Welcome to Chemistry for the Biosciences

xx

1 Introduction: why biologists need chemistry	1
2 Atoms: the foundations of life	12
3 Compounds and chemical bonding: bringing atoms together	45
4 Molecular interactions: holding it all together	87
5 Moles, concentrations, and dilutions: making sense of chemical numbers	127
6 Organic compounds 1: hydrocarbons as the framework of life	166
7 Organic compounds 2: adding function to the framework of life	192
8 Molecular shape and structure: life in three dimensions	228
9 Isomerism: generating chemical variety	257
10 Biological macromolecules: providing life's infrastructure	293
11 Metals in biology: life beyond carbon	346
12 Chemical reactions 1: bringing molecules to life	373
13 Chemical reactions 2: reaction mechanisms driving the chemistry of life	414
14 Energy: what makes reactions go?	463
15 Equilibria: how far do reactions go?	514
16 Kinetics: what affects the speed of a reaction?	559
17 Acids, bases, and buffer solutions: life in an aqueous environment	606
18 Chemical analysis: characterizing chemical compounds	660
<i>Bibliography</i>	717
<i>Answers to self-check questions</i>	720
<i>Index</i>	728
