

Contents

1	Introducing the cell: the unit of life	1	3.1	Fine and gross anatomy, cells, tissues, organs and systems	86
	<i>Carole Hackney and David Furness</i>		3.2	Embryology and fetal development	92
1.1	Development of cell theory	4	3.3	Growth and development	104
1.2	Origins of cells	8		<i>Chapter summary</i>	108
1.3	Diversity of prokaryotic cells	10		<i>Further reading</i>	109
1.4	The general structure of eukaryotic cells	10		<i>Discussion questions</i>	110
1.5	Membrane systems	12	4	Blood cell genesis: red cell, white cell and platelet families	111
1.6	Nucleus	16		<i>Gavin Knight</i>	
1.7	Cytoplasm	18	4.1	Cellular components of the blood	111
1.8	Membrane systems and disease	26	4.2	Introduction to blood cell production	117
1.9	Cell division	35	4.3	Structure of the bone marrow	120
1.10	Different cells and tissue formation	41	4.4	Stem cells as the ultimate haemopoietic precursor	122
	<i>Chapter summary</i>	44	4.5	Control of haemopoiesis	124
	<i>Further reading</i>	44	4.6	First stages of haemopoiesis	125
	<i>Discussion questions</i>	45	4.7	Erythropoiesis	129
2	Studying cells: essential techniques	46	4.8	Hierarchy of erythropoiesis	130
	<i>Gavin Knight</i>		4.9	Thrombopoiesis	132
2.1	Where did the study of cells begin?	46	4.10	Haemostasis and the role of platelets	134
2.2	Introduction to microscopy	47	4.11	Granulopoiesis	135
2.3	Visualization of microscopic structures	60	4.12	Monopoiesis	135
2.4	Introduction to cytometrics	62	4.13	Abnormal haemopoiesis	137
2.5	Cytogenetic analysis	65		<i>Chapter summary</i>	139
2.6	Molecular biology	70		<i>Further reading</i>	139
	<i>Chapter summary</i>	80		<i>Discussion questions</i>	139
	<i>Further reading</i>	80	5	Nerves: the cells of the central and peripheral nervous systems	141
	<i>Discussion questions</i>	81		<i>Rosalind King and Richard Mathias</i>	
3	Introduction to anatomy and embryology	82	5.1	Neurons	142
	<i>Joanne Murray and Ian Locke</i>				

5.2	Glial cells	151	6.15	Pleura	215
5.3	Cells and structures of the peripheral nervous system	156		<i>Chapter summary</i>	218
5.4	Structural organization of the nervous system	162		<i>Further reading</i>	218
5.5	Functional divisions of the peripheral nervous system	168		<i>Discussion questions</i>	219
5.6	Sensory reception in the peripheral nervous system	171	7	Digestive system	220
5.7	Endocrine function and control in the central nervous system	177		<i>Tony Warford and Tony Madgwick</i>	
5.8	Tumours of the central nervous system	180	7.1	General structural arrangement	221
5.9	Pathological processes in the peripheral nervous system	182	7.2	Oral cavity	225
	<i>Chapter summary</i>	186	7.3	Oesophagus	231
	<i>Further reading</i>	186	7.4	Stomach	232
	<i>Discussion questions</i>	186	7.5	Small intestine	234
6	Lungs: the cells of the respiratory system	187	7.6	Large intestine	240
	<i>Behdad Shambayati and Andrew Evered</i>		7.7	The intestine and cancer	243
6.1	Respiratory epithelium	187		<i>Chapter summary</i>	243
6.2	Nasal cavity	190		<i>Further reading</i>	244
6.3	Paranasal sinuses	192		<i>Discussion questions</i>	245
6.4	Nasopharynx	194	8	Cells and microbial flora of the gastrointestinal tract	246
6.5	Larynx	194		<i>Kathy Nye</i>	
6.6	Trachea	196	8.1	General principles and the development of the normal microflora	247
6.7	Lungs	199	8.2	Regions of the GI tract and their normal microbial flora	250
6.8	Bronchial tree	200	8.3	Functions of the normal flora	254
6.9	Bronchioles	207	8.4	Normal flora in disease states	257
6.10	Respiratory bronchioles	211	8.5	Therapeutic manipulation of the normal flora	259
6.11	Alveolar ducts	211		<i>Chapter summary</i>	261
6.12	Alveoli	211		<i>Further reading</i>	261
6.13	Macrophages	214		<i>Discussion questions</i>	262
6.14	Blood vessels	215	9	Cells of the cardiovascular and lymphatic systems	263
				<i>Andrew Blann</i>	
			9.1	Overview of the cardiovascular and lymphatic systems	263

