

CONTENTS IN FULL

8 Transcription

Abbreviations

1 Genomes and the flow of biological information

Introduction

- 1.1 The roots of biology
- 1.2 The genome: a working blueprint for life
- 1.3 Bringing genes to life: gene expression
- 1.4 Regulating gene expression
- 1.5 Cellular infrastructure and gene expression
- 1.6 Expression of the genome
- 1.7 Evolution of the genome and the tree of life

2 Biological molecules

Introduction

- 2.1 Atoms, molecules, and chemical bonds
- 2.2 Life in aqueous solution
- 2.3 Non-covalent interactions
- 2.4 Nucleotides and nucleic acids
- 2.5 The structure of DNA
- 2.6 Chemical properties of RNA
- 2.7 RNA folding and structure
- 2.8 The RNA world and its role in the evolution of modern-day life
- 2.9 Fundamentals of protein structure
- 2.10 Protein folding
- 2.11 Protein folds
- 2.12 Protein-DNA interactions
- 2.13 Sugars and carbohydrates
- 2.14 Lipids
- 2.15 Chemical modification in biological regulation

3 The chemical basis of life

Introduction

- 3.1 Thermodynamic rules in biological systems
- 3.2 Binding equilibria and kinetics
- 3.3 Binding processes in biology
- 3.4 Enzyme catalysis
- 3.5 Enzyme kinetics

4 Chromosome structure and function

Introduction

- 4.1 Organization of chromosomes
- 4.2 The cell cycle and chromosome dynamics

120

4.3	Packaging chromosomal DNA	122
4.4	Variation in chromatin structure	129
4.5	Covalent modifications of histones	131
4.6	Nucleosome-remodeling complexes	137
4.7	DNA methylation	138
4.8	The separation of chromatin domains by boundary elements	142
4.9	Elements required for chromosome function	145
4.10	The centromere	146
4.11	The telomere	151
4.12	Chromosome architecture in the nucleus	154
5	The cell cycle	162
	Introduction	162
5.1	Steps in the eukaryotic cell cycle	162
5.2	Cyclins and Cdk	166
5.3	Regulation of Cdk activity	171
5.4	Cell cycle regulation by Cdk	173
5.5	Regulation of proteolysis by Cdk	175
5.6	Checkpoints: intrinsic pathways that can halt the cell cycle	180
5.7	Extrinsic regulators of cell cycle progression	184
5.8	The cell cycle and cancer	186
5.9	The bacterial cell cycle	189
6	DNA replication	199
	Introduction	199
6.1	Overview of DNA replication	199
6.2	DNA polymerases: structure and function	207
6.3	DNA polymerases: fidelity and processivity	210
6.4	Specialized polymerases	211
6.5	DNA helicases: unwinding of the double helix	213
6.6	The sliding clamp and clamp loader	218
6.7	Origins and initiation of DNA replication	221
6.8	Leading and lagging strand synthesis	224
6.9	The replication fork	227
6.10	Termination of DNA replication	231
6.11	The end-replication problem and telomerase	233
6.12	Chromatin replication	235
6.13	Regulation of initiation of replication in <i>E. coli</i>	238
6.14	Regulation of replication initiation in eukaryotes	241
7	Chromosome segregation	249
	Introduction	249
7.1	The stages of mitosis	249
7.2	Chromosome condensation and cohesion	251
7.3	The mitotic spindle	257
7.4	Prometaphase and metaphase	263
7.5	Anaphase: an irreversible step in chromosome segregation	269
7.6	The completion of mitosis and cytokinesis	276

