

Contents

1	What are sexes, and why are there sexes?	1
1.1	Meiotic sex	3
1.1.1	What is sex?	3
1.1.2	What use is sex?	5
1.1.2a	The costs of sex	6
1.1.2b	The benefits of sex	6
1.2	Mating types, sexes, and genders	9
1.2.1	What uses are primary mating types?	11
1.2.1a	Inbreeding avoidance	11
1.2.1b	Sex-advantage enhancement	11
1.2.1c	Control over organelle transmission	12
1.2.1d	Developmental switch	12
1.2.2	Frequency-dependent selection on mating types	13
1.2.3	Sexes and sex-ratio selection	14
1.3	Sex roles, sexual conflicts, and sexual selection	15
1.4	Sex determination <i>versus</i> sex differentiation	16
2	The diversity of sexual cycles	18
2.1	Sexual cycles among eukaryotes	18
2.1.1	Haploid versus diploid phases	18
2.1.1a	Is diploidy better?	20
2.1.1b	What maintains haplo-diplontic cycles?	23
2.1.2	(An)isogamy: from mating types to sexes	24
2.1.3	Modes and timing of sex determination	26
2.1.4	Haplo-genotypic sex determination (H-GSD)	28
2.1.5	Diplo-genotypic sex determination (D-GSD)	28
2.1.6	Epigenetic sex differentiation	29
2.1.6a	Simultaneous hermaphroditism	29
2.1.6b	Sequential hermaphroditism	30
2.1.6c	Environmental sex determination (ESD)	31
2.1.6d	Social sex determination	32
2.1.6e	Maternal control	32
2.1.6f	Parasite manipulation	33
2.1.7	Self-incompatibility systems and induction types	34
2.1.8	Evolutionary paths among sex-determination modes	34
2.2	The eukaryote tree of sex	36

3	Molecular mechanisms of sex determination	37
3.1	Gene regulatory networks	37
3.1.1	Sex-determination cascades	37
3.1.2	The main actors	38
3.1.2a	Transcription factors	38
3.1.2b	Post-transcriptional regulation	39
3.1.2c	Hormones and pheromones	40
3.1.3	Molecular mechanisms of transitions	40
3.2	Haploid mating-type determination	41
3.2.1	What genes are on MAT loci?	41
3.2.2	Specific systems	43
3.2.2a	Zygomycetes	43
3.2.2b	Ascomycetes	43
3.2.2c	Basidiomycetes	44
3.2.2d	Amoebozoa	47
3.2.2e	Chlorophyta	47
3.2.3	Epigenetic mating-type determination	49
3.2.3a	Mating-type switching	49
3.2.3b	Self-compatibility	50
3.3	Diploid sex determination	51
3.3.1	Sex determination in angiosperms	51
3.3.2	Sex determination in animals	56
3.3.2a	DM-domain genes	57
3.3.2b	Sex determination in vertebrates	61
3.3.2c	Sex determination in Ecdysozoa	64
3.3.3	Molecular mechanisms of sex manipulation by parasites	66
3.4	Self-incompatibility systems and induction types	71
3.4.1	SI systems	71
3.4.1a	SI systems in angiosperms	71
3.4.1b	SI systems in ascidians	73
3.4.2	Induction types	73
3.4.2a	Mating types in ciliates	74
3.4.2b	Induction types in oomycetes	76
4	The quantitative genetics of sex determination	78
4.1	Sex as a threshold trait	78
4.2	Genetic variance	78
4.3	Environmental variance and random effects	80
4.4	Mixed systems	81
4.5	The classical dichotomous view: GSD <i>versus</i> ESD	82
4.6	Norms of reaction	83
4.7	Heritability of sex ratios	84
4.8	G x E interactions	86
4.9	Response to selection	86
4.10	Local adaptations	87

5 The evolution of sex chromosomes	89
5.1 Recombination arrest	90
5.1.1 Ultimate causes	90
5.1.2 Proximate mechanisms	93
5.1.3 Neo-sex chromosomes	95
5.1.4 Pseudo-autosomal regions	97
5.2 Genomic consequences of recombination arrest	97
5.2.1 U and V chromosomes	99
5.2.2 Y and W chromosomes	101
5.2.2a Evolutionary forces on Y and W	101
5.2.2b Empirical evidence	101
5.2.2c Fitness costs to the heterogametic sex	103
5.2.2d Opposing the decay: gene conversion and X-Y recombination	104
5.2.2e Accommodating the decay: dosage compensation	104
5.2.2f Are Y and W chromosomes doomed to extinction?	107
5.2.3 X and Z chromosomes	108
5.2.3a Evolutionary forces on X and Z	108
5.2.3b Empirical evidence	111
5.3 Heterogeneity between lineages	113
6 Evolutionary correlates of sex-determination systems	115
6.1 Sex determination and polyploidy	115
6.2 Sex determination and parthenogenesis	116
6.3 Sex determination and sex allocation	117
6.3.1 Parental control and genetic conflicts over sex allocation	118
6.3.2 Meiotic-drive sex chromosomes and sex-ratio distorters	120
6.4 Sexual dimorphism and sexual selection	124
6.4.1 Are sex chromosomes attractors for sexually selected traits?	124
6.4.2 Is female heterogamety more conducive to flashy males?	125
6.5 Sex determination and speciation	126
6.5.1 Haldane's rule	127
6.5.2 Darwin's corollary	130
6.5.3 Large X-effects	130
6.5.4 Pre-mating isolation	130
6.5.5 Sex chromosome introgression in hybrid zones	131
6.5.6 What about systems lacking differentiated sex chromosomes?	132
7 Transitions among sex-determination systems	133
7.1 A diversity of transitions	133
7.2 Evolutionary causes	134
7.2.1 Neutral processes	134
7.2.2 Fitness differences between sex phenotypes	135
7.2.2a SA-driven transitions	135
7.2.2b Mutation-load driven transitions	136

7.2.3 Sex-ratio selection	137
7.2.3a Shifting optimal sex ratios	137
7.2.3b Environmentally driven transitions	138
7.2.3c Genetic conflicts	138
7.3 Open questions on SD transitions	144
7.3.1 Why do turnover rates differ between lineages?	144
7.3.2 Are some SD systems more labile or some transitions more likely?	145
7.3.3 Are some chromosome pairs particularly good at sex?	147
7.4 Perspectives on SD transitions	147
