques 262

Glossary 269

Index 283