7.7	Meiosis: generating haploid gametes from diploid cells	278
7.8	Chromosome segregation in bacteria	285
8	Transcription	296
	Introduction	296
8.1	Overview of transcription	296
8.2	RNA polymerase core enzyme	299
8.3	Promoter recognition in bacteria and eukaryotes	302
8.4	Initiation of transcription and transition to an elongating complex	313
8.5	Transcription elongation	319
8.6	Transcription termination	324
9	Regulation of transcription	330
	Introduction	330
9.1	Principles of transcription regulation	330
9.2	DNA-binding domains in proteins that regulate transcription	335
9.3	Mechanisms for regulating transcription initiation in bacteria	340
9.4	Competition between cI and Cro and control of the fate of bacteriophage lambda	345
9.5	Regulation of transcription termination in bacteria	351
9.6	Regulation of transcription initiation and elongation in eukaryotes	355
9.7	Combinatorial regulation of eukaryotic transcription	360
9.8	The role of signaling cascades in the regulation of transcription	363
9.9	Gene silencing	365
10	RNA processing	375
	Introduction	375
10.1	Overview of RNA processing	375
10.2	tRNA and rRNA processing	378
10.3	tRNA and rRNA nucleotide modifications	383
10.4	mRNA capping and polyadenylation	385
10.5	RNA splicing	388
10.6	Eukaryotic mRNA splicing by the spliceosome	393
10.7	Exon definition and alternative splicing	399
10.8	RNA editing	405
10.9	Degradation of normal RNAs	410
10.10	Degradation of foreign and defective RNAs	413
10.11	RNA-binding domains in proteins	416
11	Translation	421
	Introduction	421
11.1	Overview of translation	421
11.2	tRNA and the genetic code	423
11.3	Aminoacyl-tRNA synthetases	426
11.4	Structure of the ribosome	431
11.5	The translation cycle: the ribosome in action	435
11.6	Protein factors critical to the translation cycle	440
11.7	Translation initiation – shared features in bacteria and eukaryotes	443

11.8	Bacterial translation initiation	444
11.9	Eukaryotic translation initiation	448
11.10	Translation elongation: decoding, peptide bond formation, and translocation	450
11.11	Translation termination, recycling, and reinitiation	454
11.12	Ribosome rescue in bacteria and eukaryotes	460
11.13	Recoding: programmed stop codon read-through and frameshifting	466
11.14	Antibiotics that target the ribosome	472
12	Regulation of translation	479
	Introduction	479
12.1	Global regulation of initiation in bacteria and eukaryotes	479
12.2	Regulation of initiation by <i>cis</i> acting sequences in the 5' untranslated region in bacteria and eukaryotes	482
12.3	Regulation of translation through <i>cis</i> acting sequences in the 3' UTR in eukaryotes	489
12.4	Viral corruption of the translational machinery	492
13	Regulatory RNAs	498
	Introduction	498
13.1	Overview of regulatory RNAs	501
13.2	Bacterial base-pairing sRNAs	503
13.3	Eukaryotic sRNAs: miRNAs, siRNAs, and rasiRNAs	506
13.4	Processing of eukaryotic sRNAs	507
13.5	Loading of Argonaute family proteins with eukaryotic sRNAs	516
13.6	Gene silencing by small eukaryotic RNAs	519
13.7	Viral defense role of bacterial, archaeal, and eukaryotic sRNAs	522
13.8	RNA-mediated regulation in <i>cis</i>	527
13.9	Protein-binding regulatory RNAs	530
13.10	Long intergenic non-coding RNAs	532
14	Protein modification and targeting	539
	Introduction	539
14.1	Chaperone-assisted protein folding	539
14.2	Targeting of proteins throughout the cell	544
14.3	Post-translational cleavage of the polypeptide chain	548
14.4	Lipid modification of proteins	550
14.5	Glycosylation of proteins	557
14.6	Protein phosphorylation, acetylation, and methylation	560
14.7	Protein modification by nucleotides	567
14.8	Direct chemical modification of proteins	570
14.9	Ubiquitination and sumoylation of proteins	572
14.10	Protein degradation	579
15	Cellular responses to DNA damage	587
	Introduction	587
15.1	Types of DNA damage	588
15.2	Post-replication mismatch repair	592
15.3	Repair of DNA damage by direct reversal	594

