

BRIEF CONTENTS

Detailed contents vi

Preface xviii

Acknowledgments xxiii

Figure acknowledgments xxiv

Unit I Genes and genomes 2

- 1** The logic of genetic analysis 5
- 2** Model organisms and their genomes 44
- 3** Genomes, chromosomes, and epigenetics 89

Unit II Genes and mutations 142

- 4** Identifying and classifying mutants 145
- 5** Connecting a phenotype to a DNA sequence 216
- 6** Finding mutant phenotypes for cloned genes 262
- 7** Genome-wide mutant screens 283

Unit III Genes and populations 314

- 8** Genome-wide associations 317
- 9** Genetic analysis of complex traits 339
- 10** Genetic analysis using natural variation 362

Unit IV Genes and pathways 388

- 11** Using one gene to identify functionally related genes 391
- 12** Epistasis and genetic pathways 445
- 13** Pathways, networks, and systems 476
- 14** Genes, systems, and phenotypes 518

Glossary 539
