PART 1 An overview of signalling

1

1 An introduction to cellular signalling	3
1.1 Introduction	3
1.2 The main principles of cell signalling	5
1.3 Change is the key	7
1.4 What makes a good signal?	9
1.5 Different ways in which cells signal to each other	11
1.6 Cell-to-cell signalling	15
1.7 Amplification and physical architectures	18
1.8 Coordination of signalling	21
1.9 Domains and modules	24
1.10 Oncogenes	29
Summary	30
What next?	30
Further reading	31
2 Pathways are the key to signalling	35
2.1 Introduction	35
2.2 Simplified examples of signalling pathways	38
Summary	44
What next?	44
Further reading	45
3 A look at some of the history and techniques of cell signalling	46
3.1 A brief history	46
3.2 A brief look at some techniques	51
Summary	60
What next?	61
Further reading	62

PART 2 Components that comprise signalling pathways**67****4 Extracellular signals: hormones, cytokines and growth factors 69**

4.1	Introduction	70
4.2	Hormones	71
4.3	Plant hormones	77
4.4	Cytokines	81
4.5	Growth factors	87
4.6	Neurotransmitters	89
4.7	ATP as an extracellular signal	90
4.8	Pheromones	91
	Summary	93
	What next?	93
	Further reading	94

5 Detection of extracellular signals: the role of receptors 97

5.1	Introduction	98
5.2	Types of receptors	100
5.3	Ligand binding to their receptors	112
5.4	Receptor sensitivity and receptor density	117
	Summary	122
	What next?	123
	Further reading	123

6 Protein phosphorylation, kinases and phosphatases 126

6.1	Introduction	127
6.2	Serine/threonine kinases	133
6.3	Tyrosine kinases	153
6.4	Mitogen-activated protein kinases	159
6.5	Histidine phosphorylation	162
6.6	Phosphatases	164
6.7	Other covalent modifications	168
6.8	Ubiquitin-proteasome system	170
	Summary	173
	What next?	175
	Further reading	175

7 Cyclic nucleotides, cyclases and G proteins 182

7.1	Introduction	183
7.2	cAMP	183
7.3	Adenylyl cyclase	187
7.4	Adenylyl cyclase control and the role of G proteins	190

7.5	Other roles of the heterotrimeric G proteins	198
7.6	Guanylyl cyclase	199
7.7	Phosphodiesterases	203
7.8	Compartmentalization of nucleotide signalling	207
7.9	The GTPase superfamily: functions of monomeric G proteins	209
	Summary	217
	What next?	218
	Further reading	218
8	Inositol phosphate metabolism and roles of membrane lipids	222
8.1	Introduction	222
8.2	Events at the membrane	224
8.3	The breakdown of the inositol phosphate lipids	227
8.4	Inositol 1,4,5-trisphosphate and its fate	230
8.5	The role of diacylglycerol	236
8.6	Inositol phosphate metabolism at the nucleus	237
8.7	Other lipids involved in signalling	238
8.8	Related lipid derived signalling molecules	245
	Summary	246
	What next?	247
	Further reading	247
9	Intracellular calcium ions: control of their concentrations and roles in signalling	251
9.1	Introduction	252
9.2	Calmodulin	258
9.3	The plasma membrane and its role in calcium ion concentration maintenance	262
9.4	Intracellular stores	265
9.5	Gradients, waves and oscillations	273
9.6	Sphingosine-1-phosphate	280
9.7	Cyclic ADP-ribose	281
9.8	Nicotinate adenine-dinucleotide phosphate	282
9.9	Fluorescence detection and confocal microscopy	282
	Summary	284
	What next?	285
	Further reading	286
10	Reactive oxygen species, reactive nitrogen species and redox signalling	290
10.1	Introduction	290
10.2	Nitric oxide	292

10.3	Reactive oxygen species: superoxide and hydrogen peroxide	300
10.4	Interactions of ROS and RNS	307
10.5	Hydrogen sulfide	308
10.6	Redox signalling and molecular mechanisms of hydrogen peroxide signalling	308
10.7	Measuring ROS, RNS and H ₂ S	311
10.8	Carbon monoxide	313
	Summary	313
	What next?	314
	Further reading	314

PART 3 Selected examples of signalling pathways and events 319

11	Insulin and the signal transduction cascades it invokes	321
11.1	The insulin signalling system	321
	Summary	336
	What next?	337
	Literature link	337
	Further reading	338
12	Perception of the environment	340
12.1	Introduction	340
12.2	Photodetection in the eye	341
12.3	Other environment perception systems	349
	Summary	352
	What next?	352
	Literature link	353
	Further reading	354
13	Signalling in development and for the regulation of gene expression	356
13.1	Introduction	357
13.2	Transcription factors	359
13.3	Transforming growth factor β	363
13.4	Notch receptor signalling	366
13.5	Hedgehog signalling	368
13.6	Wnt signalling	371
13.7	Toll-like receptor signalling	373
	Summary	376
	What next?	376
	Literature link	377
	Further reading	378

14 Life, death and apoptosis	382
14.1 Introduction	382
14.2 An overview of apoptosis	383
14.3 Caspases	384
14.4 The intrinsic pathway	387
14.5 The extrinsic pathway	391
Summary	394
What next?	395
Literature link	395
Further reading	396

PART 4 Final thoughts 399

15 Cell signalling: importance, complexity and the future	401
15.1 Introduction	401
15.2 Steady states, thresholds and signalling	402
15.3 Specificity, subtlety and crosstalk	403
15.4 Moonlighting proteins	404
15.5 Longer-term effects	405
15.6 Drug discovery and the future for cell signalling manipulation	406
15.7 The future	408
Further reading	409
INDEX	411