9.2 Cells of the cardiovascular and lymphatic systems	264	12 Kidney and urinary tract	349
9.3 Vessels of the cardiovascular and lymphatic systems	275	<i>Guy Orchard, David Muskett and Brian Nation</i>	
9.4 Organs of the cardiovascular and lymphatic systems	282	12.1 Embryology	352
9.5 Pathology of the cardiovascular and lymphatic systems	290	12.2 Kidney function	352
Chapter summary	294	12.3 Kidney structure	354
Further reading	294	12.4 Microscopic structural features	356
Discussion questions	295	12.5 Renal interstitium	367
10 Musculoskeletal system	296	12.6 Ureters	368
<i>Suha Deen</i>		12.7 Urinary bladder	369
10.1 Skeletal muscle	297	12.8 Urethra	371
10.2 Bone and cartilage	308	12.9 Urinary system disease	371
10.3 Cartilage	320	12.10 Kidney transplantation	376
Chapter summary	321	Chapter summary	377
Further reading	322	Further reading	377
Discussion questions	322	Discussion questions	378
11 Liver	323	13 Reproductive cells and gametogenesis	379
<i>Anne Rayner and Alberto Quaglia</i>		<i>Andrew Evered and Behdad Shambayati</i>	
11.1 Segmental anatomy, blood supply and biliary drainage	325	13.1 The reproductive system—an overview	380
11.2 Microscopic structure	329	13.2 Gametogenesis	382
11.3 Ultrastructure of the hepatocyte	332	13.3 Testes and spermatogenesis	387
11.4 Other cells seen in the liver	334	13.4 Ovaries and oogenesis	394
11.5 Bile ducts	336	13.5 Cells of the male reproductive tract	397
11.6 Liver development	336	13.6 Cells of the female reproductive tract	400
11.7 Liver regeneration	337	13.7 Cells of the external genitalia	408
11.8 Liver pathology	338	Chapter summary	411
11.9 Classification of liver disease	343	Further reading	412
11.10 Gall bladder	344	Discussion questions	412
11.11 Pancreas	346	14 Cells of the endocrine system	414
Chapter summary	347	<i>Judy Brincat</i>	
Further reading	348	14.1 Hormone action and control mechanisms	415
Discussion questions	348	14.2 Pituitary gland	417
		14.3 Pineal gland	425
		14.4 Thyroid gland	428

14.5	Parathyroid glands	432	15.3	Structure of the epidermis	455
14.6	Adrenal glands	434	15.4	Cells of the epidermis	459
14.7	Endocrine pancreas	441	15.5	Basement membrane zone	464
14.8	Gastrointestinal endocrine system	444	15.6	Structures of the dermis	466
14.9	Respiratory endocrine system	446	15.7	Subcutis (subcutaneous fat)	477
14.10	Endocrine cells of the kidney	447	15.8	Breast tissue	478
	Chapter summary	448	15.9	Stains, antibodies and descriptive terms used in dermatopathology: a brief overview	482
	Further reading	449		Chapter summary	484
	Discussion questions	449		Further reading	485
	Acknowledgements	450		Discussion questions	486
15	Skin and breast	451		Glossary	487
	Guy Orchard			Index	495
15.1	Structure of the skin	453			
15.2	Embryology of the skin	454