15.4	Repair of DNA damage by base excision repair	595
15.5	Nucleotide excision repair of bulky lesions	596
15.6	Translesion DNA synthesis	599
15.7	The DNA damage response	601
15.8	The DNA damage response in bacteria	605
15.9	The DNA damage response in eukaryotes	607
15.10	DNA damage and cell death in mammalian cells	618
16	Repair of DNA double-strand breaks and homologous recombination	626
	Introduction	626
16.1	An overview of DNA double-strand break repair and homologous recombination	626
16.2	Double-strand break repair by NHEJ	628
16.3	Homology-directed repair of double-strand breaks	631
16.4	Generation of single-stranded DNA by helicases and nucleases	632
16.5	The mechanism of DNA strand pairing and exchange	637
16.6	Gene conversion through homology-directed repair	639
16.7	Repair of damaged replication forks by homology-directed repair	645
16.8	Homologous recombination	647
16.9	Chromosome rearrangements during aberrant repair and recombination	659
17	Mobile DNA	668
	Introduction	668
17.1	Transposable elements: overview	668
17.2	An overview of DNA-only transposons	675
17.3	DNA-only cut-and-paste transposition	676
17.4	DNA-only nick-and-paste transposition	681
17.5	DNA cut-and-paste transposition in adaptive immunity	684
17.6	Retrotransposons	688
17.7	LTR retrotransposons	689
17.8	Non-LTR retrotransposons	693
17.9	Control of transposition	701
17.10	CSSR: overview	706
17.11	CSSR systems that control gene expression	710
17.12	CSSR conversion of DNA dimers to monomers	713
17.13	Bacteriophage lambda integration and excision	715
18	Genomics and genetic variation	726
	Introduction	726
18.1	Genome sequences and sequencing projects	727
18.2	Finding functions in a genome	730
18.3	Functional genomics	734
18.4	The ENCODE project	739
18.5	The evolving genome: evolutionary forces	742
18.6	The evolving genome: mechanisms of variation	744
18.7	Gene duplication and divergence of gene function	749
18.8	Changes in chromosome structure and copy number variation	752

18.9	Epigenetics and imprinting	754
18.10	Human genetic diseases: finding disease loci	756
18.11	Human genetics: impacts and implications	764
19	Tools and techniques in molecular biology	775
	Introduction	775
19.1	Model organisms	776
19.2	Cultured cells and viruses	784
19.3	Amplification of DNA and RNA sequences	788
19.4	DNA cloning	793
19.5	Genome manipulation	800
19.6	Detection of biological molecules	810
19.7	Separation and isolation of biological molecules	815
19.8	Identifying the composition of biological molecules	824
19.9	Detection of specific DNA sequences	831
19.10	Detection of specific RNA molecules	836
19.11	Detection of specific proteins	842
19.12	Detection of interactions between molecules	845
19.13	Imaging cells and molecules	853
19.14	Molecular structure determination	863
19.15	Obtaining and analyzing a complete genome sequence	866
	Glossary	878
	Index	901
14	Protein modification and targeting	539
	Introduction	539
14.1	Protein synthesis	540
14.2	Protein folding	544
14.3	Protein modification	548
14.4	Protein targeting	552
14.5	Protein degradation	556
14.6	Protein structure	560
14.7	Protein function	564
14.8	Protein interactions	568
14.9	Protein synthesis and targeting	572
14.10	Protein structure and function	576
14.11	Protein interactions and signaling	580
14.12	Protein synthesis and targeting	584
14.13	Protein structure and function	588
14.14	Protein interactions and signaling	592
14.15	Protein synthesis and targeting	596
15	Cellular responses to DNA damage	587
	Introduction	587
15.1	DNA damage	588
15.2	DNA repair	592
15.3	DNA replication	596
15.4	DNA transcription	600
15.5	DNA translation	604
15.6	DNA recombination	608
15.7	DNA mutation	612
15.8	DNA damage and repair	616
15.9	DNA damage and repair	620
15.10	DNA damage and repair	624
15.11	DNA damage and repair	628
15.12	DNA damage and repair	632
15.13	DNA damage and repair	636
15.14	DNA damage and repair	640
15.15	DNA damage and repair	644
