## Part 1 The Urban Environment 1

|                                                                                    |    |
|------------------------------------------------------------------------------------|----|
| <b>1 The challenges of urban living</b>                                            | 3  |
| Danielle F. Shanahan, Michael W. Strohbach, Paige S. Warren, and Richard A. Fuller |    |
| <b>2 The impact of artificial light on avian ecology</b>                           | 21 |
| Kamiel Spoelstra and Marcel E. Visser                                              |    |
| <b>3 Wild bird feeding (probably) affects avian urban ecology</b>                  | 29 |
| Valentin Amrhein                                                                   |    |

## Part 2 Behaviour and Physiology 39

|                                                                                                                                      |    |
|--------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>4 Attention, habituation, and antipredator behaviour: implications for urban birds</b>                                            | 41 |
| Daniel T. Blumstein                                                                                                                  |    |
| <b>5 Behavioural and ecological predictors of urbanization</b>                                                                       | 54 |
| Anders Pape Møller                                                                                                                   |    |
| <b>6 Acoustic communication in the urban environment: patterns, mechanisms, and potential consequences of avian song adjustments</b> | 69 |
| Diego Gil and Henrik Brumm                                                                                                           |    |
| <b>7 The impact of anthropogenic noise on avian communication and fitness</b>                                                        | 84 |
| Wouter Halfwerk and Hans Slabbekoorn                                                                                                 |    |

- 8 Reproductive phenology of urban birds: environmental cues and mechanisms** 98  
Pierre Deviche and Scott Davies
- 9 The impacts of urbanization on avian disease transmission and emergence** 116  
Lynn B. Martin and Martyna Boruta

---

**Part 3 Evolutionary Processes** 129

- 10 Mechanisms of phenotypic responses following colonization of urban areas: from plastic to genetic adaptation** 131  
Jesko Partecke
- 11 Landscape genetics of urban bird populations** 143  
Kathleen Semple Delaney
- 12 Reconciling innovation and adaptation during recurrent colonization of urban environments: molecular, genetic, and developmental bases** 155  
Alexander V. Badyaev

---

**Part 4 Case Studies** 169

- 13 Acoustic, morphological, and genetic adaptations to urban habitats in the silvereye (*Zosterops lateralis*)** 171  
Dominique A. Potvin, Raoul A. Mulder, and Kirsten M. Parris
- 14 Human-induced changes in the dynamics of species coexistence: an example with two sister species** 181  
Renée A. Duckworth
- 15 The application of signal transmission modelling in conservation biology: on the possible impact of a projected motorway on avian communication** 192  
Erwin Nemeth and Sue Anne Zollinger
- 16 The importance of wooded urban green areas for breeding birds: a case study from Northern Finland** 201  
Jukka Jokimäki, Marja-Liisa Kaisanlahti-Jokimäki, and Pilar Carbó-Ramírez
- Index** 215
